1. Product Overview

1.1 Introduction of Innodisk 2.5" PATA SSD 1MG3-P

Innodisk 2.5" PATA SSD 1MG3-P products provide high capacity flash memory Solid State Drive (SSD) that electrically complies with ATA 7 standard, and supports Ultra DMA (0-5) and PIO (0-4) transfer modes. 2.5" PATA SSD 1MG3-P is designed for industrial applications, and supports several features, including NCQ and S.M.A.R.T. Innodisk 2.5" PATA SSD 1MG3-P are designed to have good performance with no latency. It will effectively reduce the boot up time of the operation system. The power consumption is also much lower than a traditional hard disk drive (HDD).

1.2 Product View and Models

Innodisk 2.5" PATA SSD 1MG3-P is available in follow capacities:

2.5" PATA SSD 1MG3-P 8GB	2.5" PATA SSD 1MG3-P 64GB
2.5" PATA SSD 1MG3-P 16GB	2.5" PATA SSD 1MG3-P 128GB
2.5" PATA SSD 1MG3-P 32GB	2.5" PATA SSD 1MG3-P 256GB
2.5" PATA SSD 1MG3-P 512GB

2.4.4 Mean Time between Failures (MTBF)

Table 7 summarizes the MTBF prediction results for various 2.5" PATA SSD 1MG3-P configurations. The analysis was performed using a RAM Commander™ failure rate prediction.

- **Failure Rate:** The total number of failures within an item population, divided by the total number of life units expended by that population, during a particular measurement interval under stated condition.
- **Mean Time Between Failures (MTBF):** A basic measure of reliability for repairable items: The mean number of life units during which all parts of the item perform within their specified limits, during a particular measurement interval under stated conditions.

2.5 CE and FCC Compatibility

2.5" PATA SSD 1MG3-P conforms to CE and FCC requirements. See Appendix for documentation.

2.6 RoHS Compliance

2.5" PATA SSD 1MG3-P is fully compliant with the RoHS directive.

2.5" PATA SSD 1MG3-P support following transfer mode:

- PIO Mode 0~4
- Ultra DMA 0~5

2.9 Pin Assignment

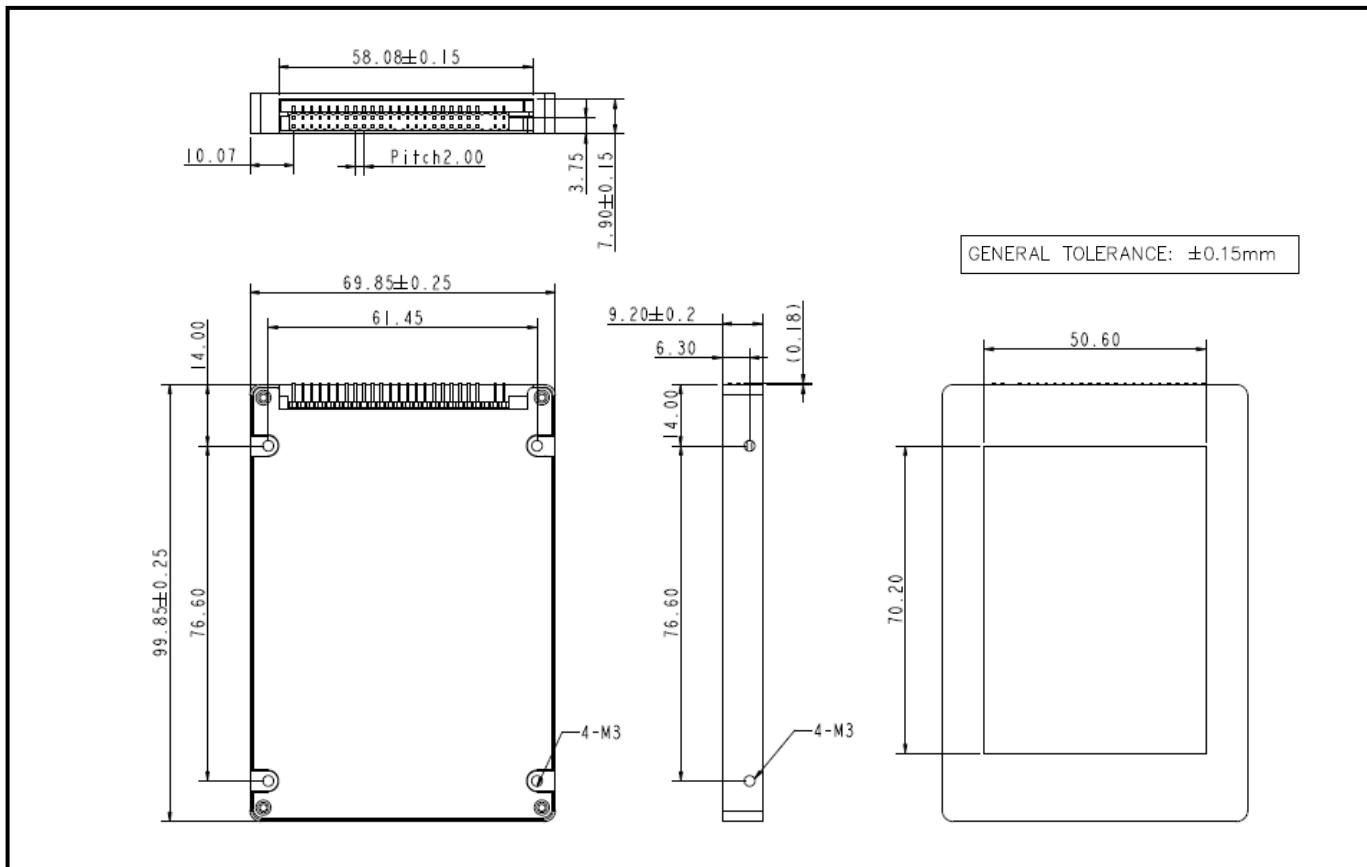

Innodisk 2.5" PATA SSD 1MG3-P uses the standard ATA pin-out. See Table 8 for 2.5" PATA SSD 1MG3-P pin assignment.

2.10 Mechanical Dimensions

2.11 Assembly Weight

The Innodisk 2.5" PATA SSD 1MG3-P with MLC flash ICs weighs approximately 100 grams for 16GB capacities. The total weight of SSD will be less than 135 grams.

2.12 Seek Time

Innodisk 2.5" PATA SSD 1MG3-P does not have magnetic rotating motor so there is no seek or rotational latency for this drive.

2.13 NAND Flash Memory

Innodisk 2.5" PATA SSD 1MG3-P uses Multi-level Cell (MLC) NAND flash memory, which is non-volatility and high reliability.

3. Theory of Operation

3.1 Overview

Figure 2 shows the operation of Innodisk 2.5" PATA SSD 1MG3-P from the system level, including the major hardware blocks.

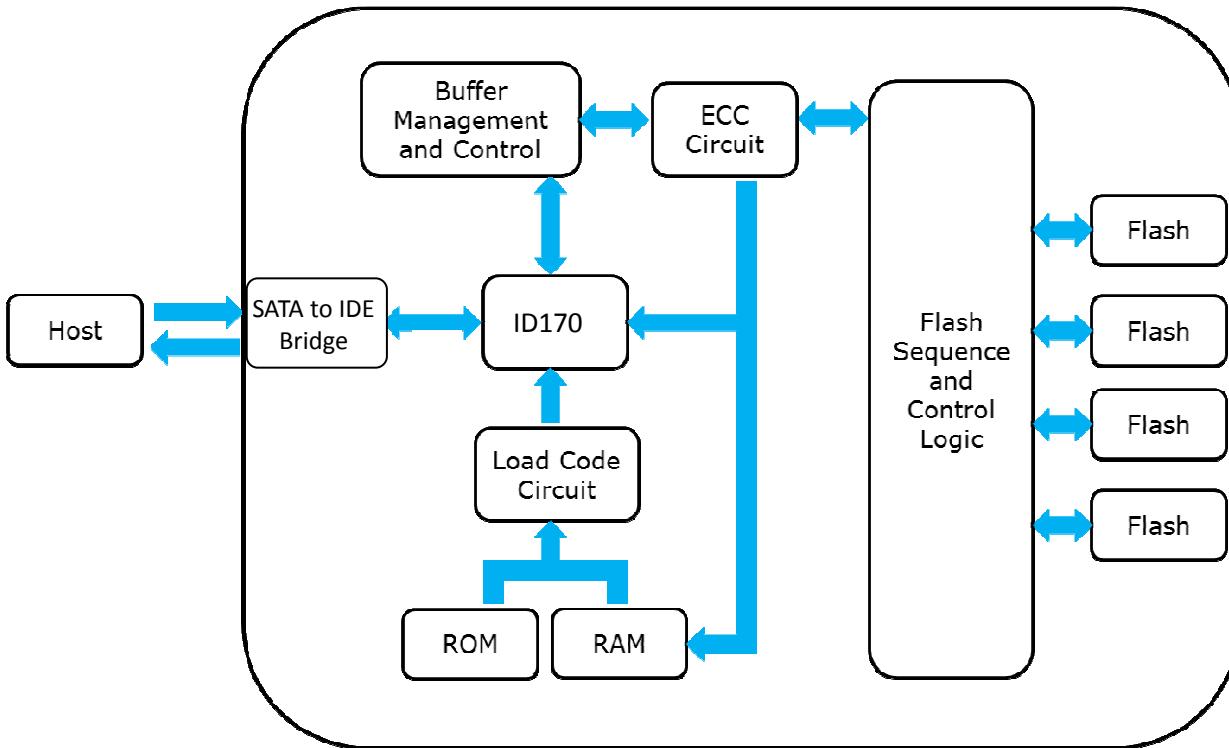

Figure 2: Innodisk FiD 2.5" PATA SSD 1MG3-P Block Diagram

Innodisk 2.5" PATA SSD 1MG3-P integrates a SATA to IDE Bridge, SATA III controller and NAND flash memories. Communication with the host occurs through the host interface using standard ATA protocol. Communication with the flash memory occurs through Innodisk's SATA III controller.

3.2 NAND Flash Controller

Innodisk 2.5" PATA SSD 1MG3-P is designed with ID 170, a SATA III 6.0Gbps (Gen. 3) controller. The controller has a four channel bandwidth for accessing the NAND flash memory.

3.3 Error Detection and Correction

Highly sophisticated Error Correcting Code algorithms are implemented into the controller. The ECC unit consists of the parity unit (parity-byte generation) and the syndrome unit (syndrome-byte computation). These units implement an algorithm that can correct 40 bits per 1024 bytes in an ECC block. Code-byte generation during write operations, as well as error

detection during read operation, is implemented on the fly without any decrease in performance.

3.4 Wear-Leveling

Flash memory can be only be erased a limited number of times. This number is called the **erase cycle limit** or **write endurance limit** and is defined by the NAND flash memory vendor. The erase cycle limit applies to each individual block in the flash device.

Innodisk 2.5" PATA SSD 1MG3-P uses a static wear-leveling algorithm to ensure that consecutive writes of a specific sector are not written physically to the same page/block in the flash. This spreads data usage evenly across all blocks while prolonging the lifecycle of the NAND flash memory.

3.5 Bad Blocks Management

Bad Blocks are blocks that contain one or more invalid bits whose reliability are not guaranteed. Bad Blocks may be present when the SSD is shipped, and may also develop over the lifetime of the SSD. When Bad Blocks are detected, it will be flagged so that block will not be used anymore. Bad Block management, Bad Block replacement, and Error Correcting Code are implemented to avoid storing/accessing data errors. These functions are enabled automatically to transfer data from Bad Blocks to spare blocks, and also correct error bits.

3.6 Power Cycling

Innodisk's power cycling management is a complete data protection system that functions before and after a sudden loss of power to Innodisk's SSD. A Low-power detection circuit terminates data writes before an abnormal power cycle. Once power is restored, table-remapping deletes corrupted data to maintain data integrity. Innodisk's power cycling management also prevents data stored in flash from degrading overtime.

3.7 Garbage Collection

Garbage collection is used to maintain performance consistency by continuously cleaning blocks marked for deletion on SSDs. The garbage collection runs as a background process to have a minimal impact on the controller's resources while combining valid data into available blocks, and erasing blocks marked for deletion. This process also significantly reduces write operations to the drive, thereby increasing the SSD's lifespan.

4. Installation Requirements

4.1 2.5" PATA SSD 1MG3-P Pin Directions

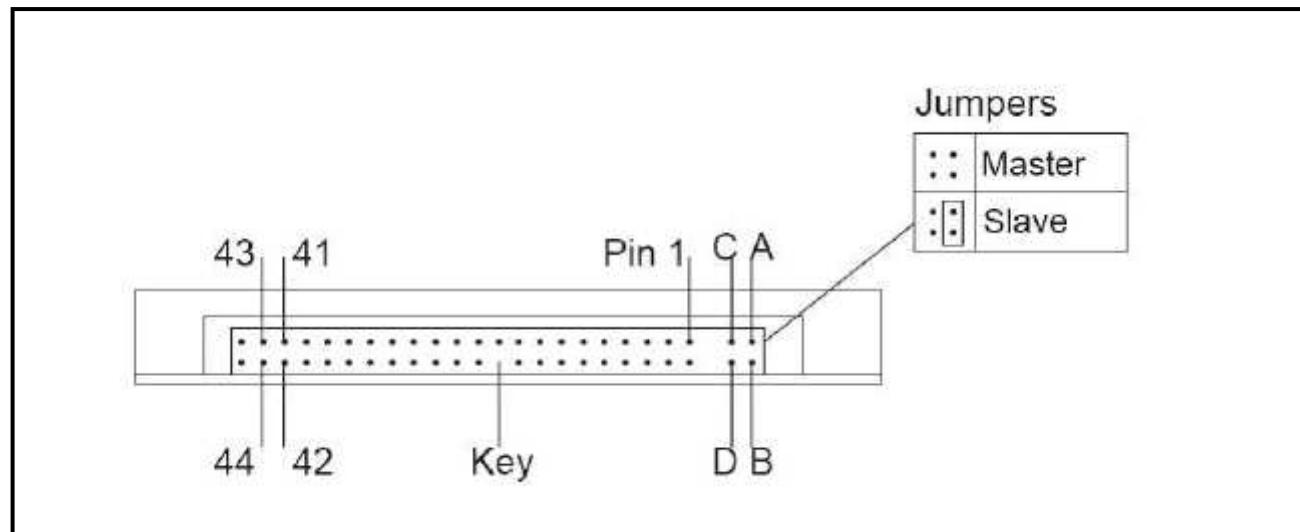

Figure 3: Signal Segment and Power Segment

4.2 Electrical Connections for 2.5" PATA SSD 1MG3-P

2.5" PATA SSD is designed with an IDE 2.00mm pin pitch interface connector and thus can be directly connected to an IDE host or to a female 44pin connector and then to a host. For the connection through a cable, it is suggested that the cable should be no longer than 1MG3-P.
