

# MS-9A69-U Series

*Industrial Data Machine*

The MSI logo is a white, stylized lowercase "msi" with a thin, italicized font. It is positioned in the center of a blurred background image of a computer motherboard.

## Copyright and Trademarks Notice

All other marks and names mentioned may be trademarks of their respective owners. No warranty as to accuracy or completeness is expressed or implied. MSI reserves the right to make changes to this document without prior notice.

## Revision History

| Revision | Date    |
|----------|---------|
| V1.2     | 2021/11 |

## Technical Support

If a problem arises with your product and no solution can be obtained from the user's manual, please contact your place of purchase or local distributor. Alternatively, please visit <https://www.msi.com/support/> for further guidance.

# Safety Instructions

- Always read the safety instructions carefully.
- Keep this User's Manual for future reference.
- Keep this equipment away from humidity.
- Lay this equipment on a reliable flat surface before setting it up.
- The openings on the enclosure are for air convection hence protects the equipment from overheating. DO NOT COVER THE OPENINGS.
- Make sure the voltage of the power source and adjust properly 110/220V before connecting the equipment to the power inlet.
- Place the power cord such a way that people can not step on it. Do not place anything over the power cord.
- Always Unplug the Power Cord before inserting any add-on card or module.
- All cautions and warnings on the equipment should be noted.
- Never pour any liquid into the opening that could damage or cause electrical shock.
- If any of the following situations arises, get the equipment checked by service personnel:
  - ▶ The power cord or plug is damaged.
  - ▶ Liquid has penetrated into the equipment.
  - ▶ The equipment has been exposed to moisture.
  - ▶ The equipment does not work well or you can not get it work according to User's Manual.
  - ▶ The equipment has dropped and damaged.
  - ▶ The equipment has obvious sign of breakage.
- DO NOT LEAVE THIS EQUIPMENT IN AN ENVIRONMENT UNCONDITIONED, STORAGE TEMPERATURE ABOVE 60°C, IT MAY DAMAGE THE EQUIPMENT.

## **Important**

*If the power cord comes with a 3-pin plug, do not disable the protective earth pin from the plug. The equipment must be connected to an earthed mains socket-outlet.*

### 警告使用者:

此為甲類資訊技術設備，於居住環境中使用時，可能會造成射頻擾動，在此種情況下，使用者會被要求採取某些適當的對策。

## Chemical Substances Information

In compliance with chemical substances regulations, such as the EU REACH Regulation (Regulation EC No. 1907/2006 of the European Parliament and the Council), MSI provides the information of chemical substances in products at:

<https://csr.msi.com/global/index>

## Battery Information

European Union:

Batteries, battery packs, and accumulators should not be disposed of as unsorted household waste. Please use the public collection system to return, recycle, or treat them in compliance with the local regulations.

廢電池請回收

California, USA:

The button cell battery may contain perchlorate material and requires special handling when recycled or disposed of in California.

For further information please visit:

<https://dtsc.ca.gov/perchlorate/>

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer.

## CE Conformity

Hereby, Micro-Star International CO., LTD declares that this device is in compliance with the essential safety requirements and other relevant provisions set out in the European Directive.

## FCC-A Radio Frequency Interference Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

### Notice 1

The changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

### Notice 2

Shielded interface cables and AC power cord, if any, must be used in order to comply with the emission limits.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) this device may not cause harmful interference, and
- 2) this device must accept any interference received, including interference that may cause undesired operation.

## WEEE Statement

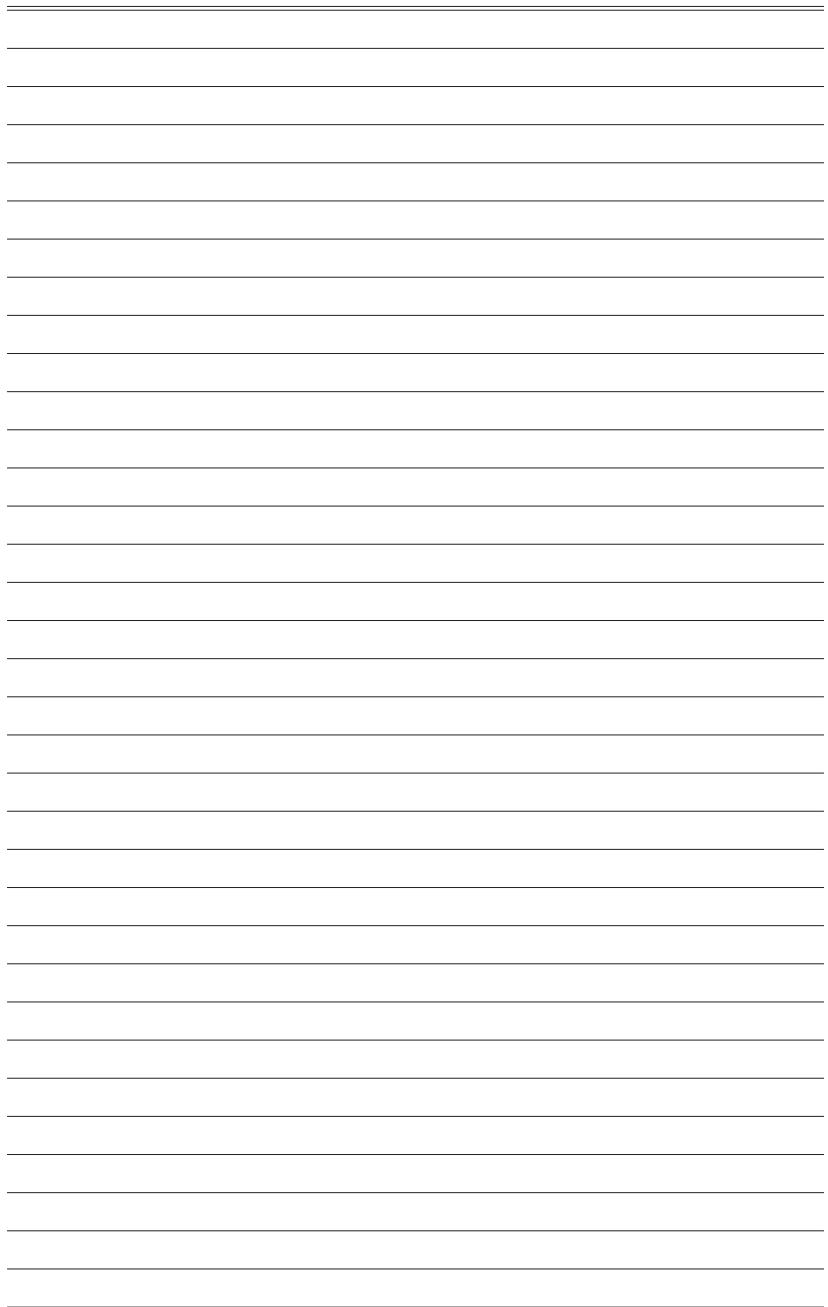

Under the European Union ("EU") Directive on Waste Electrical and Electronic Equipment, Directive 2012/19/EU, products of "electrical and electronic equipment" cannot be discarded as municipal waste anymore and manufacturers of covered electronic equipment will be obligated to take back such products at the end of their useful life.

# 1 Overview

Thank you for choosing the MS-9A69-U Series, an excellent industrial data machine from MSI.

The wide heatsink fanless solution of MS-9A69-U Series eliminates the noise and the risk of fan's failure. Furthermore, it supports VESA and wall-mount interfaces for various scenarios like digital signage, kiosk, industrial control and POS with affordable expenditure, which not only meets the demand of Industrial applications but also fulfills the needs of companies, governments and institutes for general applications.

## Package Contents

- 1. MS-9A69-U Series Industrial Data Machine
- 2. Power Adapter & Power Cord
- 3. SATA Power & Signal Cable
- 4. Phoenix Plug-in Terminal Block
- 5. Jumper Caps
- 6. Wall Mount Set
- 7. DIN Rail Mount Set
- 8. VESA Mount Set (Optional)
- 9. Driver/Utility Disc

- \* Contact your place of purchase or local distributor if any of the items is damaged or missing.
- \* Package contents may vary by country.

# System Overview

## ► System I/O & Controls

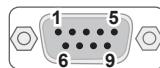

**1****WiFi Antenna Connector (Optional)**

This connector allows you to connect an external antenna for wireless LAN.

**2****RS232 Serial Port: COM3 ~ COM6**

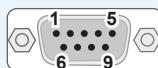

The serial port is a 16550A high speed communications port that sends/receives 16 bytes FIFOs. It supports barcode scanners, barcode printers, bill printers, credit card machine, etc.

**RS232**

| PIN | SIGNAL | DESCRIPTION                       |
|-----|--------|-----------------------------------|
| 1   | DCD    | Data Carrier Detect               |
| 2   | RXD    | Receive Data                      |
| 3   | TXD    | Transmit Data                     |
| 4   | DTR    | Data Terminal Ready               |
| 5   | GND    | Ground                            |
| 6   | DSR    | Data Set Ready                    |
| 7   | RTS    | Request To Send                   |
| 8   | CTS    | Clear To Send                     |
| 9   | POWER  | 5V or 12V selected by GPIO (BIOS) |

**3****RS232/422/485 Serial Port: COM1 ~ COM2**

The serial port is a 16550A high speed communications port that sends/receives 16 bytes FIFOs. It supports barcode scanners, barcode printers, bill printers, credit card machine, etc.

**RS232**

| PIN | SIGNAL | DESCRIPTION                       |
|-----|--------|-----------------------------------|
| 1   | DCD    | Data Carrier Detect               |
| 2   | RXD    | Receive Data                      |
| 3   | TXD    | Transmit Data                     |
| 4   | DTR    | Data Terminal Ready               |
| 5   | GND    | Ground                            |
| 6   | DSR    | Data Set Ready                    |
| 7   | RTS    | Request To Send                   |
| 8   | CTS    | Clear To Send                     |
| 9   | POWER  | 5V or 12V selected by GPIO (BIOS) |

**RS422**

| PIN | SIGNAL | DESCRIPTION             |
|-----|--------|-------------------------|
| 1   | TXD-   | Transmit Data, Negative |
| 2   | TXD+   | Transmit Data, Positive |
| 3   | RXD+   | Receive Data, Positive  |
| 4   | RXD-   | Receive Data, Negative  |
| 5   | GND    | Ground                  |
| 6   | NC     | No Connection           |
| 7   | NC     | No Connection           |
| 8   | NC     | No Connection           |
| 9   | NC     | No Connection           |

**RS485**

| PIN | SIGNAL | DESCRIPTION    |
|-----|--------|----------------|
| 1   | D-     | Data, Negative |
| 2   | D+     | Data, Positive |
| 3   | NC     | No Connection  |
| 4   | NC     | No Connection  |
| 5   | GND    | Ground         |
| 6   | NC     | No Connection  |
| 7   | NC     | No Connection  |
| 8   | NC     | No Connection  |
| 9   | NC     | No Connection  |

**4****Power Button**

Press the button to turn the system on or off.

**5****Microphone Jack**

This connector is provided for microphones.

**6****Line-Out Jack**

This connector is provided for headphones or speakers.

**7****USB 2.0 Port**

The USB (Universal Serial Bus) port is for attaching USB devices such as keyboard, mouse, or other USB-compatible devices.

**8****Extend Switch Connector**

This connector is provided for remote power button control.

**9****Phoenix DC Power Connector**

The system is designed with a Phoenix connector that carries DC input.

**Important**

*Your power source can either be connected to the Power Jack or the Phoenix DC Power Connector. Avoid connecting to both simultaneously.*

**10****Power Jack**

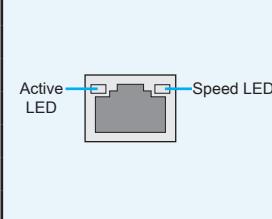

Power supplied through this jack supplies power to the system.

**Important**

*Your power source can either be connected to the Power Jack or the Phoenix DC Power Connector. Avoid connecting to both simultaneously.*

**11****GbE RJ45 Port**

The standard RJ45 LAN jack is provided for connection to the Local Area Network (LAN). You can connect a network cable to it.

|            | LED      | LED Status          | Description |
|------------|----------|---------------------|-------------|
| Active LED | Off      | No link             |             |
|            | Yellow   | Linked              |             |
|            | Blinking | Data activity       |             |
| Speed LED  | Off      | 10 Mbps connection  |             |
|            | Green    | 100 Mbps connection |             |
|            | Orange   | 1 Gbps connection   |             |

**12****USB 3.2 Gen 1 Port**

USB 3.2 Gen 1, the SuperSpeed USB, delivers up to 5Gbps high-speed data transfer for various devices, such as storage devices, hard drives, video cameras, etc.

**13**

### HDMI Port

The High-Definition Multimedia Interface (HDMI) is an all-digital audio/video interface capable of transmitting uncompressed streams. HDMI supports all TV format, including standard, enhanced, or high-definition video, plus multi-channel digital audio on a single cable.

**14**

### DisplayPort

DisplayPort is a digital display interface standard. This connector is used to connect a monitor with DisplayPort inputs.

**15**

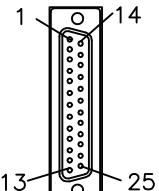

### LVDS Port (Optional)

The LVDS (Low Voltage Differential Signal) connector provides a digital interface typically used with flat panels.

**16**

### DIO Port

This port is provided for the Digital Input/Output (DIO) peripheral module.

|    | PIN  | SIGNAL | PIN | SIGNAL |
|----|------|--------|-----|--------|
| 1  | GND  |        | 14  | GND    |
| 2  | GPO0 |        | 15  | GPI0   |
| 3  | GPO1 |        | 16  | GPI1   |
| 4  | GPO2 |        | 17  | GPI2   |
| 5  | GPO3 |        | 18  | GPI3   |
| 6  | GPO4 |        | 19  | GPI4   |
| 7  | GPO5 |        | 20  | GPI5   |
| 8  | GPO6 |        | 21  | GPI6   |
| 9  | GPO7 |        | 22  | GPI7   |
| 10 | VCC5 |        | 23  | VCC5   |
| 11 | NC   |        | 24  | NC     |
| 12 | NC   |        | 25  | NC     |
| 13 | NC   |        |     |        |

**17**

### Grounding Point

The Grounding Point is provided to connect a grounding wire.

# System Specifications

## Processor

- Intel® Kaby Lake-U i3-7100U (MS-9A69-U2)
- Intel® Kaby Lake-U i5-7300U (MS-9A69-U3)

## Memory

- 1 x DDR4 2133 MHz SO-DIMM slot
- Up to 16GB

## Network

- 1 x Intel® I219 GbE PHY LAN
- 1 x Intel® I210 GbE LAN

## Audio

- Realtek® ALC887-VD2-CG HDA Codec
- Compliant with Azalia 1.0 specs

## Graphics

- HD Graphics integrated in Intel® processor
- LVDS up to 1920 x 1200 @60Hz
- HDMI up to 4096 x 2160 @24Hz
- DisplayPort up to 3840 x 2160 @60Hz (Supports DP++)
- 3 independent displays supported: DP+HDMI+LVDS

## Storage

- 1 x 2.5" SATA III HDD/SSD
- 1 x mSATA 6Gb/s slot

## Expansion Slot

- 1 x Mini PCIe1 (Full-size, with Nano SIM-Holder)
- 1 x Mini PCIe2 (Full-size, with mSATA)

## Front Panel Input/Output

- 2 x WiFi Antenna Connectors (Optional)
- 2 x RS232/422/485 Serial Port (COM1 ~ COM2)
- 4 x RS232 Serial Ports (COM3 ~ COM6)
- 1 x Power Button
- 1 x Microphone Jack
- 1 x Line-Out Jack
- 2 x USB 2.0 Ports

## Rear Panel Input/Output

- 2 x WiFi Antenna Connectors (Optional)
- 1 x Extend Switch Connector
- 1 x Phoenix DC Power Connector
- 1 x Power Jack
- 2 x GbE RJ45 Ports (2 Optional Ports for Up to 4 x GbE RJ45 Ports)
- 4 x USB 3.2 Gen 1 Ports
- 1 x HDMI Port
- 1 x DisplayPort
- 1 x LVDS Port (Optional)
- 1 x DIO Port
- 1 x Grounding Point

## Power Supply

- 65 Watt Power Adapter
  - ▶ Input: 100~240Vac, 1.5A, 50~60Hz
  - ▶ Output: 19Vdc, 3.42A
  - ▶ No power consumption for COM1~6
- 90 Watt Power Adapter (Optional)
  - ▶ Input: 100~240Vac, 1.2A, 50~60Hz
  - ▶ Output: 19Vdc, 4.74A
  - ▶ Full power consumption for COM1~6

### Important

Before powering on the system, recheck the adapter to ensure safety.

## Dimension & Weight

- 200mm (L) x 150mm (W) x 55mm (H)
- 1.39 Kg

## Regulatory Compliance

- EMC: FCC Class A, CE, RCM, BSMI, VCCI
- Safety: BSMI
- IEC61373
- RoHS Compliant

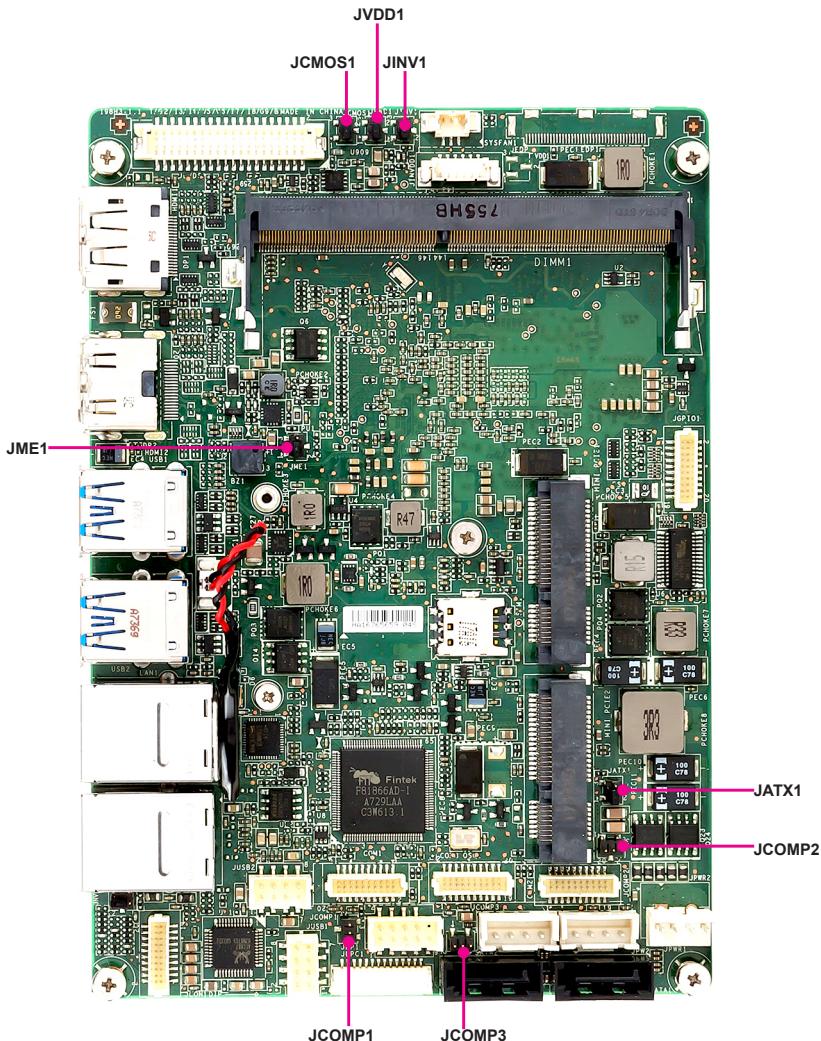

## Environment

- Operating Temperature
  - ▶ -10 ~ 45°C (with HDD)
  - ▶ -10 ~ 55°C (with SSD/mSATA)
- Storage Temperature: -20 ~ 80°C
- Humidity: 10 ~ 90% RH, non-condensing

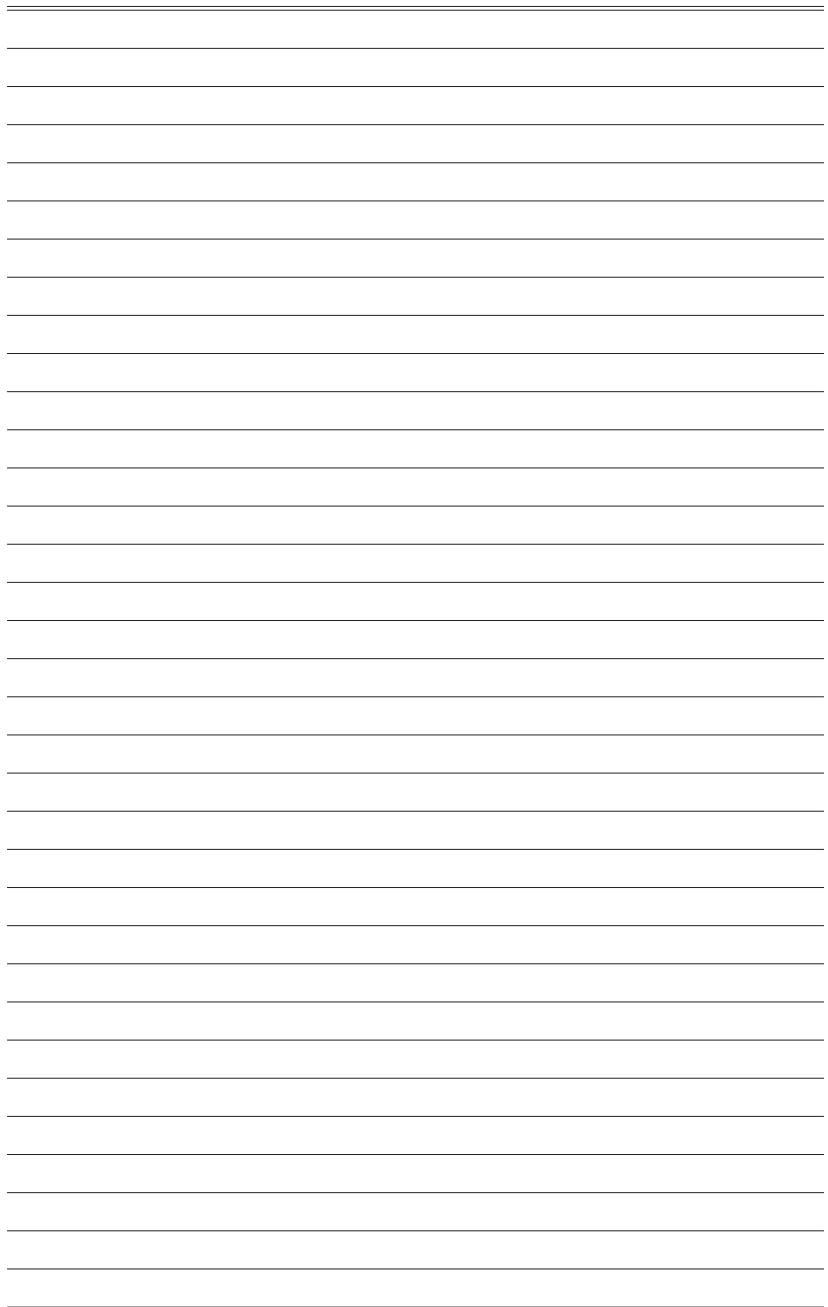

# Motherboard Jumpers

## Important

Avoid adjusting jumpers when the system is on; it will damage the motherboard.

| Jumper Name       | Default Setting   | Description  |                 |
|-------------------|---|--------------|-----------------|
| JCMOS1            |    | 1-2: Normal  | 2-3: Clear CMOS |
| JATX1             |    | 1-2: ATX     | 2-3: AT         |
| JME1              |    | 1-2: Disable | 2-3: Enable     |
| JCOMP1            |    | 1-2: +5V     | 2-3: +12V       |
| JCOMP2,<br>JCOMP3 | 1  | 1-2: +5V     | 2-3: +12V       |
| JVDD1             |    | 1-2: +3V     | 2-3: +5V        |
| JINV1             |    | 1-2: +5V     | 2-3: +12V       |

# 2 Getting Started

This chapter provides you with the information on hardware setup procedures. While doing the installation, be careful in holding the components and follow the installation procedures. For some components, if you install in the wrong orientation, the components will not work properly.

Use a grounded wrist strap before handling computer components. Static electricity may damage the components.

**Important**

*Always unplug the power cord before installing any components.*

## Installation Tools

|   |   |
|---|---|
|  | A Phillips (crosshead) screwdriver and a flathead screwdriver, can be used to do most of the installation. Choose one with a magnetic head would be better. |
|  | Pliers, can be used as an auxiliary tool to connect some connectors or cables.  |
|  | Forceps, can be used to pick up tiny screws or set up the jumpers.  |
|  | Rubber gloves, can prevent yourself from being incised and suffering the static charge.   |

## System Cover

1. Place the system horizontally on a flat and steady surface. Locate and remove the screws that secure the system cover.

2. Lift the cover carefully upwards and remove it from the system.

## Memory (Optional)

1. Locate the memory slot.

2. Align the notch on the memory with the key on the slot and insert the memory into the slot at a 45-degree angle.

3. Push the memory gently downwards until the slot clips click and lock the memory in place.

### **Important**

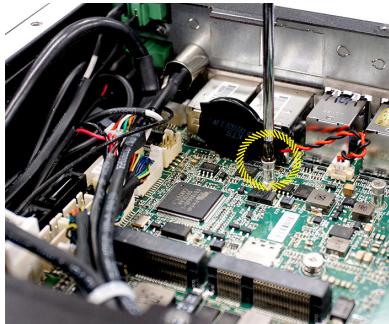

- You can barely see the golden finger if the DIMM is properly inserted in the DIMM slot.
- To uninstall the DIMM, flip the slot clips outwards and the DIMM will be released instantly.

# mSATA Card (Optional)

## Important

For Mini PCIe cards that draw power from the motherboard, make sure they operate at exactly the same voltage as the system power source.

1. Locate the MINI\_PCIE2 slot.  
Remove the screw preinstalled on the motherboard.

2. Insert the mSATA card into the slot at a 45-degree angle.

3. Push the card gently downwards and fasten it with a screw.

## WiFi Card (Optional)

### Important

*For Mini PCIe cards that draw power from the motherboard, make sure they operate at exactly the same voltage as the system power source.*

1. Find the antenna cable modules in the accessory box.

2. Disassemble the system rear panel.
3. Assemble the antenna cables to the system rear panel.

4. Fasten the rear panel back to the system with screws.

- 
5. Locate the Mini PCIe slot.  
Remove the Mini PCIe card screw preinstalled on the motherboard.

6. Insert the WiFi card into the slot at a 45-degree angle.

7. Push the card gently downwards and fasten it with a screw.

---

8. Connect the antenna cables.

## WiFi/LTE Antenna (Optional)

1. Find the WiFi/LTE antennas in the accessory box. Turn clockwise to lock the antennas and anti-clockwise to unlock.
2. Adjust the direction of the antennas for better signal reception.

## LVDS Cable (Optional)

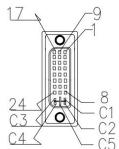

1. Remove the screw and LVDS brackets with pliers.

2. Secure the LVDS cable to the system rear panel with two hexagonal screws.

- 
3. Connect the LVDS cable to the LVDS connector on the motherboard. Make sure the LVDS cable is inserted in the right direction.

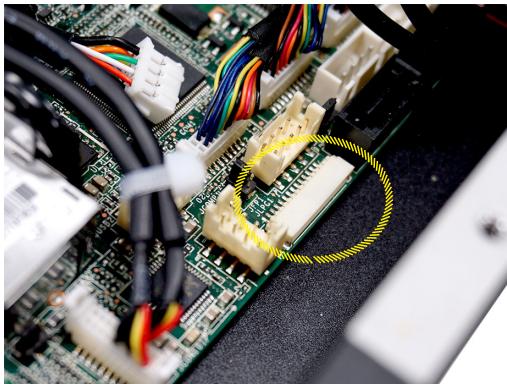

| Pin | Signal        | Pin | Signal        | Pin | Signal         |
|-----|---------------|-----|---------------|-----|----------------|
| 1   | L_BKLT_CTRL#  | 13  | LCD_VDD       | C1  | +12V           |
| 2   | LVDS_BLRD     | 14  | LCD_VDD       | C2  | LVDS_DETECT#_C |
| 3   | LVDSA_DATA0   | 15  | LVDSB_DATA0   | C3  | +12V           |
| 4   | LVDSA_GND     | 16  | LVDSB_GND     | C4  | GND            |
| 5   | LVDSA_DATA1   | 17  | LVDSB_DATA1   | C5  | GND            |
| 6   | LVDSA_DATA4#  | 18  | LVDSB_DATA4#  |     |                |
| 7   | LVDSA_DATA2   | 19  | LVDSB_DATA2   |     |                |
| 8   | LVDSA_DATA4#2 | 20  | LVDSB_DATA4#2 |     |                |
| 9   | LVDSA_DATA3   | 21  | LVDSB_DATA3   |     |                |
| 10  | LVDSA_GND#3   | 22  | LVDSB_GND#3   |     |                |
| 11  | LVDSA_CLK     | 23  | LVDSB_CLK     |     |                |
| 12  | LVDSA_CLK#    | 24  | LVDSB_CLK#    |     |                |

## TPM/LPC Cable (Optional)

1. Disassemble the system rear panel.
2. Route the cables gently aside to uncover the TPM/LPC connector.

3. Align the cable connector to the motherboard TPM/LPC connector. Note that the pins of the cable connector should face downwards .

the pins of the cable connector

4. Gently and carefully push the cable connector towards the motherboard until it is firmly secured to the onboard TPM/LPC connector.

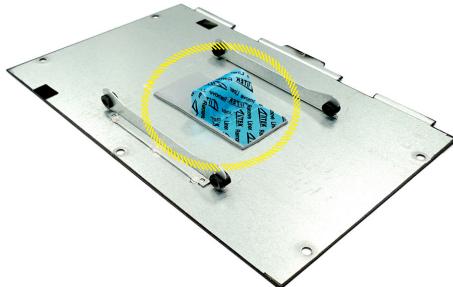

**Important**

*Be careful when inserting the cable connector. Avoid damaging the pins on the cable connector and the onboard TPM/LPC connector.*

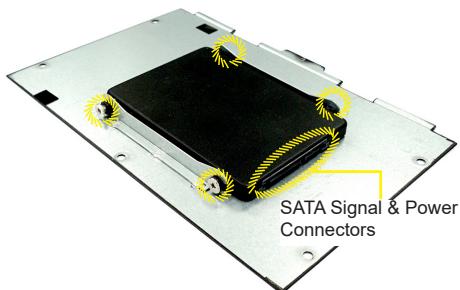

## 2.5" SSD/HDD (Optional)

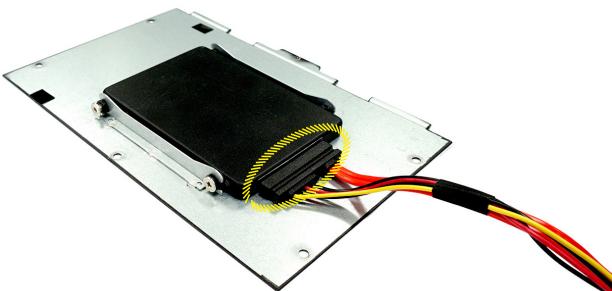

1. Flip over the system cover and locate the SSD/HDD bracket. Remove the sticker film to uncover the thermal paste.

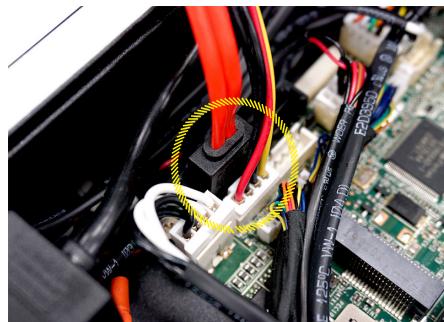

2. Check the following photo for correct orientation and place the 2.5" SSD/HDD into the bracket with screw holes aligned.
3. Tighten the screws to fix the SSD/HDD to the system cover.

4. Connect the SATA signal & power cable to the SSD/HDD.

5. Connect the SATA signal & power cable to the motherboard.

## Wall Mount

1. Flip over the system and locate the bracket screw holes.
2. Place the brackets along the sides with screw holes aligned.
3. Fasten the screws to fix the wall mount brackets.

## DIN Rail Mount 1

1. Check the accessory box for the DIN rails.

2. Put the DIN rails on the wall mount brackets with the hooks aligned.
3. Insert screws through the wall mount brackets into the DIN rails and tighten until each DIN rail is secure.

## DIN Rail Mount 2 (Optional)

- 
1. Check the VESA mount plate for the DIN rail screw holes.

- 
2. Put the DIN rails on the VESA mount plate with screw holes aligned.
  3. Insert screws through the VESA mount plate into the DIN rails and tighten until each DIN rail is secure.

4. Mount the VESA mount plate onto the system and tighten the thumbscrew of the VESA mount plate.

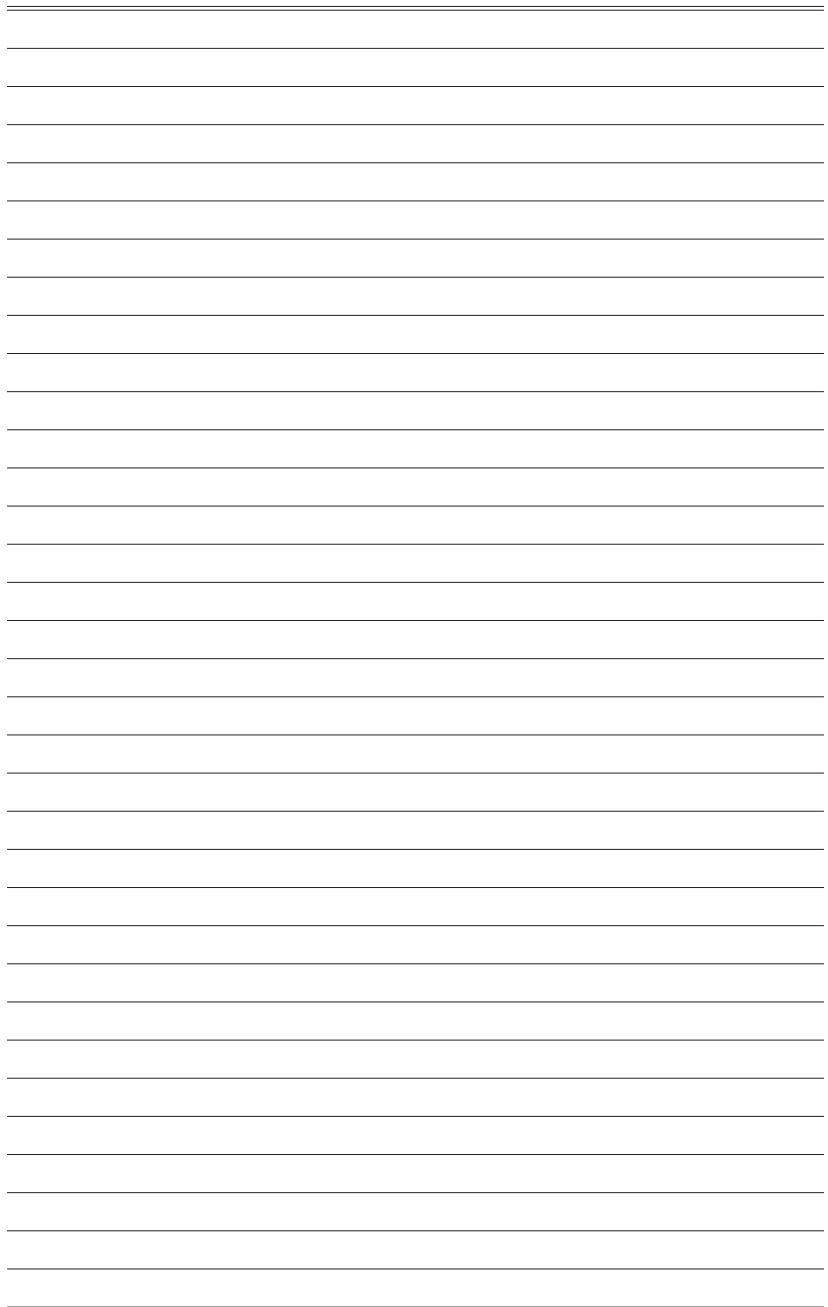

## VESA Mount (Optional)

1. Locate the VESA mount screw holes on the intended device.
2. Fasten the VESA mount plate to the device with the supplied screws.

3. Mount the system onto the VESA mount plate.
4. Tighten the thumbscrew at the bottom of the VESA mount plate to secure the system.

# 3 BIOS Setup

This chapter provides information on the BIOS Setup program and allows users to configure the system for optimal use.

Users may need to run the Setup program when:

- An error message appears on the screen at system startup and requests users to run SETUP.
- Users want to change the default settings for customized features.

## **Important**

- Please note that BIOS update assumes technician-level experience.
- As the system BIOS is under continuous update for better system performance, the illustrations in this chapter should be held for reference only.

## Entering Setup

Power on the computer and the system will start POST (Power On Self Test) process. When the message below appears on the screen, press <DEL> or <F2> key to enter Setup.

Press <DEL> or <F2> to enter SETUP

If the message disappears before you respond and you still wish to enter Setup, restart the system by turning it OFF and On or pressing the RESET button. You may also restart the system by simultaneously pressing <Ctrl>, <Alt>, and <Delete> keys.

### **Important**

*The items under each BIOS category described in this chapter are under continuous update for better system performance. Therefore, the description may be slightly different from the latest BIOS and should be held for reference only.*

## Control Keys

|       |                    |
|-------|--------------------|
| ← →   | Select Screen      |
| ↑ ↓   | Select Item        |
| Enter | Select             |
| + -   | Change Option      |
| F1    | General Help       |
| F7    | Previous Values    |
| F9    | Optimized Defaults |
| F10   | Save & Reset       |
| Esc   | Exit               |

## Getting Help

After entering the Setup menu, the first menu you will see is the Main Menu.

### Main Menu

The main menu lists the setup functions you can make changes to. You can use the arrow keys (↑↓) to select the item. The on-line description of the highlighted setup function is displayed at the bottom of the screen.

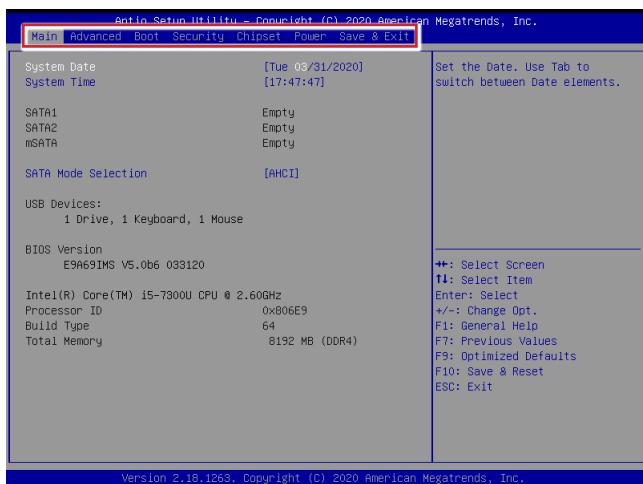

### Sub-Menu

If you find a right pointer symbol appears to the left of certain fields that means a sub-menu can be launched from this field. A sub-menu contains additional options for a field parameter. You can use arrow keys (↑↓) to highlight the field and press <Enter> to call up the sub-menu. Then you can use the control keys to enter values and move from field to field within a sub-menu. If you want to return to the main menu, just press the <Esc>.

### General Help <F1>

The BIOS setup program provides a General Help screen. You can call up this screen from any menu by simply pressing <F1>. The Help screen lists the appropriate keys to use and the possible selections for the highlighted item. Press <Esc> to exit the Help screen.

# The Menu Bar

## ► Main

Use this menu for basic system configurations, such as time, date, etc.

## ► Advanced

Use this menu to set up the items of special enhanced features.

## ► Boot

Use this menu to specify the priority of boot devices.

## ► Security

Use this menu to set supervisor and user passwords.

## ► Chipset

This menu controls the advanced features of the onboard chipsets.

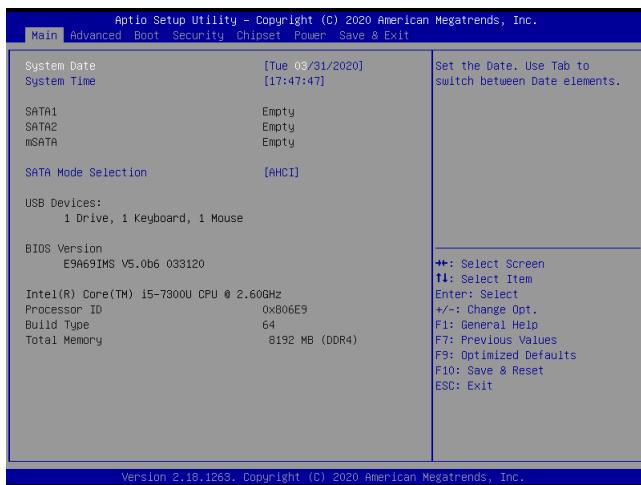

## ► Power

Use this menu to specify your settings for power management.

## ► Save & Exit

This menu allows you to load the BIOS default values or factory default settings into the BIOS and exit the BIOS setup utility with or without changes.

# Main

## ► System Date

This setting allows you to set the system date. The date format is <Day>, <Month> <Date> <Year>.

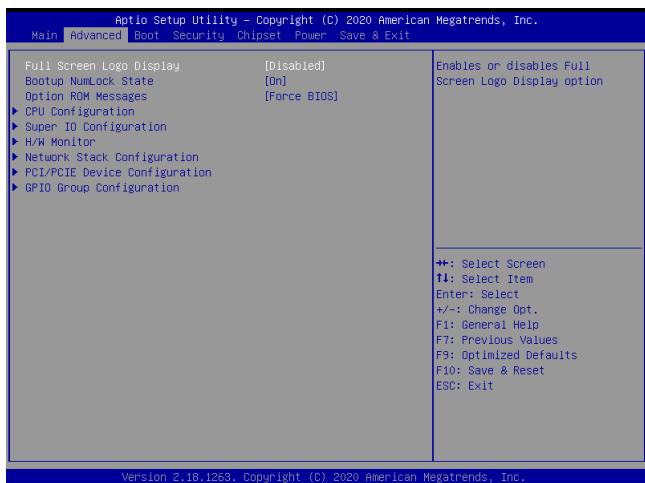

## ► System Time

This setting allows you to set the system time. The time format is <Hour> <Minute> <Second>.

## ► SATA Mode Selection

This setting specifies the SATA controller mode.

# Advanced

## ► Full Screen Logo Display

This BIOS feature determines if the BIOS should hide the normal POST messages with the motherboard or system manufacturer's full-screen logo.

When it is enabled, the BIOS will display the full-screen logo during the boot-up sequence, hiding normal POST messages.

When it is disabled, the BIOS will display the normal POST messages, instead of the full-screen logo.

Please note that enabling this BIOS feature often adds 2-3 seconds of delay to the booting sequence. This delay ensures that the logo is displayed for a sufficient amount of time. Therefore, it is recommended that you disable this BIOS feature for a faster boot-up time.

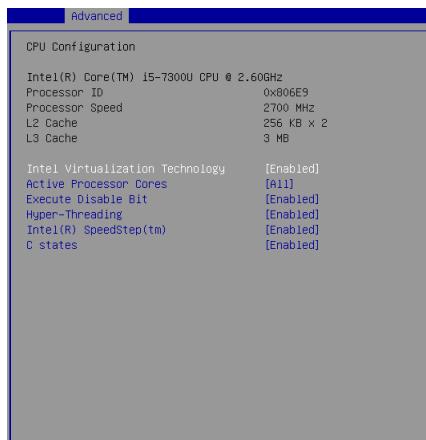

## ► Bootup NumLock State

This setting is to set the Num Lock status when the system is powered on. Setting to [On] will turn on the Num Lock key when the system is powered on. Setting to [Off] will allow users to use the arrow keys on the numeric keypad.

## ► Option ROM Messages

This item is used to determine the display mode when an optional ROM is initialized during POST. When set to [Force BIOS], the display mode used by AMI BIOS is used. Select [Keep Current] if you want to use the display mode of optional ROM.

## ► CPU Configuration

### ► Intel Virtualization Technology

Virtualization enhanced by Intel Virtualization Technology will allow a platform to run multiple operating systems and applications in independent partitions. With virtualization, one computer system can function as multiple “Virtual” systems.

### ► Active Processor Cores

This setting specifies the number of active processor cores.

### ► Execute Disable Bit

Intel’s Execute Disable Bit functionality can prevent certain classes of malicious “buffer overflow” attacks when combined with a supporting operating system. This functionality allows the processor to classify areas in memory by where application code can execute and where it cannot. When a malicious worm attempts to insert code in the buffer, the processor disables code execution, preventing damage or worm propagation.

### ► Hyper-Threading

The processor uses Hyper-Threading technology to increase transaction rates and reduces end-user response times. The technology treats the two cores inside the processor as two logical processors that can execute instructions simultaneously. In this way, the system performance is highly improved. If you disable the function, the processor will use only one core to execute the instructions. Please disable this item if your operating system doesn’t support HT Function, or unreliability and instability may occur.

### ► Intel(R) SpeedStep(tm)

EIST (Enhanced Intel SpeedStep Technology) allows the system to dynamically adjust processor voltage and core frequency, which can result in decreased average power consumption and decreased average heat production. When disabled, the processor will return the actual maximum CPUID input value of the processor when queried.

### ► C States

This setting controls the C-State (CPU Power state). C-State performance indicates the ability to run the processor in lower power states when the PC is idle. This setting enables/disables the C-State Configuration for power saving purposes.

### ► Super IO Configuration

### ► Serial Port 1/ 2/ 3/ 4/ 5/ 6

This setting enables/disables the specified serial port.

#### ► Change Settings

This setting is used to change the address & IRQ settings of the specified serial port.

#### ► Mode Select

Select an operation mode for the specified serial port.

#### ► Watch Dog Timer

You can enable the system watch-dog timer, a hardware timer that generates a reset when the software that it monitors does not respond as expected each time the watch dog polls it.

#### ► FIFO Mode

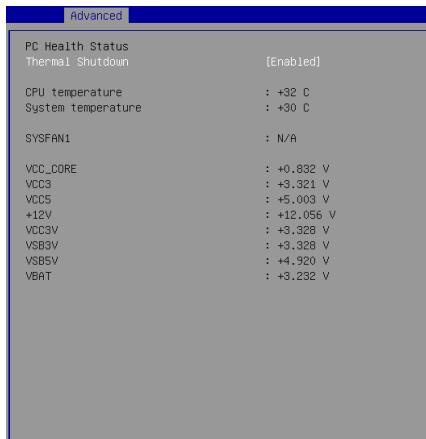

This setting controls the FIFO data transfer mode.

#### ► Shared IRQ Mode

This setting provides the system with the ability to share interrupts among its serial ports.

## ► H/W Monitor

These items display the current status of all monitored hardware devices/components such as voltages, temperatures and all fans' speeds.

## ► Thermal Shutdown

This setting enables/disables the thermal shutdown function for system thermal protection.

## ► Network Stack Configuration

This menu provides Network Stack settings for users to enable network boot (PXE) from BIOS.

## ► Network Stack

When this setting is set to [Enabled], the system will boot via the network instead of a disk drive.

**► PCI/PCIE Device Configuration****► Legacy USB Support**

Set to [Enabled] if you need to use any USB 1.1/2.0 device in the operating system that does not support or have any USB 1.1/2.0 driver installed, such as DOS and SCO Unix.

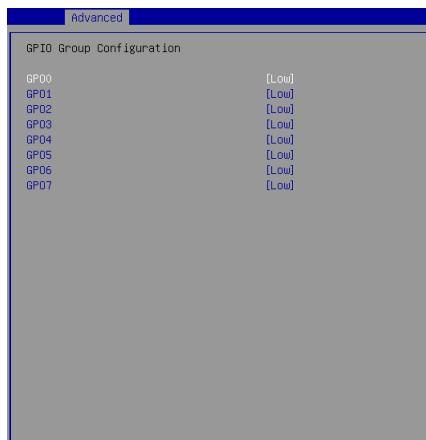

**► Audio Controller**

This setting enables/disables the onboard audio controller.

**► Launch OnBoard LAN OpROM**

These settings enable/disable the initialization of the onboard/onchip LAN Boot ROM during bootup. Selecting [Disabled] will speed up the boot process.

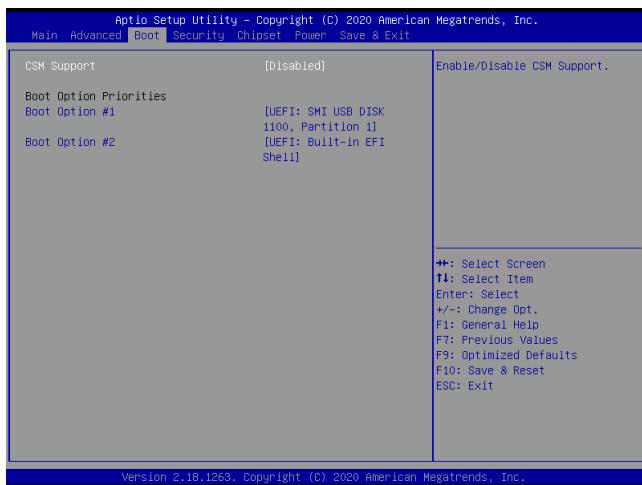

## ► GPIO Group Configuration

### ► GPO0 ~ GPO7

These settings control the operation mode of the specified GPIO.

# Boot

## ► CSM Support

This setting enables/disables the support for Compatibility Support Module, a part of the Intel Platform Innovation Framework for EFI providing the capability to support legacy BIOS interfaces.

## ► Boot Option Priorities

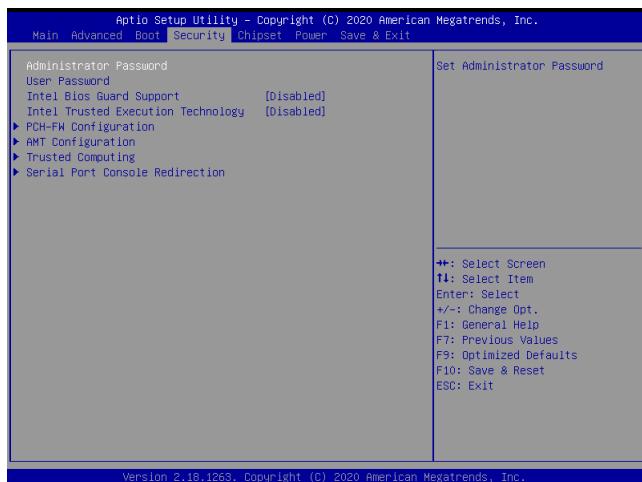

This setting allows users to set the sequence of boot devices where BIOS attempts to load the disk operating system.

# Security

## MS-9A69-U2

## MS-9A69-U3

### ► Administrator Password

Administrator Password controls access to the BIOS Setup utility.

### ► User Password

User Password controls access to the system at boot and to the BIOS Setup utility.

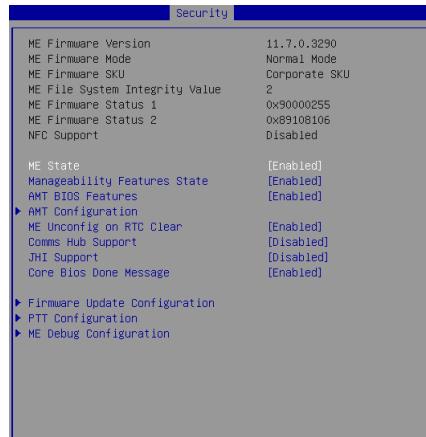

### ► Intel BIOS Guard Support

Intel BIOS Guard Support ensures that updates to system BIOS flash are secure.

### ► Intel Trusted Execution Technology

Intel Trusted Execution Technology provides highly scalable platform security in physical and virtual infrastructures.

### ► PCH-FW Configuration

### ► ME Firmware Version, ME Firmware Mode, ME Firmware SKU, ME File System Integrity Value, ME Firmware Status 1, ME Firmware Status 2, NFC Support

These settings show the firmware information of the Intel ME (Management Engine).

#### ► ME State

This setting enables/disables the ME status.

#### ► ME Unconfig on RTC Clear

This setting enables/disables ME firmware unconfigure on RTC clear.

#### ► Comms Hub Support

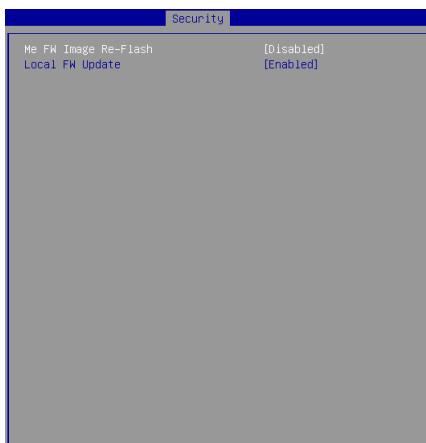

This setting enables/disables Comms Hub Support.

#### ► JHI Support

This setting enables/disables JHI Support.

#### ► Core BIOS Done Message

This setting enables/disables the Core BIOS Done Message.

**► Firmware Update Configuration****MS-9A69-U2****MS-9A69-U3****► ME FW Image Re-Flash**

This setting enables/disables the ME FW image reflash.

**► Local FW Update**

This setting enables/disables the local firmware update.

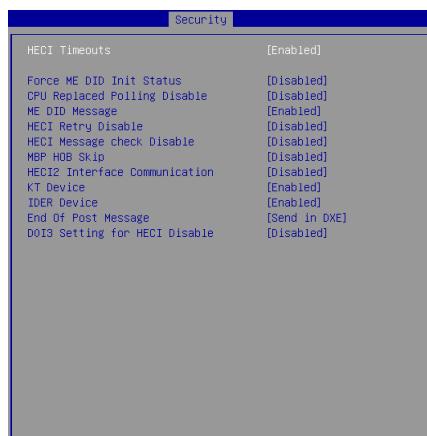

### ► PTT Configuration

Intel Platform Trust Technology (PTT) is a platform functionality for credential storage and key management used by Microsoft Windows.

### ► ME Debug Configuration

This menu offers ME Debug settings for testing purposes.

### ► AMT Configuration (*For MS-9A69-U3*)

Intel Active Management Technology (AMT) is hardware-based technology for remotely managing and securing PCs out-of-band.

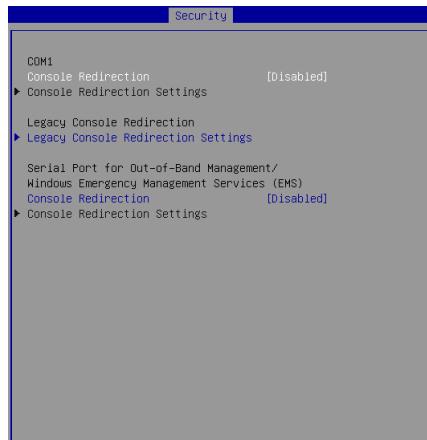

### ► Trusted Computing

### ► Security Device Support

This setting enables/disables BIOS support for security device. When set to [Disable], the OS will not show security device. TCG EFI protocol and INT1A interface will not be available.

### ► Serial Port Console Redirection

## COM1

### ► Console Redirection

Console Redirection operates in host systems that do not have a monitor and keyboard attached. This setting enables/disables the operation of console redirection. When set to [Enabled], BIOS redirects and sends all contents that should be displayed on the screen to the serial COM port for display on the terminal screen. Besides, all data received from the serial port is interpreted as keystrokes from a local keyboard.

### ► Console Redirection Settings

#### ► Terminal Type

To operate the system's console redirection, you need a terminal supporting ANSI terminal protocol and a RS-232 null modem cable connected between the host system and terminal(s). This setting specifies the type of terminal device for console redirection.

#### ► Bits per second, Data Bits, Parity, Stop Bits

This setting specifies the transfer rate (bits per second, data bits, parity, stop bits) of Console Redirection.

#### ► Flow Control

Flow control is the process of managing the rate of data transmission between two nodes. It's the process of adjusting the flow of data from one device to another to ensure that the receiving device can handle all of the incoming data. This is particularly important where the sending device is capable of sending data much faster than the receiving device can receive it.

#### ► VT-UTF8 Combo Key Support

This setting enables/disables the VT-UTF8 combination key support for ANSI/VT100 terminals.

#### ► Recorder Mode, Resolution 100x31

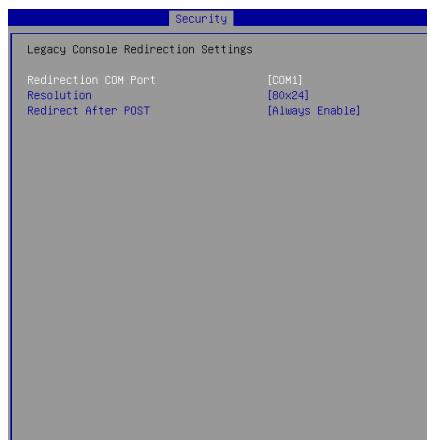

These settings enable/disable the recorder mode and the resolution 100x31.

#### ► Putty Keypad

PuTTY is a terminal emulator for Windows. This setting controls the numeric keypad for use in PuTTY.

### Legacy Console Redirection

#### ► Legacy Console Redirection Settings

► **Redirection COM Port**

This setting specifies the COM port for redirection.

► **Resolution**

This setting specifies the redirection resolution of legacy OS.

► **Redirect After POST**

This setting determines whether or not to keep terminals' console redirection running after the POST has booted.

**Serial Port for Out-of-Band Management/ Windows Emergency Management Services (EMS)**

► **Console Redirection**

Console Redirection operates in host systems that do not have a monitor and keyboard attached. This setting enables/disables the operation of console redirection. When set to [Enabled], BIOS redirects and sends all contents that should be displayed on the screen to the serial COM port for display on the terminal screen. Besides, all data received from the serial port is interpreted as keystrokes from a local keyboard.

► **Console Redirection Settings**

► **Out-of-Band Mgmt Port**

This setting specifies the Out-of-Band Management Port.

► **Terminal Type**

To operate the system's console redirection, you need a terminal supporting ANSI terminal protocol and a RS-232 null modem cable connected between the host system and terminal(s). This setting specifies the type of terminal device for console redirection.

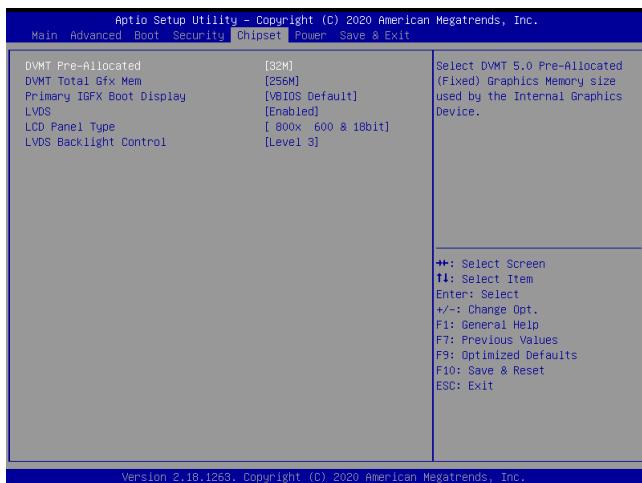

► **Bits per second, Data Bits, Parity, Stop Bits**

This setting specifies the transfer rate (bits per second, data bits, parity, stop bits) of Console Redirection.

**► Flow Control**

Flow control is the process of managing the rate of data transmission between two nodes. It's the process of adjusting the flow of data from one device to another to ensure that the receiving device can handle all of the incoming data. This is particularly important where the sending device is capable of sending data much faster than the receiving device can receive it.

# Chipset

## ► DVMT Pre-Allocated

This setting selects DVMT 5.0 Pre-Allocated (Fixed) Graphics Memory size used by the Internal Graphics Device.

## ► DVMT Total Gfx Mem

This setting specifies the memory size for DVMT.

## ► Primary IGFX Boot Display

Use the field to select the type of device you want to use as the displays of the system.

## ► LVDS

This setting allows users to enable/disable the LVDS interface.

## ► LCD Panel Type

This setting specifies the LCD panel type.

## ► LVDS Backlight Control

This setting controls the intensity of the LVDS backlight.

# Power

## ► Restore AC Power Loss

This setting specifies whether your system will reboot after a power failure or interrupt occurs. Available settings are:

|              |  |
|--------------|--|
| [Power Off]  | Leaves the computer in the power off state.  |
| [Power On]   | Leaves the computer in the power on state.   |
| [Last State] | Restores the system to the previous status before power failure or interrupt occurred. |

## ► Deep Sleep Mode

The setting enables/disables the Deep S5 power saving mode. S5 is almost the same as G3 Mechanical Off, except that the PSU still supplies power, at a minimum, to the power button to allow return to S0. A full reboot is required. No previous content is retained. Other components may remain powered so the computer can “wake” on input from the keyboard, clock, modem, LAN, or USB device.

**\*\* Advanced Resume Events Control \*\***

► **Onchip GbE/USB**

The item allows the activity of the OnChip GbE/USB device to wake up the system from S3/S4 sleep state.

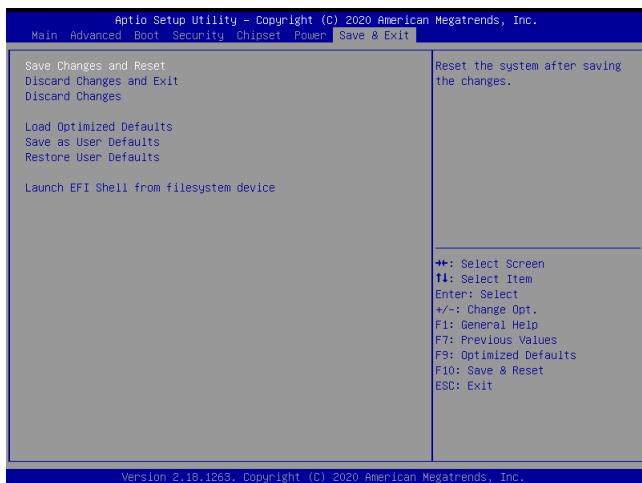

► **PCIE PME**

This field specifies whether the system will be awakened from power saving modes when activity or input signal of onboard PCIE PME is detected.

► **RTC**

When [Enabled], you can set the date and time at which the RTC (real-time clock) alarm awakens the system from suspend mode.

# Save & Exit

## ► Save Changes and Reset

Save changes to CMOS and reset the system.

## ► Discard Changes and Exit

Abandon all changes and exit the Setup Utility.

## ► Discard Changes

Abandon all changes.

## ► Load Optimized Defaults

Use this menu to load the default values set by the motherboard manufacturer specifically for optimal performance of the motherboard.

## ► Save as User Defaults

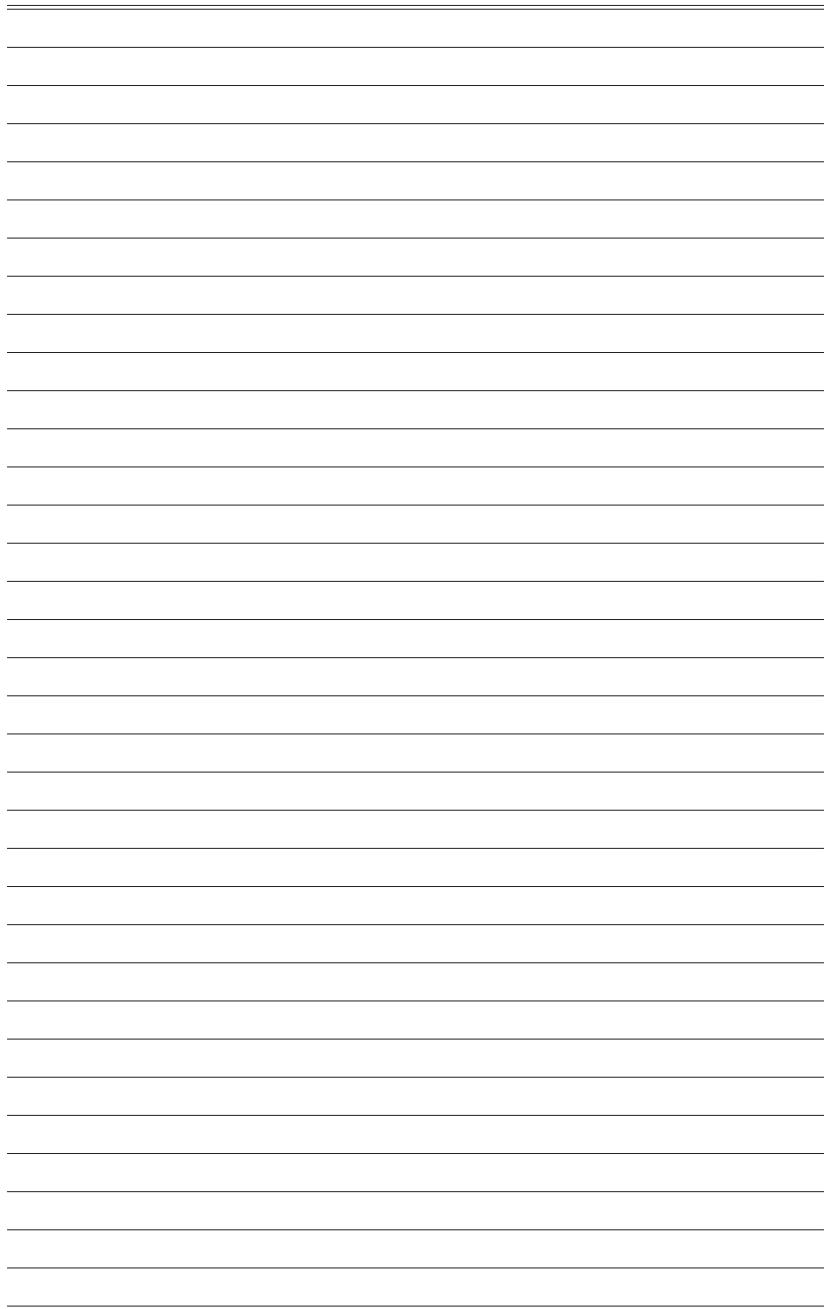

Save changes as the user's default profile.

## ► Restore User Defaults

Restore the user's default profile.

## ► Launch EFI Shell from filesystem device

This setting helps to launch the EFI Shell application from one of the available file system devices.

# *Appendix*

## GPIO WDT BKL Programming

This appendix provides WDT (Watch Dog Timer), GPIO (General Purpose Input/ Output) and LVDS Backlight programming guide.

# Abstract

In this document, code examples based on C programming language are provided for customer interest. **Inportb**, **Outportb**, **Inportl** and **Outportl** are basic functions used for access IO ports and defined as following.

**Inportb:** Read a single 8-bit I/O port.

**Outportb:** Write a single byte to an 8-bit port.

**Inportl:** Reads a single 32-bit I/O port.

**Outportl:** Write a single long to a 32-bit port.

# General Purposed IO

## 1. General Purposed IO – GPIO/DIO

The GPIO port configuration addresses are listed in the following table:

| Name   | IO Port | IO address | Name   | IO Port | IO address |
|--------|---------|------------|--------|---------|------------|
| N_GPIO | 0x42    | Bit 1      | N_GPO0 | 0x41    | Bit 0      |
| N_GPI1 | 0x42    | Bit 2      | N_GPO1 | 0x11    | Bit 3      |
| N_GPI2 | 0x42    | Bit 3      | N_GPO2 | 0x11    | Bit 6      |
| N_GPI3 | 0x22    | Bit 3      | N_GPO3 | 0x11    | Bit 7      |
| N_GPI4 | 0x22    | Bit 4      | N_GPO4 | 0x21    | Bit 0      |
| N_GPI5 | 0x22    | Bit 5      | N_GPO5 | 0x21    | Bit 1      |
| N_GPI6 | 0x22    | Bit 6      | N_GPO6 | 0x21    | Bit 2      |
| N_GPI7 | 0x22    | Bit 7      | N_GPO7 | 0x11    | Bit 4      |

**Note:** GPIO should be accessed through controller device **0x6E** on SMBus. The associated access method in examples (**SMBus\_.ReadByte**, **SMBus\_WriteByte**) are provided in part 4.

### 1.1 Set output value of GPO

1. Read the value from GPO port.
2. Set the value of GPO address.
3. Write the value back to GPO port.

**Example:** Set N\_GPO0 output “high”

```
val =SMBus_ReadByte (0x6E, 0x41); // Read value from N_GPO0 port through SMBus.
val = val | (1<<0); // Set N_GPO0address (bit 0) to 1 (output "high").
SMBus_WriteByte (0x6E, 0x41, val); // Write back to N_GPO0 port through SMBus.
```

**Example:** Set N\_GPO1 output “low”

```
val = SMBus_ReadByte (0x6E, 0x11); // Read value from N_GPO1 port through SMBus..
val = val & (~(1<<3)); // Set N_GPO1 address (bit 3) to 0 (output "low").
SMBus_WriteByte (0x6E, 0x11, val); // Write back to N_GPO1 port through SMBus.
```

### 1.2 Read input value from GPI:

1. Read the value from GPI port.
2. Get the value of GPI address.

**Example:** Get N\_GPI2 input value.

```
val = SMBus_ReadByte (0x6E, 0x42); // Read value from N_GPI2 port through SMBus.
val = val & (1<<3); // Read N_GPI2 address (bit 3).
if (val) printf ("Input of N_GPI2 is High");
else printf ("Input of N_GPI2 is Low");
```

**Example:** Get N\_GPI6 input value.

```
val = SMBus_ReadByte (0x6E, 0x22); // Read value from N_GPI6 port through SMBus.
val = val & (1<<6); // Read N_GPI6 address (bit 6).
if (val) printf ("Input of N_GPI6 is High");
else printf ("Input of N_GPI6 is Low");
```

# Watchdog Timer

## 2. Watchdog Timer – WDT

The base address (WDT\_BASE) of WDT configuration registers is **0xA10**.

### 2.1 Set WDT Time Unit

```
val = Inportb (WDT_BASE + 0x05);           // Read current WDT setting
val = val | 0x08;                      // minute mode. val = val & 0xF7 if second mode
Outportb (WDT_BASE + 0x05, val);          // Write back WDT setting
```

### 2.2 Set WDT Time

```
Outportb (WDT_BASE + 0x06, Time);        // Write WDT time, value 1 to 255.
```

### 2.3 Enable WDT

```
val = Inportb (WDT_BASE + 0x0A);           // Read current WDT_PME setting
val = val | 0x01;                          // Enable WDT OUT: WDOUT_EN (bit 0) set to 1.
Outportb (WDT_BASE + 0x0A, val);          // Write back WDT setting.
val = Inportb (WDT_BASE + 0x05);           // Read current WDT setting
val = val | 0x20;                          // Enable WDT by set WD_EN (bit 5) to 1.
Outportb (WDT_BASE + 0x05, val);          // Write back WDT setting.
```

### 2.4 Disable WDT

```
val = Inportb (WDT_BASE + 0x05);           // Read current WDT setting
val = val & 0xDF;                         // Disable WDT by set WD_EN (bit 5) to 0.
Outportb (WDT_BASE + 0x05, val);          // Write back WDT setting.
```

### 2.5 Check WDT Reset Flag

If the system has been reset by WDT function, this flag will set to 1.

```
val = Inportb (WDT_BASE + 0x05);           // Read current WDT setting.
val = val & 0x40;                          // Check WDTMOUT_STS (bit 6).
if (val)    printf ("timeout event occurred");
else      printf ("timeout event not occurred");
```

### 2.6 Clear WDT Reset Flag

```
val = Inportb (WDT_BASE + 0x05);           // Read current WDT setting
val = val | 0x40;                          // Set 1 to WDTMOUT_STS (bit 6);
Outportb (WDT_BASE + 0x05, val);          // Write back WDT setting
```

# LVDS Backlight Brightness Control

## 3. LVDS Backlight Brightness Control

The LVDS controller support 17 level of backlight brightness value from 0 (30%) to 16 (100%) and it is accessible through SMBus. The associated access method (`SMBus_ReadByte`, `SMBus_WriteByte`) are provided in part 4.

### 3.1 Set the Level of LVDS Backlight

1. Write **0xED** into address **0x7F** on SMBus device **0x42**.
2. Write desired backlight level from **0x0** (30%) to **0x10** (100%) into address **0x6E** on SMBus device **0x42**.

**Example:** Set LVDS backlight level to **0x10** (100%)

```
SMBus_WriteByte (0x42, 0x7F, 0xED);
SMBus_WriteByte (0x42, 0x6E, 0x10); // Set brightness to 100%
```

### 3.2 Read the Level of LVDS Backlight

1. Write **0xED** into address **0x7F** on SMBus device **0x42**.
2. Read current backlight level from address **0x6E** on SMBus device **0x42**.

**Example:** Get LVDS backlight level

```
SMBus_WriteByte (0x42, 0x7F, 0xED);
BKL_Value = SMBus_ReadByte (0x42, 0x6E);
```

# SMBus Access

## 4. SMBus Access

The base address of SMBus must be known before access. The relevant bus and device information are as following.

```
#define IO_SC          0xCF8
#define IO_DA          0xCFC
#define PCIBASEADDRESS 0x80000000
#define PCI_BUS_NUM    0
#define PCI_DEV_NUM    31
#define PCI_FUN_NUM    4
```

### 4.1 Get SMBus Base Address

```
int SMBUS_BASE;
int DATA_ADDR = PCIBASEADDRESS + (PCI_BUS_NUM<<16) +
                (PCI_DEV_NUM<<11) +
                (PCI_FUN_NUM<<8);

Outportl (DATA_ADDR + 0x20, IO_SC);
SMBUS_BASE = Inportl (IO_DA) & 0xfffffff0;
```

### 4.2 SMBus\_ReadByte (char DEVID, char offset)

Read the value of OFFSET from SMBus device DEVID.

```
Outportb (LOWORD (SMBUS_BASE), 0xFE);
Outportb (LOWORD (SMBUS_BASE) + 0x04, DEVID + 1); //out Base + 04, (DEVID + 1)
Outportb (LOWORD (SMBUS_BASE) + 0x03, OFFSET); //out Base + 03, OFFSET
Outportb (LOWORD (SMBUS_BASE) + 0x02, 0x48); //out Base + 02, 48H
mdelay (20); //delay 20ms to let data ready
while ((Inportl (SMBUS_BASE) & 0x01) != 0); //wait SMBus ready
SMB_DATA = Inportb (LOWORD (SMBUS_BASE) + 0x05); //input Base + 05
```

### 4.3 SMBus\_WriteByte (char DEVID, char offset, char DATA)

Write DATA to OFFSET on SMBus device DEVID.

```
Outportb (LOWORD (SMBUS_BASE), 0xFE);
Outportb (LOWORD (SMBUS_BASE) + 0x04, DEVID); //out Base + 04, (DEVID)
Outportb (LOWORD (SMBUS_BASE) + 0x03, OFFSET); //out Base + 03, OFFSET
Outportb (LOWORD (SMBUS_BASE) + 0x05, DATA); //out Base + 05, DATA
Outportb (LOWORD (SMBUS_BASE) + 0x02, 0x48); //out Base + 02, 48H
mdelay (20); //wait 20ms
```
