# 1. Product Overview

## 1.1 Introduction of Innodisk MSATA MINI 3SE

Innodisk mSATA mini 3SE is designed as the standard Mini PCIe form factor with SATA interface, and supports SATA III standard (6.0Gb/s) with excellent performance. The form factor refers to the MO-300 / MO-300B specification which established by JEDEC. Regarding of mechanical interference, Innodisk mSATA mini 3SE absolutely replaces the traditional hard disk and makes personal computer, in any field, smaller and easier.

Innodisk mSATA mini 3SE effectively reduces the booting time of operation system and the power consumption is less than hard disk drive (HDD), and complies with ATA protocol, no additional drives are required, and can be configured as a boot device or data storage device

## 1.2 Product View and Models

Innodisk mSATA mini 3SE is available in follow capacities within SLC flash ICs.

## 1.3 SATA Interface

Innodisk mSATA mini 3SE supports SATA III interface, and compliant with SATA I and SATA II. SATA III interface can work with Serial Attached SCSI (SAS) host system, which is used in server computer. Innodisk mSATA mini 3SE is compliant with Serial ATA Gen 1, Gen 2 and Gen 3 specification (Gen 3 supports 1.5Gbps /3.0Gbps/6.0Gbps data rate).

## 2. Product Specifications

### 2.1 Capacity and Device Parameters

mSATA mini 3SE device parameters are shown in Table 1.

**Table 1: Device parameters**

### 2.4 Environmental Specifications

## 2.4.1 Temperature Ranges

**Table 5: Temperature range for mSATA mini 3SE**

Temperature	Range
Operating	Standard Grade: 0°C to +70°C
	Industrial Grade: -40°C to +85°C
Storage	-55°C to +95°C

## 2.4.2 Humidity

Relative Humidity: 10-95%, non-condensing

## 2.4.3 Shock and Vibration

**Table 6: Shock/Vibration Testing for mSATA mini 3SE**

Reliability	Test Conditions	Reference Standards
Vibration	7 Hz to 2K Hz, 20G, 3 axes	IEC 68-2-6
Mechanical Shock	Duration: 0.5ms, 1500 G, 3 axes	IEC 68-2-27

## 2.4.4 Mean Time between Failures (MTBF)

Table 7 summarizes the MTBF prediction results for various mSATA mini 3SE configurations. The analysis was performed using a RAM Commander™ failure rate prediction.

- **Failure Rate:** The total number of failures within an item population, divided by the total number of life units expended by that population, during a particular measurement interval under stated condition.
- **Mean Time between Failures (MTBF):** A basic measure of reliability for repairable items: The mean number of life units during which all parts of the item perform within their specified limits, during a particular measurement interval under stated conditions.

**Table 7: mSATA mini 3SE MTBF**

Product	Condition	MTBF (Hours)
Innodisk mSATA mini 3SE	Telcordia SR-332 GB, 25°C	>3,000,000

## 2.5 CE and FCC Compatibility

mSATA mini 3SE conforms to CE and FCC requirements.

## 2.6 RoHS Compliance

mSATA mini 3SE is fully compliant with RoHS directive.

## 2.7 Reliability

Parameter	Value
Read Cycles	Unlimited Read Cycles
Wear-Leveling Algorithm	Support
Bad Blocks Management	Support
Error Correct Code	Support

4GB	216 (Sequential write)
8GB	432 (Sequential write)
16GB	864 (Sequential write)
32GB	1728 (Sequential write)

## 2.8 Transfer Mode

mSATA mini 3SE support following transfer mode:

Serial ATA III 6.0Gbps

Serial ATA II 3.0Gbps

Serial ATA I 1.5Gbps

## 2.9 Pin Assignment

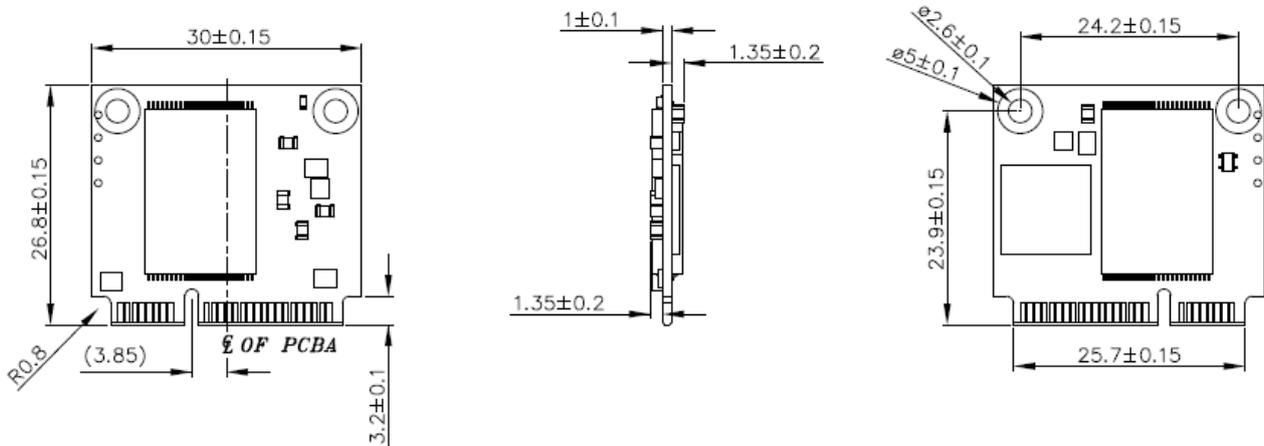

Innodisk mSATA mini 3SE uses a standard SATA pin-out. See Table 8 for mSATA mini 3SE pin assignment.

**2.10 Mechanical Dimensions**

## 2.11 Assembly Weight

An Innodisk mSATA mini 3SE within flash ICs, 32GB's weight is 8 grams approximately.

## 2.12 Seek Time

Innodisk mSATA mini 3SE is not a magnetic rotating design. There is no seek or rotational latency required.

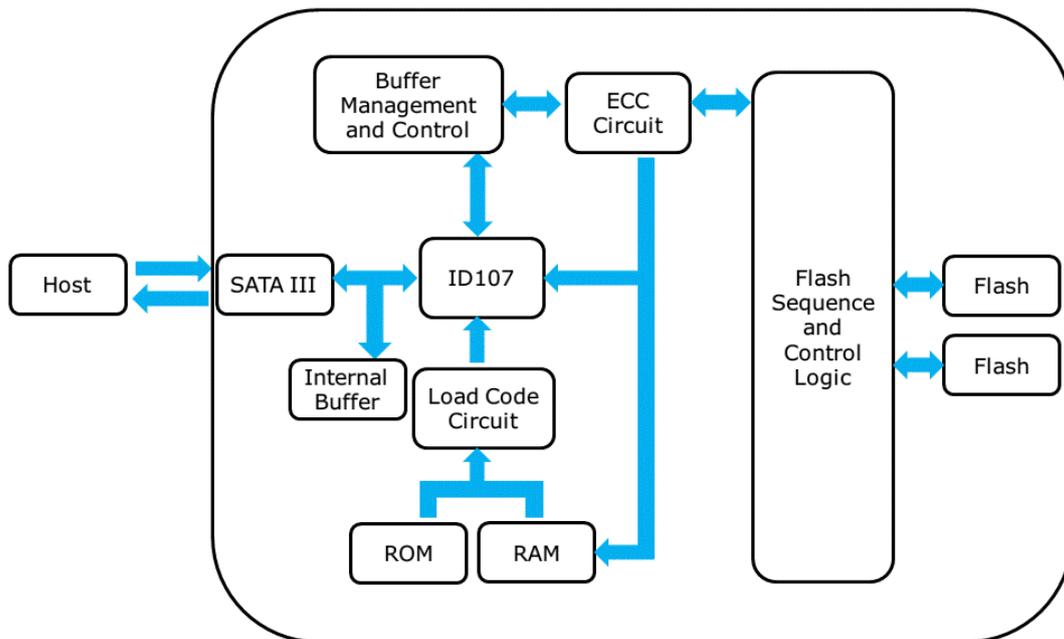

## 2.13 NAND Flash Memory

Innodisk mSATA mini 3SE uses Single Level Cell (SLC) NAND flash memory, which is non-volatility, high reliability and high speed memory storage. There are only two statuses 0 or 1 of one cell. Read or Write data to flash memory for SSD is control by microprocessor.

## 3. Theory of Operation

### 3.1 Overview

Figure 2 shows the operation of Innodisk mSATA mini 3SE from the system level, including the major hardware blocks.

**Figure 2: Innodisk mSATA mini 3SE Block Diagram**

Innodisk mSATA mini 3SE integrates a SATA III controller and NAND flash memories. Communication with the host occurs through the host interface, using the standard ATA protocol. Communication with the flash device(s) occurs through the flash interface.

### 3.2 SATA III Controller

Innodisk mSATA mini 3SE is designed with ID 107, a SATA III 6.0Gbps (Gen. 3) controller. The Serial ATA physical, link and transport layers are compliant with Serial ATA Gen 1, Gen 2 and Gen 3 specification (Gen 3 supports 1.5Gbps/3.0Gbps/6.0Gbps data rate). The controller has 2 channels for flash interface.

### 3.3 Error Detection and Correction

Highly sophisticated Error Correction Code algorithms are implemented. The ECC unit consists of the Parity Unit (parity-byte generation) and the Syndrome Unit (syndrome-byte computation). This unit implements an algorithm that can correct 40 bits per 1024 bytes in an ECC block. Code-byte generation during write operations, as well as error detection during read operation, is implemented on the fly without any speed penalties.

### 3.4 Wear-Leveling

Flash memory can be erased within a limited number of times. This number is called the **erase cycle limit** or **write endurance limit** and is defined by the flash array vendor. The erase cycle limit applies to each individual erase block in the flash device.

Innodisk mSATA mini 3SE uses a static wear-leveling algorithm to ensure that consecutive writes of a specific sector are not written physically to the same page/block in the flash. This spreads flash media usage evenly across all pages, thereby extending flash lifetime.

### 3.5 Bad Blocks Management

Bad Blocks are blocks that contain one or more invalid bits whose reliability are not guaranteed. The Bad Blocks may be presented while the SSD is shipped, or may develop during the life time of the SSD. When the Bad Blocks is detected, it will be flagged, and not be used anymore. The SSD implement Bad Blocks management, Bad Blocks replacement, Error Correct Code to avoid data error occurred. The functions will be enabled automatically to transfer data from Bad Blocks to spare blocks, and correct error bit.

### 3.6 Power Cycling

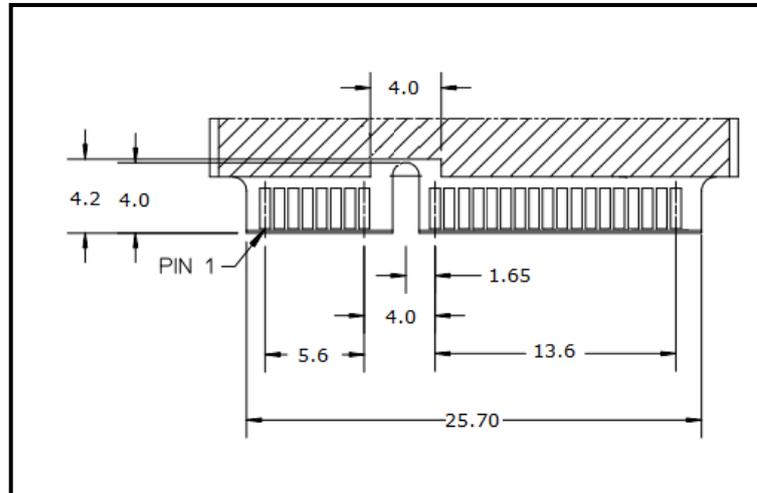

Innodisk's power cycling management is a comprehensive data protection mechanism that functions before and after a sudden power outage to SSD. Low-power detection terminates data writing before an abnormal power-off, while table-remapping after power-on deletes corrupt data and maintains data integrity. Innodisk's power cycling provides effective power cycling management, preventing data stored in flash from degrading with use.

### 3.7 Garbage Collection

Garbage collection is used to maintain data consistency and perform continual data cleansing on SSDs. It runs as a background process, freeing up valuable controller resources while sorting good data into available blocks, and deleting bad blocks. It also significantly reduces write operations to the drive, thereby increasing the SSD's speed and lifespan.

## 4. Installation Requirements

### 4.1 mSATA mini 3SE Pin Directions

**Figure 3: Signal Segment and Power Segment**

### 4.2 Electrical Connections for mSATA mini 3SE

A Serial ATA device may be either directly connected to a host or connected to a host through an adaptor card. The SATA interface has a separate connector for the power supply. Please refer to the pin description for further details.

### 4.3 Device Drive

No additional device drives are required. The Innodisk mSATA mini 3SE can be configured as a boot device.
