3TE7 Series

Customer: _____

Customer

Part

Number: _____

Innodisk

Part

Number: _____

Innodisk

Model Name: _____

Date: _____

Innodisk Approver	Customer Approver

Features:

- SATA III
- Kioxia 3D TLC NAND
- CFast 3TE7
- Standard & Wide-temperature
- iPower Guard
- iData Guard
- Dynamic Thermal Management
- Hybrid Write

Power Requirements:

Input Voltage:	3.3V±5%
Max Operating Wattage:	1.8W
Idle Wattage:	0.8W

Performance:

- Sequential Read up to 550 MB/s
- Sequential Write up to 490 MB/s

Reliability:

Capacity	TBW	DWPD
32GB	38	1.08
64GB	75	1.09
128GB	150	1.09
256GB	300	1.09
512GB	600	1.09
1TB	1200	1.09

Data Retention	10 Years
Warranty	3 Years

1. Product Overview

1.1 Introduction of Innodisk CFast 3TE7

Innodisk CFast 3TE7 is characterized by L³ architecture with the latest SATA III (6.0GHz) NAND controller. Innodisk's exclusive L³ architecture is L² architecture multiplied LDPC (Low Density Parity Check). L² (Long Life) architecture is a 4K mapping algorithm that reduces WAF and features a real-time wear leveling algorithm to provide high performance and prolong lifespan with exceptional reliability. Innodisk CFast 3TE7 is designed for industrial field, and supports several standard features, including TRIM, NCQ, and S.M.A.R.T. In addition, Innodisk's exclusive industrial-oriented firmware provides a flexible customization service, making it perfect for a variety of industrial applications.

CAUTION *TRIM must be enabled.*

TRIM enables SSD's controller to skip invalid data instead of moving. It can free up significant amount of resources, extends the lifespan of SSD by reducing erase, and write cycles on the SSD. Innodisk's handling of garbage collection along with TRIM command improves write performance on SSDs.

1.2 Product View and Models

Innodisk CFast 3TE7 is available in follow capacities within 3D TLC flash ICs.

CFast 3TE7 32GB

CFast 3TE7 64GB

CFast 3TE7 128GB

CFast 3TE7 256GB

CFast 3TE7 512GB

CFast 3TE7 1TB

Figure 1: Innodisk CFast 3TE7

1.3 SATA Interface

Innodisk CFast 3TE7 supports SATA III interface, and compliant with SATA I and SATA II. SATA III interface can work with Serial Attached SCSI (SAS) host system, which is used in server computer. Innodisk CFast 3TE7 is compliant with Serial ATA Gen 1, Gen 2 and Gen 3 specification (Gen 3 supports 1.5Gbps /3.0Gbps/6.0Gbps data rate).

1.4 CFast 2.0 Form Factor

CFast 3TE7 compliant with CFast 2.0 standard, it is designed with 7+17 pin connector and is SATA compatible. CFast 2.0 leverage the same connector interface as CFast 1.1 and the SATA-3 interface for higher performance. CFast 3TE7 mechanical dimensions: 42.8mm x 36.4mm x 3.6mm.

2. Product Specifications

2.1 Capacity and Device Parameters

CFast 3TE7 device parameters are shown in Table 1.

Table 1: Device parameters

Capacity	Cylinders	Heads	Sectors	LBA	User Capacity(MB)
32GB	16383	16	63	53742528	26241
64GB	16383	16	63	117231408	57241
				107463888(112-L)	52473
128GB	16383	16	63	234441648	114473
256GB	16383	16	63	468862128	228937
512GB	16383	16	63	937703088	457863
1TB	16383	16	63	1875385008	915715

Note: User capacity is different because of the Die RAID function.

2.2 Performance

Burst Transfer Rate: 6.0Gbps

Table 2: Performance – 64 Layers 3D TLC*

Capacity	Unit	32GB	64GB	128GB	256GB	512GB
Sequential** Read (Q32T1)	MB/s	170	350	550	560	560
Sequential** Write (Q32T1)		35	70	150	290	330
4KB Random** Read (Q32T1)	IOPS	11,000	22,000	44,000	77,000	83,000
4KB Random** Write (Q32T1)		8,000	18,000	36,000	67,000	74,000

Note: * Sequential performance is based on CrystalDiskMark 5.1.2 with file size 1000MB

** Random performance is based on IO meter with Queue Depth 32

Table 3: Performance – 96 Layers 3D TLC*

Capacity	Unit	128GB	256GB	512GB	1TB
Sequential** Read (Q32T1)	MB/s	450	550	550	550
Sequential** Write (Q32T1)		300	480	490	490
Sustained Sequential Read (Avg.)***		330	400	400	400
Sustained Sequential Write (Avg.)***		80	150	290	320
4KB Random** Read (Q32T1)	IOPS	39,000	75,000	83,000	83,000
4KB Random** Write (Q32T1)		20,000	39,000	70,000	72,000

Note: * Performance results are measured in Room Temperature with Out-of-Box devices and may vary depending on overall system setup. In addition, 3TE7 series adopt hybrid mode which enables SLC Cache followed by TLC direct write to strike balance between burst performance and steady overall stability.

Note: ** Performance results are based on CrystalDiskMark 6.0.2 with typical tolerances for range from 1% to 10%. Unit of 4KB items is I.O.P.S.

Note: *** Performance results are based on AIDA 64 v5.98 with block size 1MB of Linear Read & Write Test Item.

Table 4: Performance – 112 Layers 3D TLC*

Capacity	Unit	64GB	128GB	256GB	512GB	1TB
Sequential** Read (Q32T1)	MB/s	270	440	560	550	550
Sequential** Write (Q32T1)		160	220	480	500	490
Sustained Sequential Read (Avg.)***		220	350	420	420	420
Sustained Sequential Write (Avg.)***		40	80	170	310	320
4KB Random** Read (Q32T1)	IOPS	24,000	42,000	81,000	83,000	83,000
4KB Random** Write (Q32T1)		11,000	27,000	48,000	74,000	74,000

Note: * Performance results are measured in Room Temperature with Out-of-Box devices and may vary depending on overall system setup. In addition, 3TE7 series adopt hybrid mode which enables SLC Cache followed by TLC direct

write to strike balance between burst performance and steady overall stability.

Note: ** Performance results are based on CrystalDiskMark 6.0.2 with typical tolerances for range from 1% to 10%.

Unit of 4KB items is I.O.P.S.

Note: *** Performance results are based on AIDA 64 v5.98 with block size 1MB of Linear Read & Write Test Item.

2.3 Electrical Specifications

2.3.1 Power Requirement

Table 5: Innodisk CFast 3TE7 Power Requirement

Item	Symbol	Rating	Unit
Input voltage	V _{IN}	+3.3 DC +- 5%	V

2.3.2 Power Consumption

Table 6: Typical Power Consumption

Mode	Power Consumption (W)
Read	1.6
Write	1.9
Idle	0.9
Boot Up	3.2

* Target: CFast 3TE7 1TB

Note: Current results may vary depending on system components and power circuit design. Please refer to the test report for other capacities.

2.4 Environmental Specifications

2.4.1 Temperature Ranges

Table 7: Temperature range for CFast 3TE7

Temperature	Range
Operating	Standard Grade: 0°C to +70°C
	Industrial Grade: -40°C to +85°C
Storage	-40°C to +85°C

2.4.2 Humidity

Relative Humidity: 10-95%, non-condensing

2.4.3 Shock and Vibration

Table 8: Shock/Vibration Testing for CFast 3TE7

Reliability	Test Conditions	Reference Standards
Vibration	7 Hz to 2K Hz, 20G, 3 axes	IEC 60068-2-6
Mechanical Shock	Duration: 0.5ms, 1500 G, 3 axes	IEC 60068-2-27

2.4.4 Mean Time between Failures (MTBF)

The following table summarizes the MTBF prediction results for various CFast 3TE7 configurations. The analysis was performed using a RAM Commander™ failure rate prediction.

- **Failure Rate:** The total number of failures within an item population, divided by the total number of life units expended by that population, during a particular measurement interval under stated condition.
- **Mean Time between Failures (MTBF):** A basic measure of reliability for repairable items: The mean number of life units during which all parts of the item perform within their specified limits, during a particular measurement interval under stated conditions.

Table 9: CFast 3TE7 MTBF

Product	Condition	MTBF (Hours)
Innodisk CFast 3TE7	Telcordia SR-332 GB, 25°C	>3,000,000

2.5 CE and FCC Compatibility

CFast 3TE7 conforms to CE and FCC requirements.

2.6 RoHS Compliance

CFast 3TE7 is fully compliant with RoHS directive.

2.7 Reliability

Table 10: CFast 3TE7 TBW

Parameter	Value	
Flash endurance	3,000 P/E cycles	
Error Correct Code	Support(LDPC)	
Data Retention	Under 40 C: 10 Years at Initial NAND Status; 1 Year at NAND Life End	
TBW* (Total Bytes Written) Unit: TB		
Capacity	Sequential workload	Client workload
32GB	85	38
64GB	170	75
128GB	341	150
256GB	682	300
512GB	1364	600
1TB	2727	1200

* Note:

1. Sequential: Sequential: Mainly sequential write are estimated by PassMark Burnin Test.
2. Client: Follow JESD218 Test method and JESD219A Workload, tested by ULINK. (The capacity lower than 64GB client workload is not specified in JEDEC219A, the values are estimated.)
3. Based on out-of-box performance.

2.8 Transfer Mode

CFast 3TE7 support following transfer mode:

Serial ATA III 6.0Gbps

Serial ATA II 3.0Gbps

Serial ATA I 1.5Gbps

2.9 Pin Assignment

Innodisk CFast 3TE7 uses a standard SATA pin-out. See following table for CFast 3TE7 pin assignment.

Table 10: Innodisk CFast 3TE7 Pin Assignment

Name	Type	Description
S1	SGND	Ground for signal integrity
S2	A+	Differential Signal Pair A
S3	A-	
S4	SGND	Ground for signal integrity
S5	B-	Differential Signal Pair B
S6	B+	
S7	SGND	Ground for signal integrity

Key and Spacing separate signal and power segments

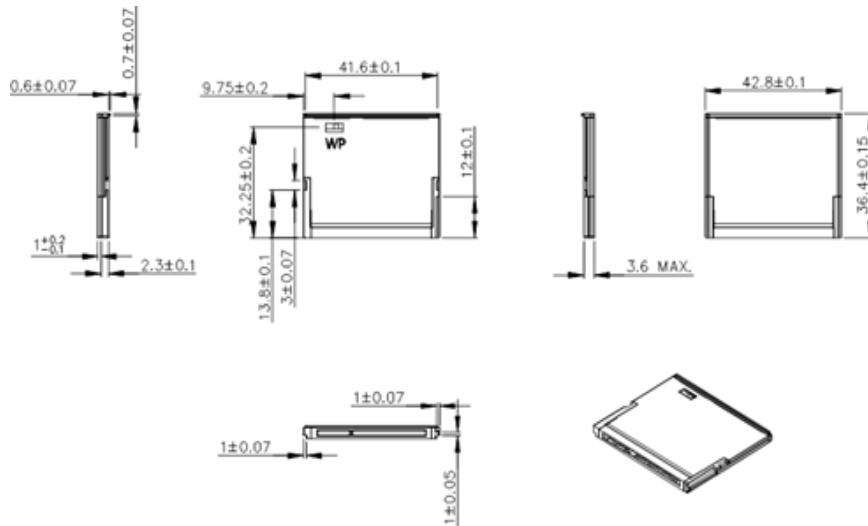

P1	CDI	Card Detect In
P2	PGND	Device Ground
P3	DEVSLP	Device sleep
P4	TBD	Reserved
P5	TBD	Reserved
P6	TBD	Reserved
P7	PGND	Device Ground
P8	TBD	Reserved
P9	LED2	HDDA LED (LED are lighted when P9 low active)
P10	TBD	Reserved
P11	TBD	Reserved

P12	IFDet	GND
P13	PWR	Device Power (3.3V)
P14	PWR	Device Power (3.3V)
P15	PGND	Device Ground
P16	PGND	Device Ground
P17	CDO	Card Detect Out

Table 11: Innodisk CFast 3TE7 LED indicator

LED Color	Function
Green	Power on
	Access

2.10 Mechanical Dimensions

*Write Protect is optional.

2.11 Assembly ~~weight~~

An Innodisk CFast 3TE7 within flash ICs, 128GB's weight is 10 grams approximately.

2.12 Seek Time

Innodisk CFast 3TE7 is not a magnetic rotating design. There is no seek or rotational latency required.

2.13 NAND Flash Memory

Innodisk CFast 3TE7 uses 3D Triple Level Cell (TLC) NAND flash memory, which is non-volatility, high reliability and high speed memory storage.

3 Theory of Operation

3.1 Overview

Figure 3 shows the operation of Innodisk CFast 3TE7 from the system level, including the major hardware blocks.

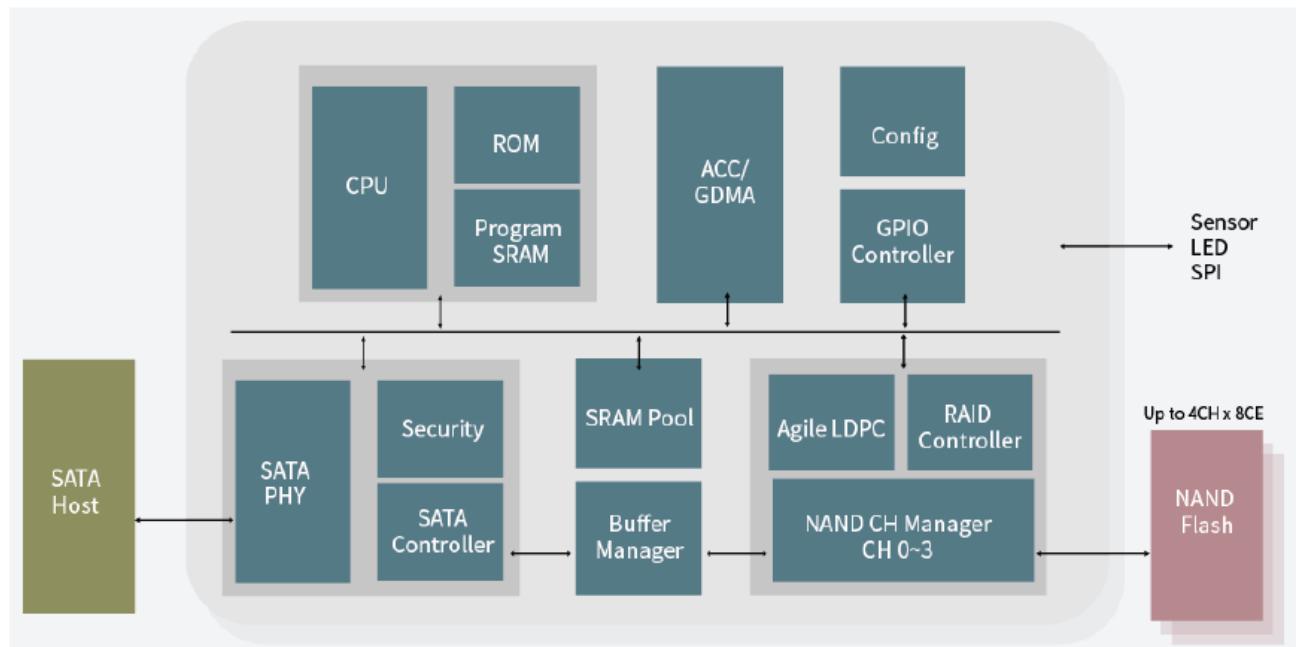

Figure 3: Innodisk CFast 3TE7 Block Diagram

Innodisk CFast 3TE7 integrates a SATA III controller and NAND flash memories. Communication with the host occurs through the host interface, using the standard ATA protocol. Communication with the flash device(s) occurs through the flash interface.

3.2 SATA III Controller

Innodisk CFast 3TE7 is designed with a SATA III 6.0Gbps (Gen. 3) controller. The Serial ATA physical, link and transport layers are compliant with Serial ATA Gen 1, Gen 2 and Gen 3 specification (Gen 3 supports 1.5Gbps/3.0Gbps/6.0Gbps data rate). The controller has 4 channels for flash interface.

3.3 Error Detection and Correction

Innodisk CFast 3TE7 is designed with hardware LDPC ECC engine with hard-decision and Soft-decision decoding. Low-density parity-check (LDPC) codes have excellent error correcting Performance close to the Shannon limit when decoded with the belief-propagation (BP) algorithm using soft-decision information.

3.4 Wear-Leveling

Flash memory can be erased within a limited number of times. This number is called the **erase cycle limit** or **write endurance limit** and is defined by the flash array vendor. The erase cycle limit applies to each individual erase block in the flash device.

Innodisk CFast 3TE7 uses a static wear-leveling algorithm to ensure that consecutive writes of a specific sector are not written physically to the same page/block in the flash. This spreads flash media usage evenly across all pages, thereby extending flash lifetime.

3.5 Bad Blocks Management

Bad Blocks are blocks that contain one or more invalid bits whose reliability are not guaranteed. The Bad Blocks may be presented while the SSD is shipped, or may develop during the life time of the SSD. When the Bad Blocks is detected, it will be flagged, and not be used anymore. The SSD implement Bad Blocks management, Bad Blocks replacement, Error Correct Code to avoid data error occurred. The functions will be enabled automatically to transfer data from Bad Blocks to spare blocks, and correct error bit.

3.6 iData Guard

iData Guard is a comprehensive data protection mechanism that functions before and after a sudden power outage to SSD. Low-power detection terminates data writing before an abnormal power-off, while table-remapping after power-on deletes corrupt data and maintains data integrity. iData Guard provides effective power cycling management, preventing data stored in flash from degrading with use.

3.7 Garbage Collection

Garbage collection is used to maintain data consistency and perform continual data cleansing on SSDs. It runs as a background process, freeing up valuable controller resources while sorting good data into available blocks, and deleting bad blocks. It also significantly reduces write operations to the drive, thereby increasing the SSD's speed and lifespan.

3.8 Trim

The Trim command is designed to enable the operating system to notify the SSD which pages no longer contain valid data due to erases either by the user or operating system itself. During a delete operation, the OS will mark the sectors as free for new data and send a Trim command to the SSD to mark them as not containing valid data. After that the SSD knows not to preserve the contents of the block when writing a page, resulting in less write amplification with fewer writes to the flash, higher write speed, and increased drive life.

3.9 iPower Guard

iPower Guard technology is a set of preventive measures that protect the SSD in an unstable power supply environment. This comprehensive package comprises safeguards for startup and shutdown to maintain device performance and ensure data integrity.

3.10 Die RAID

Die RAID is a controller function which leveraged user capacity to back up the data in NAND flash. Die RAID supported can ensure the user data in the NAND Flash more consistent in certain scenario. Innodisk CFast 3TE7 series is default enable the Die RAID function for the industrial application.

3.11 SLC cache

Table 12: CFast 3TE7 SLC cache

Capacity	64GB	128GB	256GB	512GB	1TB
SLC cache (GB)	3	3	5	9	18
SLC cache (%)	4.6	2.3	1.9	1.7	1.7

3TE7 series adopt hybrid mode which enables SLC Cache followed by TLC direct write to strike balance between burst performance and steady overall stability.

3.12 Thermal Throttling

Thermal throttling is a protective mechanism designed to safeguard components from potential damage caused by excessive temperatures. When an SSD approaches a critical temperature threshold, Innodisk firmware activates the thermal throttling mechanism to regulate the SSD's temperature. Thermal throttling is crucial for SSDs since it prevents drive damage, which could otherwise result in data loss. However, it's worth noting that when thermal throttling is activated, read and write tasks may experience a reduction in speed.

4. Installation Requirements

4.1 CFast 3TE7 Pin Directions

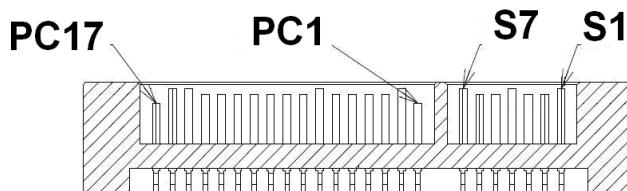

Figure 4: Signal Segment and Power Segment

4.2 Electrical Connections for CFast 3TE7

A Serial ATA device may be either directly connected to a host or connected to a host through an adaptor card. The SATA interface has a separate connector for the power supply. Please refer to the pin description for further details.

4.3 Device Drive

No additional device drives are required. The Innodisk CFast 3TE7 can be configured as a boot device.

5. SMART Feature Set

Innodisk 3TE7 series support the SMART command set and defines some vendor-specific data to report SMART attributes of SSD.

Table 13: SMART command

Value	Command	Value	Command
D0h	Read Data	D5h	Read Log
D1h	Read Attribute Threshold	D6h	Return Status
D2h	Enable/Disable Auto save	D8h	Enable SMART Operations
D3h	Save Attribute Values	D9h	Disable SMART Operations
D4h	Execute OFF-LINE Immediate	DAh	Return Status

5.1 SMART Attributes

Innodisk 3TE7 series SMART data attributes are listed in following table.

Table 14: SMART attribute

Attribute ID (hex)	Value	Raw Attribute Value							Rsv	Attribute Name
05	X	LSB	MSB	00	00	00	00	00	00	Later Bad
09	LSB	LSB	MSB	00	00	00	00	00	00	Power-On hours Count
0C	LSB	LSB	MSB	00	00	00	00	00	00	Drive Power Cycle Count
A3	X	LSB			MSB	00	00	00	00	Total Bad Block Count
A5	LSB	LSB			MSB	00	00	00	00	Max Erase count
A7	LSB	LSB			MSB	00	00	00	00	Avg Erase count
A9	LSB	LSB	00	00	00	00	00	00	00	Device Life
AA	X	LSB	MSB	00	00	00	00	00	00	Spare Block Count
AB	LSB	LSB	MSB	00	00	00	00	00	00	Program fail count
AC	LSB	LSB	MSB	00	00	00	00	00	00	Erase fail count
C0	LSB	LSB	MSB	00	00	00	00	00	00	Unexpected Power Loss Count
C2	LSB			MIN		MAX	00	00	00	Temperature
E5		ID 0	ID 1	ID 2	ID 3	ID 4	ID 5			Flash ID
EB			MSB	LSB	MSB	LSB	MSB	LSB		Later bad block info (Read/Write/Erase)
F1	00	LSB			MSB	00	00	00	00	Total LBA written(LBA=32MB)
F2	00	LSB			MSB	00	00	00	00	Total LBA read(LBA=32MB)

The temperature data on iSmart implies built-in or on-board thermal sensor value.

Notes: More detailed health info has been defined by innodisk and will be shown on iSMART V5.3.21 (or later version).
