## NOTES:

1. Change suffix "B" for U-Bracket form to "C" for enclosed form with cover and fan assembly, e.g. PU651-14C.
2. All models may be operated at no-load without damage. At no load, output voltage fluctuates beyond $5 \%$ due to the burst-mode operation of the control IC in them for energy saving.
3. $600-650 \mathrm{~W}$ for "C" version, or with 30 CFM forced air provided by user for "B" version
4. Ripple and noise is maximum peak-to-peak voltage value measured at output within 20 MHz bandwidth, at rated line voltage and output load ranges, and with a $10 \mu \mathrm{~F}$ tantalum capacitor in parallel with a $0.1 \mu \mathrm{~F}$ ceramic capacitor across the output.
5. Peak output current with $10 \%$ duty cycle maximum for less than 15 seconds, average power not to exceed maximum power rating.
