#### 1. Product Overview

#### 1.1 Introduction of Innodisk M.2 (P42) 3ME2

Innodisk M.2 (P42) 3ME2 is an NVM Express DRAM-less SSD designed as the standard M.2 form factor with PCIe interface and MLC NAND Flash. M.2 (P42)3ME2 supports PCIe Gen III x2, and it is compliant with NVM 1.3 providing excellent performance. Moreover, it adopts MLC NAND Flash providing high endurance and reliability. With sophisticated error detection and correction (ECC) functions, the module can ensure full End-to-end Data Path Protection that secures the data transmission between host system and NAND Flash.

Innodisk M.2 (P42) 3ME2 is integrated with Marvell controller which provide both low power consumption and efficient heat dissipation, making the SSD optimal for space-constrained IPCs and server boot-up applications.

#### 1.2 Product View and Models

Innodisk M.2 (P42) 3ME2 is available in follow capacities within MLC flash ICs.

M.2 (P42) 3ME2 32GB

M.2 (P42) 3ME2 64GB

M.2 (P42) 3ME2 128GB

M.2 (P42) 3ME2 256GB

Figure 1: Innodisk M.2 (P42) 3ME2 (type 2242)

#### 1.3 PCIe Interface

Innodisk M.2 (P42) 3ME2 supports PCIe Gen III interface and compliant with NVMe 1.3. M.2 (P42) 3ME2 can work under PCIe Gen 1, Gen 2 and Gen 3.

Most of operating systems includes NVMe in-box driver now. For more information about the driver support in each OS, please visit <a href="http://nvmexpress.org/resources/drivers">http://nvmexpress.org/resources/drivers</a>.

# 2. Product Specifications

#### 2.1 Capacity and Device Parameters

M.2 (P42) 3ME2 device parameters are shown in Table 1.

**Table 1: Device parameters** 

Capacity	LBA	User
Сарасто		Capacity(MB)
32GB	62533296	30,533
64GB	125045424	61,057
128GB	250069680	122,104
256GB	500118192	244,198

#### 2.2 Performance

Burst Transfer Rate: 16.0Gbps

**Table 2: Performance** 

Capacity	32GB	64GB	128GB	256GB
Sequential*	450MB/s	890 MB/s	1300 MB/s	1300 MB/s
Read (max.)	430110/5	090 MD/S	1300 MB/S	1300 140/2
Sequential*	50 MB/s	100 MB/s	190 MB/s	240MP/c
Write (max.)	30 MD/S	TOO MD/S	190 MD/S	340MB/s
4KB Random*	18000	36000	47000	F1000
Read (QD32)	18000	36000	47000	51000
4KB Random*	12000	22000	20000	47000
Write (QD32)	12000	22000	29000	47000

Note: \* Performance is based on CrystalDiskMark 5.1.2 with file size 1000MB of Queue Depth 32

#### 2.3 Electrical Specifications

#### 2.3.1 Power Requirement

Table 3: Innodisk M.2 (P42) 3ME2 Power Requirement

Item	Symbol	Rating	Unit
Input voltage	$V_{IN}$	+3.3 DC +- 5%	V

#### 2.3.2 Power Consumption

**Table 4: Power Consumption** 

Mode	Power Consumption (mA)
Read	755 (rms.)
Write	830 (rms.)
Idle	365 (rms.)

<sup>\*</sup> Target: 256GB M.2 (P42) 3ME2

#### 2.4 Environmental Specifications

#### 2.4.1 Temperature Ranges

Table 5: Temperature range for M.2 (P42) 3ME2

Temperature	Range	
Operating	Standard Grade: 0°C to +70°C	
	Industrial Grade:-40°C to +85°C	
Storage	-55°C to +95°C	

#### 2.4.2 Humidity

Relative Humidity: 10-95%, non-condensing

#### 2.4.3 Shock and Vibration

Table 6: Shock/Vibration Testing for M.2 (P42) 3ME2

Reliability	Test Conditions	Reference Standards
Vibration	7 Hz to 2K Hz, 20G, 3 axes	IEC 60068-2-6
Mechanical Shock	Duration: 0.5ms, 1500 G, 3 axes	IEC 60068-2-27

#### 2.4.4 Mean Time between Failures (MTBF)

Table 7 summarizes the MTBF prediction results for various M.2 (P42) 3ME2 configurations. The analysis was performed using a RAM Commander $^{\text{m}}$  failure rate prediction.

- **Failure Rate**: The total number of failures within an item population, divided by the total number of life units expended by that population, during a particular measurement interval under stated condition.
- Mean Time between Failures (MTBF): A basic measure of reliability for repairable items:
   The mean number of life units during which all parts of the item perform within their specified limits, during a particular measurement interval under stated conditions.

Table 7: M.2 (P42) 3ME2 MTBF

Product	Condition	MTBF (Hours)			
Innodisk M.2 (P42) 3ME2	Telcordia SR-332 GB, 25°C	>3,000,000			

#### 2.5 CE and FCC Compatibility

M.2 (P42) 3ME2 conforms to CE and FCC requirements.

#### 2.6 RoHS Compliance

M.2 (P42) 3ME2 is fully compliant with RoHS directive.

#### 2.7 Reliability

Table 8: M.2 (P42) 3ME2 TBW

Parameter		Value				
Read Cycles		Unlimited Read Cycles				
Flash endurance	e	3,000 F	P/E cycles			
Wear-Leveling	Algorithm	Support				
Bad Blocks Mar	nagement	Support				
Error Correct C	ode	Support(LDPC)				
TBW* (Total By	tes Written) Unit:	ТВ				
Capacity	Sequential work	cload	Client workload			
32GB	93.6		38.7			
64GB	187.2	•	77.40			
128GB	374.4		135.49			

<sup>256</sup>GB \* Note:

- 1. Sequential: Mainly sequential write, tested by Vdbench.
- Client: Follow JESD218 Test method and JESD219A Workload, tested by ULINK. (The capacity lower than 64GB client workload is not specified in JEDEC219A, the values are estimated.)

202.85

3. Based on out-of-box performance.

748.8

#### 2.8 Transfer Mode

M.2 (P42) 3ME2 support following transfer mode:

PCIe Gen III 8Gbps

PCIe Gen II 4Gbps

PCIe Gen I 2Gbps

#### 2.9 Pin Assignment

Innodisk M.2 (P42) 3ME2 follows standard M.2 spec, socket 2 key B-M PCIe-based SSD pinout. See Table 9 for M.2 (P42) 3ME2 pin assignment.

Table 9: Innodisk M.2 (P42) 3ME2 Pin Assignment

#### 2.10 Mechanical Dimensions

#### M.2 Type 2242-D2-B-M

Figure 2: Innodisk M.2 (P42) 3ME2 diagram

#### 2.11 Assembly Weight

An Innodisk M.2 (P42) 3ME2 within NAND flash ICs, 64GB's weight is 7 grams approximately.

#### 2.12 Seek Time

Innodisk M.2 (P42) 3ME2 is not a magnetic rotating design. There is no seek or rotational latency required.

#### 2.13 NAND Flash Memory

Innodisk M.2 (P42) 3ME2 uses Multi Level Cell (MLC) NAND flash memory, which is non-volatility, high reliability and high speed memory storage.

# 3. Theory of Operation

#### 3.1 Overview

Figure 2 shows the operation of Innodisk M.2 (P42) 3ME2 from the system level, including the major hardware blocks.

Figure 3: Innodisk M.2 (P42) 3ME2 Block Diagram

Innodisk M.2 (P42) 3ME2 integrates a PCIe Gen III x2 controller and NAND flash memories. Communication with the host occurs through the host interface, using the standard NVM protocol. Communication with the flash device(s) occurs through the flash interface.

#### 3.2 PCIe Gen III x2 Controller

Innodisk M.2 (P42) 3ME2 is designed with 88NV1160, a PCIe Gen IIIx2 controller is compliant with NVMe 1.3, up to 16.0Gbps transfer speed. Also it is compliant with PCIe Gen 1, Gen 2 and Gen 3 specification. The controller supports up to 4 channels for flash interface.

#### 3.3 Error Detection and Correction

Innodisk M.2 (P42) 3ME2 is designed with hardware LDPC ECC engine with hard-decision and soft-decision decoding. Low-density parity-check (LDPC) codes have excellent error correcting performance close to the Shannon limit when decoded with the belief-propagation (BP) algorithm using soft-decision information.

#### 3.4 Wear-Leveling

Flash memory can be erased within a limited number of times. This number is called the **erase cycle limit** or **write endurance limit** and is defined by the flash array vendor. The erase cycle limit applies to each individual erase block in the flash device.

Innodisk M.2 (P42) 3ME2 uses a combination of two types of wear leveling- dynamic and static wear leveling- to distribute write cycling across an SSD and balance erase count of each block, thereby extending flash lifetime.

#### 3.5 Bad Blocks Management

Bad Blocks are blocks that contain one or more invalid bits whose reliability are not guaranteed. The Bad Blocks may be presented while the SSD is shipped, or may develop during the life time of the SSD. When the Bad Blocks is detected, it will be flagged, and not be used anymore. The SSD implement Bad Blocks management, Bad Blocks replacement, Error Correct Code to avoid data error occurred. The functions will be enabled automatically to transfer data from Bad Blocks to spare blocks, and correct error bit.

#### 3.6 Power Cycling

Innodisk's power cycling management is a comprehensive data protection mechanism that functions before and after a sudden power outage to SSD. Low-power detection terminates data writing before an abnormal power-off, while table-remapping after power-on deletes corrupt data and maintains data integrity. Innodisk's power cycling provides effective power cycling management, preventing data stored in flash from degrading with use.

#### 3.7 Garbage Collection

Garbage collection is used to maintain data consistency and perform continual data cleansing on SSDs. It runs as a background process, freeing up valuable controller resources while sorting good data into available blocks, and deleting bad blocks. It also significantly reduces write operations to the drive, thereby increasing the SSD's speed and lifespan.

#### 3.8 End to End Data Path Protection

End-to-End Data Path Protection (ETEP) is a method that ensures the data integrity on every single step from the moment the data enters the SSD from the host until it leaves. ETEP safeguards the data through utilizing error correction code (ECC) at every data transfer point

#### 3.9 Thermal Management

M.2 (P42) 3ME2 has build-in thermal sensor which can detect environment temperature of SSD. In the meantime, firmware will monitor the thermal sensor to prevent any failure of overheating. During extreme temperature, firmware will adjust the data transfer behavior to maintain the SSD's reliable operation.

# 4. Installation Requirements

#### 4.1 M.2 (P42) 3ME2 Pin Directions

Figure 4: Signal Segment and Power Segment

#### 4.2 Electrical Connections for M.2 (P42) 3ME2

M.2 interconnect is based on a 75 position Edge Card connector. The 75 position connector is intended to be keyed so as to distinguish between families of host interfaces and the various Sockets used in general Platforms. M.2(P42) 3ME2 is compliant with M.2 Socket 2 key B-M.

#### 4.3 Device Drive

M.2(P42) 3ME2 is compliant with NVMe 1.3. To make sure NVMe storage devices can work in your system, both operation system and BIOS can support NVMe. Most of OS includes NVMe in-box driver now. For more information about the NVMe driver support in each OS, please visit the website <a href="http://nvmexpress.org/resources/drivers">http://nvmexpress.org/resources/drivers</a>. For BIOS NVMe driver support please contact with your motherboard manufacturers.

# 5. SMART / Health Information

This log page is used to provide SMART and general health information. The information provided is over the life of the controller and is retained across power cycles. More details about Set Features command, please refer to NVM Express 1.3

#### 5.1 Get Log Page(Log Identifier 02h)

Innodisk 3ME2 series SMART / Health Information Log are listed in following table.

Table 10: Get Log Page - SMART / Health Information Log

Bytes	Description								
0	corresponds to a	This field indicates critical warnings for the state of the controller. Each bit critical warning type; multiple bits may be set. If a bit is cleared to '0', then ag does not apply. Critical warnings may result in an asynchronous event host. Bits in this field represent the current associated state and are not							
	Bit	Definition							
	00	If set to '1', then the available spare space has fallen below the threshold.							
	01	If set to '1', then a temperature is above an over temperature threshold or below an under							
	02	If set to '1', then the NVM subsystem reliability has been degraded due to significant media related							
	03	If set to '1', then the media has been placed in read only mode.							
	04	If set to '1', then the volatile memory backup device has failed.  This field is only valid if the							
	07:05	Reserved							
2:1	Kelvin that repres	Composite Temperature: Contains a value corresponding to a temperature in degrees  Kelvin that represents the current composite temperature of the controller and namespace(s)  associated with that controller. The manner in which this value is computed is implementation							
	specific and may not represent the actual temperature of any physical point in the NVM subsystem. The value of this field may be used to trigger an asynchronous event.								

	Warning and critical overheating composite temperature threshold values are reported by the WCTEMP and CCTEMP fields in the Identify Controller data structure.
3	Available Spare: Contains a normalized percentage (0 to 100%) of the remaining spare capacity available.
4	Available Spare Threshold: When the Available Spare falls below the threshold indicated in this field, an asynchronous event completion may occur. The value is indicated as a normalized percentage (0 to 100%).
5	Percentage Used: Contains a vendor specific estimate of the percentage of NVM subsystem life used based on the actual usage and the manufacturer's prediction of NVM life. A value of 100 indicates that the estimated endurance of the NVM in the NVM subsystem has been consumed, but may not indicate an NVM subsystem failure. The value is allowed to exceed 100. Percentages greater than 254 shall be represented as 255. This value shall be updated once per power-on hour (when the controller is not in a sleep state).  Refer to the JEDEC JESD218A standard for SSD device life and endurance measurement techniques.
31:6	Reserved
47:32	Data Units Read: Contains the number of 512 byte data units the host has read from the controller; this value does not include metadata. This value is reported in thousands (i.e., a value of 1 corresponds to 1000 units of 512 bytes read) and is rounded up. When the LBA size is a value other than 512 bytes, the controller shall convert the amount of data read to 512 byte units.  For the NVM command set, logical blocks read as part of Compare and Read operations
	shall be included in this value.
63:48	Data Units Written: Contains the number of 512 byte data units the host has written to the controller; this value does not include metadata. This value is reported in thousands (i.e., a value of 1 corresponds to 1000 units of 512 bytes written) and is rounded up. When the LBA size is a value other than 512 bytes, the controller shall convert the amount of data written to 512 byte units.
	For the NVM command set, logical blocks written as part of Write operations shall be
	included in this value. Write Uncorrectable commands shall not impact this value.
	1
79:64	Host Read Commands: Contains the number of read commands completed by the controller.

95:80	Host Write Commands: Contains the number of write commands completed by the controller.
	For the NVM command set, this is the number of Write commands.
111:96	Controller Busy Time: Contains the amount of time the controller is busy with I/O commands. The controller is busy when there is a command outstanding to an I/O Queue (specifically, a command was issued via an I/O Submission Queue Tail doorbell write and the corresponding completion queue entry has not been posted yet to the associated I/O Completion Queue). This value is reported in minutes.
127:112	Power Cycles: Contains the number of power cycles.
143:128	Power On Hours: Contains the number of power-on hours. This may not include time that the controller was powered and in a non-operational power state.
159:144	Unsafe Shutdowns: Contains the number of unsafe shutdowns. This count is incremented when a shutdown notification (CC.SHN) is not received prior to loss of power.
175:160	Media and Data Integrity Errors: Contains the number of occurrences where the controller detected an unrecovered data integrity error. Errors such as uncorrectable ECC, CRC checksum failure, or LBA tag mismatch are included in this field.
191:176	Number of Error Information Log Entries: Contains the number of Error Information log entries over the life of the controller.
195:192	Warning Composite Temperature Time: Contains the amount of time in minutes that the controller is operational and the Composite Temperature is greater than or equal to the Warning Composite Temperature Threshold (WCTEMP) field and less than the Critical Composite Temperature Threshold (CCTEMP) field in the Identify Controller data structure.  If the value of the WCTEMP or CCTEMP field is 0h, then this field is always cleared to 0h regardless of the Composite Temperature value.
199:196	Critical Composite Temperature Time: Contains the amount of time in minutes that the controller is operational and the Composite Temperature is greater than the Critical Composite Temperature Threshold (CCTEMP) field in the Identify Controller data structure.  If the value of the CCTEMP field is 0h, then this field is always cleared to 0h regardless of the Composite Temperature value.
201:200	Temperature Sensor 1: Contains the current temperature reported by temperature sensor 1.
203:202	Temperature Sensor 2: Contains the current temperature reported by temperature sensor 2.
205:204	Temperature Sensor 3: Contains the current temperature reported by temperature sensor 3.

207:206	Temperature Sensor 4: Contains the current temperature reported by temperature sensor 4.
209:208	Temperature Sensor 5: Contains the current temperature reported by temperature sensor 5.
211:210	Temperature Sensor 6: Contains the current temperature reported by temperature sensor 6.
213:212	Temperature Sensor 7: Contains the current temperature reported by temperature sensor 7.
215:214	Temperature Sensor 8: Contains the current temperature reported by temperature sensor 8.
511:216	Reserved
