IPMI Setup User's Manual

1st Ed –12 August 2024

FCC Statement

THIS DEVICE COMPLIES WITH PART 15 FCC RULES. OPERATION IS SUBJECT TO THE FOLLOWING TWO CONDITIONS:

- (1) THIS DEVICE MAY NOT CAUSE HARMFUL INTERFERENCE.
- (2) THIS DEVICE MUST ACCEPT ANY INTERFERENCE RECEIVED INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRE OPERATION.

THIS EQUIPMENT HAS BEEN TESTED AND FOUND TO COMPLY WITH THE LIMITS FOR A CLASS "A" DIGITAL DEVICE, PURSUANT TO PART 15 OF THE FCC RULES.

THESE LIMITS ARE DESIGNED TO PROVIDE REASONABLE PROTECTION AGAINST HARMFUL INTERFERENCE WHEN THE EQUIPMENT IS OPERATED IN A COMMERCIAL ENVIRONMENT. THIS EQUIPMENT GENERATES, USES, AND CAN RADIATE RADIO FREQUENCY ENERGY AND, IF NOT INSTALLED AND USED IN ACCORDANCE WITH THE INSTRUCTION MANUAL, MAY CAUSE HARMFUL INTERFERENCE TO RADIO COMMUNICATIONS.

OPERATION OF THIS EQUIPMENT IN A RESIDENTIAL AREA IS LIKELY TO CAUSE HARMFUL INTERFERENCE IN WHICH CASE THE USER WILL BE REQUIRED TO CORRECT THE INTERFERENCE AT HIS OWN EXPENSE.

Notice

This guide is designed for experienced users to setup the system within the shortest time. For detailed information, please always refer to the electronic user's manual.

Copyright Notice

No part of this document may be reproduced, copied, translated, or transmitted in any form or by any means, electronic or mechanical, for any purpose, without the prior written permission of the original manufacturer.

Trademark Acknowledgement

Brand and product names are trademarks or registered trademarks of their respective owners.

Disclaimer

Avalue Technology Inc. reserves the right to make changes, without notice, to any product, including circuits and/or software described or contained in this manual in order to improve design and/or performance. Avalue Technology assumes no responsibility or liability for the

use of the described product(s), conveys no license or title under any patent, copyright, or masks work rights to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified. Applications that are described in this manual are for illustration purposes only. Avalue Technology Inc. makes no representation or warranty that such application will be suitable for the specified use without further testing or modification.

Life Support Policy

Avalue Technology's PRODUCTS ARE NOT FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE PRIOR WRITTEN APPROVAL OF Avalue Technology Inc.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into body, or (b) support or sustain life and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

A Message to the Customer

Avalue Customer Services

Each and every Avalue's product is built to the most exacting specifications to ensure reliable performance in the harsh and demanding conditions typical of industrial environments. Whether your new Avalue device is destined for the laboratory or the factory floor, you can be assured that your product will provide the reliability and ease of operation for which the name Avalue has come to be known.

Your satisfaction is our primary concern. Here is a guide to Avalue's customer services. To ensure you get the full benefit of our services, please follow the instructions below carefully.

Technical Support

We want you to get the maximum performance from your products. So if you run into technical difficulties, we are here to help. For the most frequently asked questions, you can easily find answers in your product documentation. These answers are normally a lot more detailed than the ones we can give over the phone. So please consult the user's manual

HPS-ERSD4A User's Manual

first.

To receive the latest version of the user's manual; please visit our Web site at:

www.avalue.com

Product Warranty

Avalue warrants to you, the original purchaser, that each of its products will be free from defects in materials and workmanship for two years from the date of purchase.

This warranty does not apply to any products which have been repaired or altered by persons other than repair personnel authorized by Avalue, or which have been subject to misuse, abuse, accident or improper installation. Avalue assumes no liability under the terms of this warranty as a consequence of such events. Because of Avalue's high quality-control standards and rigorous testing, most of our customers never need to use our repair service. If any of Avalue's products is defective, it will be repaired or replaced at no charge during the warranty period. For out-of-warranty repairs, you will be billed according to the cost of replacement materials, service time, and freight. Please consult your dealer for more details. If you think you have a defective product, follow these steps:

1. Collect all the information about the problem encountered. (For example, CPU type and speed, Avalue's products model name, hardware & BIOS revision number, other hardware and software used, etc.) Note anything abnormal and list any on-screen messages you get when the problem occurs.
2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information available.
3. If your product is diagnosed as defective, obtain an RMA (return material authorization) number from your dealer. This allows us to process your good return more quickly.
4. Carefully pack the defective product, a complete Repair and Replacement Order Card and a photocopy proof of purchase date (such as your sales receipt) in a shippable container. A product returned without proof of the purchase date is not eligible for warranty service.
5. Write the RMA number visibly on the outside of the package and ship it prepaid to your dealer.

Glossary & Abbreviation

Glossary & Abbreviation	Explanation
BMC	Baseboard Management Controller, this is the common abbreviation for an IPMI Baseboard Management Controller
BMC	Integrated Baseboard Management Controller, this is the name for the 2nd generation of BMC hardware, we use AST2600 on Platform
IMM	Integrated Management Module, this means the same as BMC
IPMI	Intelligent Platform Management Interface, a standardized system management interface
IPMB	Intelligent Platform Management Bus, I2C based bus
SOL	Serial Over LAN, Host serial port traffic redirected over a LAN connection for remote control and management
SDR	Sensor Data Record, A data record that provides platform management sensor type, locations, event generation, and access information
Serial Port Sharing	Ability to share a serial connector between the BMC's serial controller and a system serial controller by using circuitry to allow it to be switched between the two
POST	Power On Self Test
OEM	Original Equipment Manufacturer
FRU	Field Replaceable Unit
VPD	Vital Product Data, this is the term given to system component manufacturing information such as, but not limited to, serial number and FRU part number
SEL	System Event Log
SMS	System Management Software
SMM	System Management Mode
NMI	Non Maskable Interrupt
SMI	System Management Interrupt
IERR	Internal Error. A signal from the Intel Architecture processors indicating an internal error condition
PERR	Parity Error. A signal on the PCI bus that indicates a parity error on the bus
SERR	System Error. A signal on the PCI bus that indicates a 'fatal' error on the bus
PECI	Platform Environment Control Interface
FRB	Fault Resilient Booting

Button	Power button System Reset button
CPLD	Intel 10M25DAF484C8G
Firmware Vendor of Code Base	AMI MegaRAC 13.3

1.3 I2C BLOCK DIAGRAM

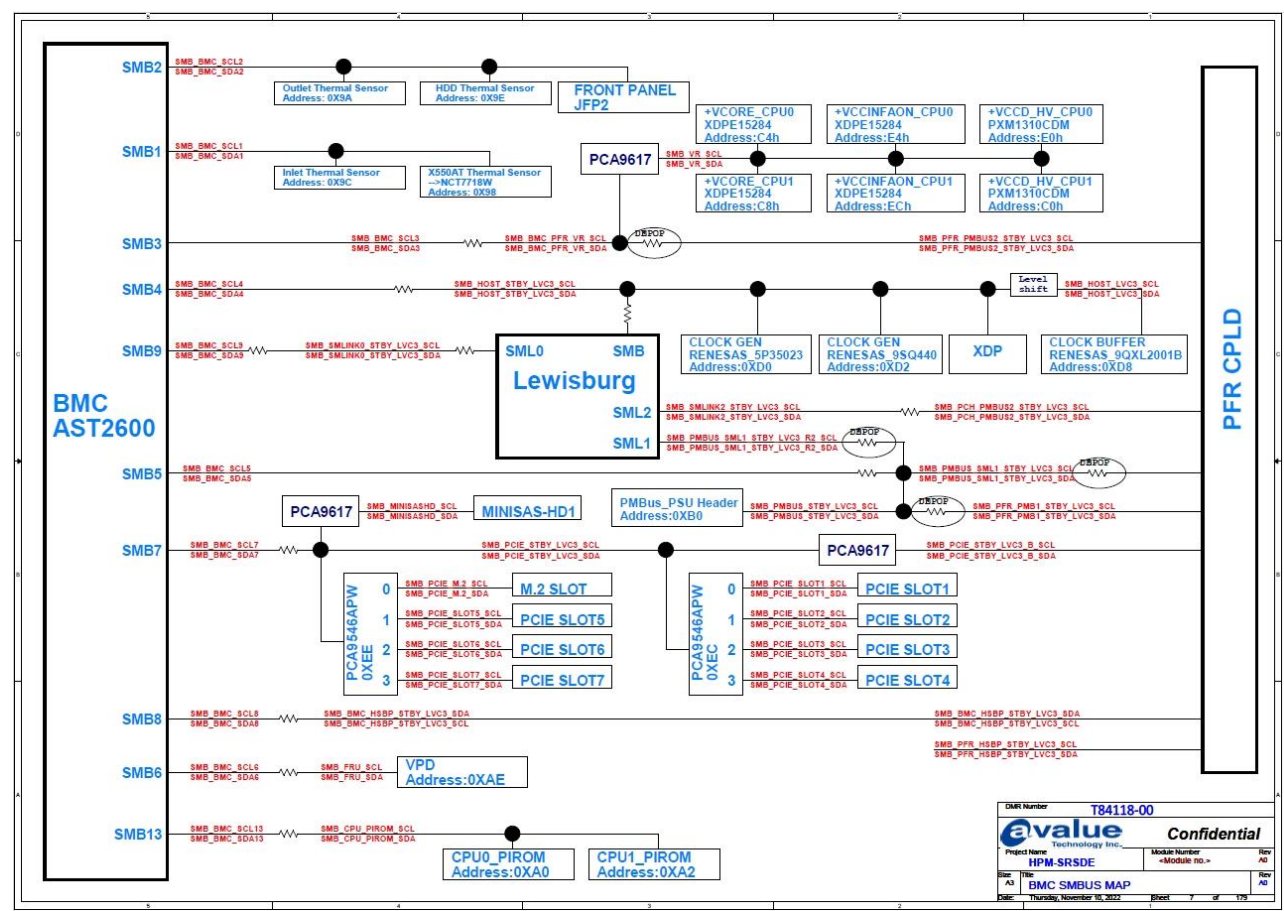

Figure 1-2 I2c block diagram

1.4 I2CBUS ACCESS

The BMC provides the Master Write-Read command via its interface with system software. The Master Write-Read command provides low-level access to non-intelligent devices on the IPMB, such as FRU SEEPROMs. The Master Write-Read command provides a subset of the possible I2C and SMBus operations that covers most I2C/SMBus-compatible devices. In addition to supporting non-intelligent devices on the IPMB, the Master Write-Read command also provides access to non-intelligent devices on Private Busses behind management controllers. The main purpose of this is to support FRU SEEPROMs on Private Busses.

Table 1-2 Master Write-Read Bus IDs

Physical Bus Number	Bus ID (channel no + bus ID + bus type)	Slave address	BMC use? (V)	Remark
1	0x2	0x9C	V	Inlet Thermal Sensor
		0x98	V	X550AT2 Thermal Sensor
2	0x4	0x9A	V	Outlet Thermal Sensor
		0x9E	V	HDD Thermal Sensor
3	0x6	0xC4	V	VCORE CPU0

2.6 HOME> SETTINGS

IPMI Interfaces

This page is used to configure the IPMI Interfaces. To open IPMI interfaces page, click **Settings >**

IPMI Interfaces.

This page displays the following interfaces like **IPMI Over LAN** and **IPMI Over KCS**.

Procedure

- **IPMI Over LAN** - Check or uncheck the IPMI Over LAN interface which allows the user to perform IPMI communication over LAN.
- **IPMI Over KCS** - Check or uncheck the IPMI Over KCS interface which allows the user to perform IPMI communication over KCS.

Note: IPMI Communication will not be performed over LAN /KCS interface if it is disabled.

- **Save:** Click **Save** to save the configured interfaces.

Item	Description
Captured BSOD	Captured snapshot of BSOD if the host system crashed
Date & Time	Set the date and time on the BMC
External User Services	Configure server settings to authenticate users
KVM Mouse Setting	Some settings of mouse emulation for KVM
Log Settings	Log settings for SEL log and Audit log
Media Redirection Settings	Configure the media into BMC for redirection
Network Settings	Configure the network settings for the available LAN channels

PAM Order Settings	Configure the PAM ordering for user authentication in to the BMC
Platform Event Filter	Configure Event Severity to trigger alert or power action
Services	Allow Administrator to modify services contain web/kvm/media/ssh.
SMTP Settings	E-mail message is one of alert and set SMTP for e-mail transmission across IP networks.
SSL Settings	SSL Certificate for secure transactions between webserver and browsers
System Firewall	Configure the firewall settings
User Management	Add a new user and modify or delete the existing users
IPMI Interfaces	Configure the IPMI Interfaces, IPMI Communication will not be performed over LAN/KCS interface if it is disabled.

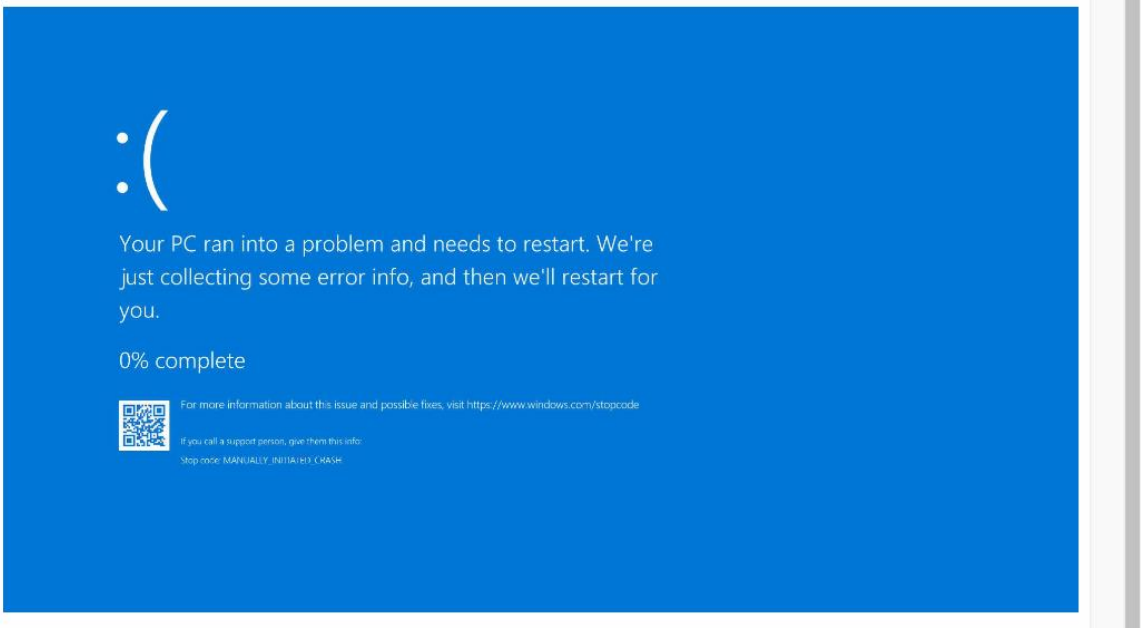

2.6.1 Home> Settings >Capture BSOD

This page displays a snapshot of the blue screen captured at the time when/if the host system crashed since the last reboot.

Note: KVM service should be-enabled to display the BSOD. This can be configured under 'Settings ->Services->KVM'.

BMC captured last BSOD screen if system occurred BSOD.

2.6.9.3 Home>Settings>Platform Event Filters>LAN Destinations

This shows all LAN destination slots. You can modify or add a new LAN destination entry from here.

Click x icon to delete an entry from the list.

A maximum of 15 slots are available.

Select an applicable LAN Channel from the list

Send Test Alert: Select a configured slot and click 'Send Test Alert' to generate a sample alert message to the configured destination.

Note: Test alert for emails can be sent only when SMTP configuration is enabled. This can be done under 'Settings->SMTP'. Make suer that SMTP server address and port numbers are configured properly.

☐ Record Video to Remote Server

Save

Item	Option	Description
Log Size (KB)	<input type="text"/>	Enter the preferred size for the log file. Maximum log file size is 128KB.

Log File Count	<input type="text"/>	Enter whether you want to have log files. Maximum log file count is 1
Record Video to Remote Server	<input checked="" type="checkbox"/> <input type="checkbox"/>	To enable or disable Remote Video support, check or uncheck the 'Enable' checkbox respectively. Note: By default video files will be stored in local path of BMC. If remote video support is enabled then the video files will be stored only in remote path, not within BMC.
Save	 Save	Click button to save the changes made

2.6.15.8 Home>Settings>Video Recording>Sol Settings>SOL Recorded video

Below is a list of recorded video files.

Note:

By default, video files will be stored in the local path of the BMC.

If the remote video support is enabled, then the video files will be stored only in the remote path, and not within the BMC.

Click on icon to download and save the file

Click on icon to delete the selected video.

2.7 HOME> REMOTE CONTROL

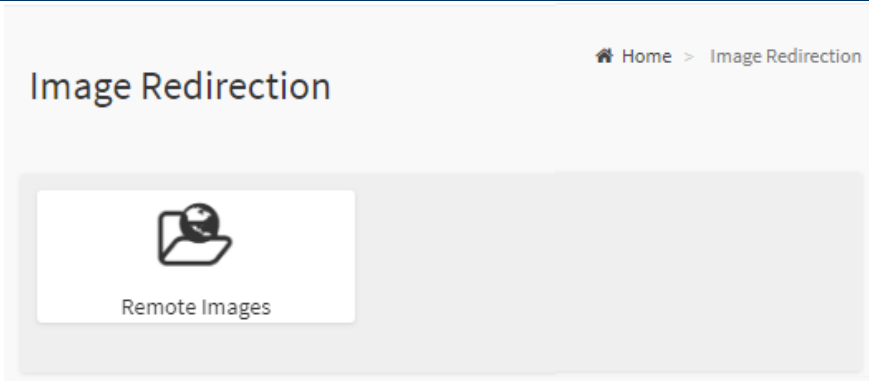

2.7.1 Home>Remote Control >H5Viewer

2.7.2 Home>Remote Control >Serial Over LAN

2.8 HOME>IMAGE REDIRECTION

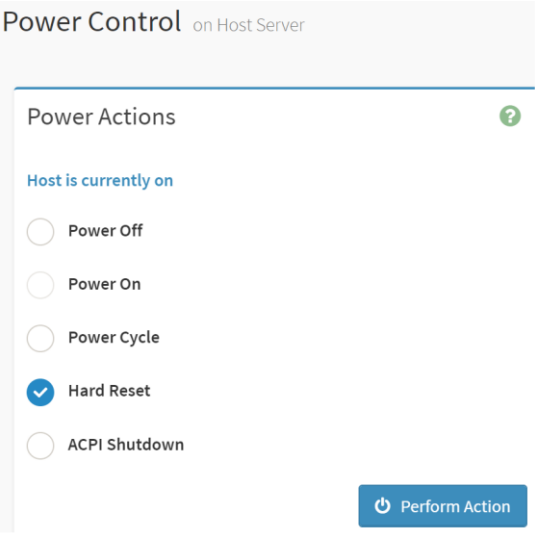

2.8.1 Home >Image Redirection>Remote Media

The displayed table shows remote images available to the BMC. You can start redirection or clear the image from here. Up to 4 images can be added for each image type, depending on your configuration.

2.9 HOME> POWER CONTROL

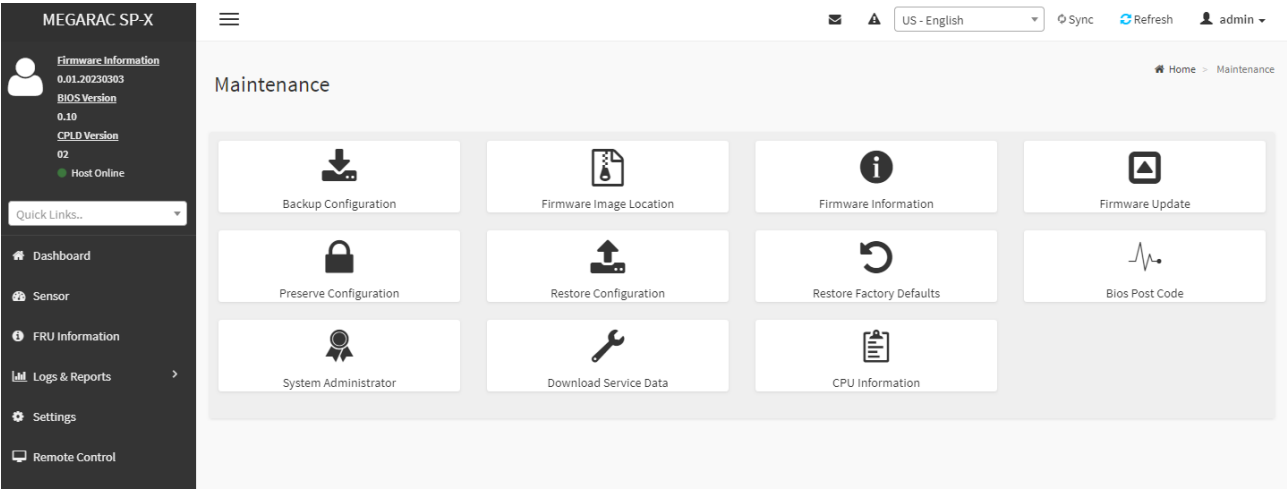

✓ If user first open Power Control page ,this icon means host is currently on this power stage.

Item	Option	Description
------	--------	-------------

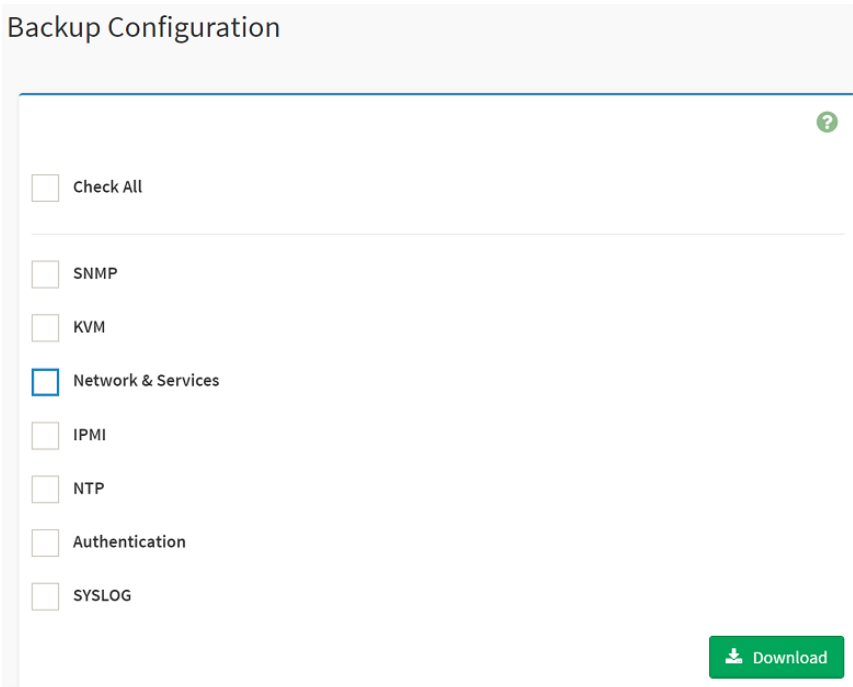

Power Control	 Power Off	Select this option to power off the server
	 Power On	Select this option to power on the server
	 Power Cycle	Select this option to first power off, and then reboot the system (cold boot)
	 Hard Reset	Select this option to reboot the system without powering off (warm boot)
	 ACPI Shutdown	Select this option to initiate operating system shutdown prior to the shutdown
Perform Action	 Perform Action	Click button to perform the selected power action above immediately

2.10 HOME> MAINTENANCE

2.10.1 Home>Maintenance >Backup Configuration

Check the component that needs to be backed up. You will be able to save the backup config file to a location of your choice. That saved file can be used to restore the configuration when needed.

Item	Option	Description
Check All	<div><input checked="" type="checkbox"/></div> <div><input type="checkbox"/></div>	Set all following check box as checked
SNMP	<div><input checked="" type="checkbox"/></div> <div><input type="checkbox"/></div>	Select this option to backup SNMP configuration
KVM	<div><input checked="" type="checkbox"/></div>	Select this option to backup KVM configuration

	<input type="checkbox"/>	
Network & Services	<input checked="" type="checkbox"/> <input type="checkbox"/>	Select this option to backup Network & Services configuration
IPMI	<input checked="" type="checkbox"/> <input type="checkbox"/>	Select this option to backup IPMI configuration
NTP	<input checked="" type="checkbox"/> <input type="checkbox"/>	Select this option to backup NTP configuration
Authentication	<input checked="" type="checkbox"/> <input type="checkbox"/>	Select this option to backup Authentication configuration
SYSLOG	<input checked="" type="checkbox"/> <input type="checkbox"/>	Select this option to backup SYSLOG configuration
Download		Click this button to backup selected config above as a file.

2.10.2 Home>Maintenance >Firmware Image Location

Protocol to be used to transfer the firmware image onto the BMC

Firmware Image Location

Image Location Type

☒ Web Upload during flash

☐ TFTP Server

Item	Option	Description
Image Location Type	<ul style="list-style-type: none"> Web Upload during flash TFTP Server 	Type of location to transfer the fw image into the BMC either Web Update during flash or TFTP Server

APPENDIX-A BMC HARDWARE: AST2600

AST2600 is the 7th generation of Integrated Remote Management Processor introduced by ASPEED Technology Inc. It's a vastly integrated SOC device playing as a service processor to support various functions required for highly manageable server platforms. In this generation, the CPU performance is improved significantly by integrating 1.2GHz dual-core ARM Cortex A7 (r0p5) 32-bit CPU with FPU. Debug access is through ARM CoreSight SOC-400 into CPU. Additionally, most of the controllers are improved with more features or performance. AST2600 also supports more interfaces including PCIe Gen2 1x bus interface and root complex which can make BMC to have expended control capacity. New adopted DisplayPort 1.1a also fits next generation display interface. Finally real secure boot function with secure OTP memory can improve the BMC security. Figure-1 clearly illustrates the chip architecture of the BMC. The detailed features of the individual internal blocks will be described in the following chapters.

The chip architecture is showed below:

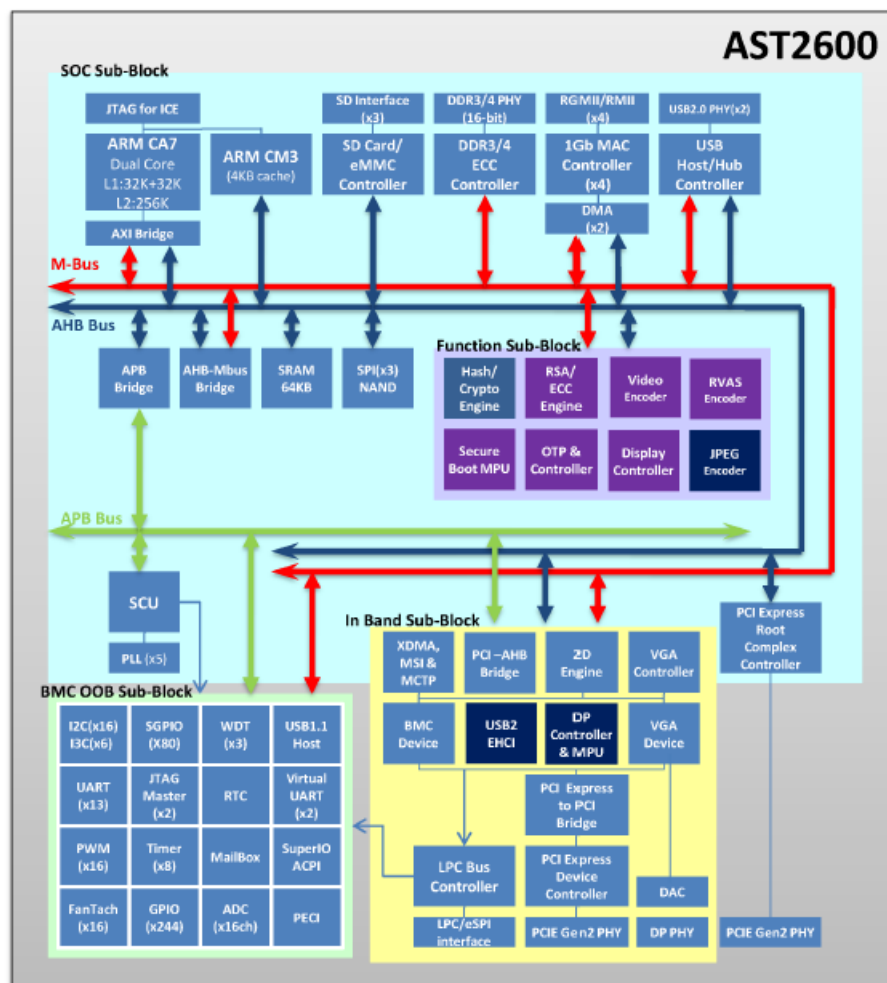

Figure A-1 AST2600 Chip Architecture

HPS-ERSD4A User's Manual

The following list is a summary of the BMC management hardware features utilized by the BMC:

- Embedded dual-core ARM Cortex A7 32-bit RISC CPU (r0p5). Max. 1.2GHz
- Embedded one more 32-bit ARM Cortex M3 CPU (r2p1). Max. 200MHz.
- Built-in PCI Express 2.0 Bridge Controller & PCI Express Gen 2 PHY
- Built-in PCI Express 2.0 Root Complex Controller & PCI Express Gen 2 PHY
- VGA Display Controller
- Video Compression Engine
- Four 10/100/1000 Mbps Fast Ethernet MAC
- DDR4 SDRAM Controller. Max. 800MHz
- Support 3 portion of internal SRAM buffer: 64KB or 24KB or 1KB
- System Control Unit
- AHB Controller
- Firmware SPI Memory Controller
- SPI Master Controller
- SD/SDIO/eMMC Host Controller
- USB2.0 Virtual Hub Controller
- USB2.0\1.1 Device Controller & USB2.0\1.1 Host Controller
- 64-bit 2D Graphics Accelerator
- 16 sets of multi-function I2C/SMBus Serial Interface Controller
- 6 sets MIPI I3C Serial Interface Controller
- GPIO Controller. Support up to 244 GPIO pins, which are 31 sets
- Master Serial GPIO Controller. Support 2 masters: 1st 128 In/Out; 2nd 80 In/Out
- Slave serial GPIO monitor. Support 2 sets: max 32 drives for each channel
- Fan Tachometer Controller. Up to 16 tachometer inputs
- PWM Controller. Up to 16 PWM outputs
- Hardware Secure Boot
- UART (16550) Controllers. Up to 3686.4K baud-rate except UART5 921.6K baud-rate
- Built-in 8 sets of 32-bit Timer modules
- Built-in 8 sets of 32-bit Watchdog Timer modules
- 64 bytes Battery Backed SRAM
- LPC Bus Interfaces
- eSPI interface
- System SPI Flash Controller
- Super I/O controller
- Hash & Crypto Engine
- RTC Time Clock

ADC Controller. 16 sets of 10 bits analog-to-digital converter

Intel PECL 4.1 Compliant

JTAG Master Controller

MCTP Controller

MSI Controller

X-DMA Controller

The more information can refer to the Datasheet of AST2600.

APPENDIX-B IPMI COMMANDS SUPPORT TABLE

All option commands and all option parameters of mandatory commands in the command list below are not insured for supporting. Some mandatory commands may be not supported according to FW PRD.

Command	NetFn	CM D	M/ O	Supporte d	Comments
IPMI Device “Global” Commands					
Get Device ID	App	01h	M	V	
Broadcast 'Get Device ID'[1]	App	01h	M		
Cold Reset	App	02h	O	V	
Warm Reset	App	03h	O	V	
Get Self Test Results	App	04h	M	V	
Manufacturing Test On	App	05h	O	V	need password
Set ACPI Power State	App	06h	O	V	
Get ACPI Power State	App	07h	O	V	
Get Device GUID	App	08h	O	V	
Get NetFn Support	App	09h	O	V	
Get Command Support	App	0Ah	O	V	
Get Command Sub-function Support	App	0Bh	O	V	
Get Configurable Commands	App	0Ch	O	V	
Get Configurable Command Sub-functions	App	0Dh	O	V	
Set Command Enables	App	60h	O		
Get Command Enables	App	61h	O	V	
Set Command Sub-function Enables	App	62h	O		
Get Command Sub-function Enables	App	63h	O		
Get OEM NetFn IANA Support	App	64h	O	V	
BMC Watchdog Timer Commands					
Reset Watchdog Timer	App	22h	M	V	
Set Watchdog Timer	App	24h	M	V	
Get Watchdog Timer	App	25h	M	V	
BMC Device and Messaging Commands					
Set BMC Global Enables	App	2Eh	M	V	"Only Supported: SEL Logging Enable / Disable, Event message buffer Enable/disable"
Get BMC Global Enables	App	2Fh	M	V	
Clear Message Flags	App	30h	M	V	
Get Message Flags	App	31h	M	V	
Enable Message Channel Receive	App	32h	O	V	
Get Message	App	33h	M	V	
Send Message	App	34h	M	V	not support Send Raw
Read Event Message Buffer	App	35h	O	V	
Get BT Interface Capabilities	App	36h	O	V	
Get System GUID	App	37h	O	V	

Get Channel Authentication Capabilities	App	38h	O	V	
Get Session Challenge	App	39h	O	V	
Activate Session	App	3Ah	O	V	
Set Session Privilege Level	App	3Bh	O	V	
Close Session	App	3Ch	O	V	
Get Session Info	App	3Dh	O	V	
Get AuthCode	App	3Fh	O	V	
Set Channel Access	App	40h	M	V	"Only support: disabled, always available, shared mode"
Get Channel Access	App	41h	M	V	
Get Channel Info Command	App	42h	O	V	
Set User Access Command	App	43h	O	V	Not support user session limit
Get User Access Command	App	44h	O	V	
Set User Name	App	45h	O	V	
Get User Name Command	App	46h	O	V	
Set User Password Command	App	47h	O	V	
Activate Payload	App	48h	O	V	
Deactivate Payload	App	49h	O	V	
Get Payload Activation Status	App	4Ah	O	V	
Get Payload Instance Info	App	4Bh	O	V	
Set User Payload Access	App	4Ch	O	V	
Get User Payload Access	App	4Dh	O	V	
Get Channel Payload Support	App	4Eh	O	V	
Get Channel Payload Version	App	4Fh	O	V	
Get Channel OEM Payload Info	App	50h	O	V	
Master Write-Read	App	52h	M	V	
Get Channel Cipher Suites	App	54h	O	V	
Suspend/Resume Payload Encryption	App	55h	O	V	
Set Channel Security Keys	App	56h	O	V	
Get System Interface Capabilities	App	57h	O	V	Only 01h(KCS) is supported
Set System Info Parameters	App	58h	O	V	
Get System Info Parameters	App	59h	O	V	
Chassis Device Commands					
Get Chassis Capabilities	Chassis	00h	M	V	
Get Chassis Status	Chassis	01h	M	V	
ChassisControl	Chassis	02h	M	V	
Chassis Reset	Chassis	03h	O		This command is combined to Chassis Control command in IPMI v1.5
Chassis Identify	Chassis	04h	O	V	
Set Chassis Capabilities	Chassis	05h	O	V	
Set Power Restore Policy	Chassis	06h	O		
Get System Restart Cause	Chassis	07h	O	V	Only 01h (cycle,hardware reset), 04h,8h,9h supported
Set System Boot Options	Chassis	08h	O	V	
Get System Boot Options	Chassis	09h	O	V	
Set Front Panel Button Enables	Chassis	0Ah	O		
Set Power Cycle Interval	Chassis	0Bh	O	V	
Get POH Counter	Chassis	0Fh	O	V	
Event Commands					
Set Event Receiver	S/E	00h	M	V	
Get Event Receiver	S/E	01h	M	V	
Platform Event (a.k.a. "Event Message")	S/E	02h	M	V	
PEF and Alerting Commands					
Get PEF Capabilities	S/E	10h	M	V	

HPS-ERSD4A User's Manual

Arm PEF Postpone Timer	S/E	11h	M	V	
Set PEF Configuration Parameters	S/E	12h	M	V	Does not support parameter 15.
Get PEF Configuration Parameters	S/E	13h	M	V	Does not support parameter 15.
Set Last Processed Event ID	S/E	14h	M	V	
Get Last Processed Event ID	S/E	15h	M	V	
Alert Immediate	S/E	16h	O	V	
PET Acknowledge	S/E	17h	O	V	
Sensor Device Commands					
Get Device SDR Info	S/E	20h	O	V	
Get Device SDR	S/E	21h	O	V	
Reserve Device SDR Repository	S/E	22h	O	V	
Get Sensor Reading Factors	S/E	23h	O	V	Support linear sensors only.
Set Sensor Hysteresis	S/E	24h	O	V	
Get Sensor Hysteresis	S/E	25h	O	V	
Set Sensor Threshold	S/E	26h	O	V	
Get Sensor Threshold	S/E	27h	O	V	
Set Sensor Event Enable	S/E	28h	O	V	
Get Sensor Event Enable	S/E	29h	O	V	
Re-arm Sensor Events	S/E	2Ah	O	V	
Get Sensor Event Status	S/E	2Bh	O	V	
Get Sensor Reading	S/E	2Dh	M	V	
Set Sensor Type	S/E	2Eh	O	V	
Get Sensor Type	S/E	2Fh	O	V	
Set Sensor Reading and Event Status	S/E	30h	O	V	Sensor should be settable (just for FW engineer debug purpose internally)
FRU Device Commands					
Get FRU Inventory Area Info	Storage	10h	M	V	
Read FRU Data	Storage	11h	M	V	
Write FRU Data	Storage	12h	M	V	
SDR Device Commands					
Get SDR Repository Info	Storage	20h	M	V	
Get SDR Repository Allocation	Storage	21h	O	V	
Reserve SDR Repository	Storage	22h	M	V	
Get SDR	Storage	23h	M	V	
Add SDR	Storage	24h	O	V	
Partial Add SDR	Storage	25h	M	V	
Delete SDR	Storage	26h	O		
Clear SDR Repository	Storage	27h	M	V	
Get SDR Repository Time	Storage	28h	O	V	
Set SDR Repository Time	Storage	29h	O		
Enter SDR Repository Update	Storage	2Ah	O		
Exit SDR Repository Update	Storage	2Bh	O		
Run Initialization Agent	Storage	2Ch	O	V	
SEL Device Commands					
Get SEL Info	Storage	40h	M	V	
Get SEL Allocation Info	Storage	41h	O	V	
Reserve SEL	Storage	42h	O	V	
Get SEL Entry	Storage	43h	M	V	
Add SEL Entry	Storage	44h	M	V	
Partial Add SEL Entry	Storage	45h	O	V	
Delete SEL Entry	Storage	46h	O	V	
Clear SEL	Storage	47h	M	V	
Get SEL Time	Storage	48h	M	V	
Set SEL Time	Storage	49h	M	V	
Get Auxiliary Log Status	Storage	5Ah	O		
Set Auxiliary Log Status	Storage	5Bh	O		

Get SEL Time UTC Offset	Storage	5Ch	O	V	
Set SEL Time UTC Offset	Storage	5Dh	O	V	
LAN Device Commands					
Set LAN Configuration Parameter	Transport	01h	M	V	param #9, 25 are not support
Get LAN Configuration Parameters	Transport	02h	M	V	param #9, 25 are not support
Suspend BMC ARPs	Transport	03h	O	V	
Get IP/UDP/RMCP Statistics	Transport	04h	O		
Serial/Modem Device Commands					
Set Serial/Modem Configuration	Transport	10h	M	V	
Get Serial/Modem Configuration	Transport	11h	M	V	
Set Serial/Modem Mux	Transport	12h	O	V	
Get TAP Response Codes	Transport	13h	O		
Set PPP UDP Proxy Transmit	Transport	14h	O		
Get PPP UDP Proxy Transmit	Transport	15h	O		
Send PPP UDP Proxy Packet	Transport	16h	O		
Get PPP UDP Proxy Receive	Transport	17h	O		
Callback	Transport	19h	O		
Set User Callback Options	Transport	1Ah	O		
Get User Callback Options	Transport	1Bh	O		
Set Serial Routing Mux Command	Transport	1Ch	O

APPENDIX-C IPMI OEM COMMANDS LIST

Command	NetFn	CMD	DATA Length	DATA Value	Comments
Set Fan Mode	0x30	01h	1	0~1	Input data: 0=standard speed , 1>manual speed
Get Fan Mode	0x30	30h	0		Response data: 0=standard speed , 1>manual speed
Set FRU Lock	0x30	31h	1	0~1	Input data: 0=disable FRU eeprom write protect 1=enable FRU eeprom write protect
Set Fan Speed	0x30	35h	2	Byte1 : 0~06h Byte2 : 0~64h	Input data: Byte 1 = fan number Byte2 = PWM duty cycle
Get Fan Speed	0x30	36h	0		Response data: Byte1 = CPU1_FAN pwm duty cycle Byte2 = SYS_FAN1pwm duty cycle Byte3 = SYS_FAN2 pwm duty cycle Byte4 = SYS_FAN3 pwm duty cycle Byte5 = SYS_FAN4 pwm duty cycle Byte6 = SYS_FAN5 pwm duty cycle Byte7 = SYS_FAN6 pwm duty cycle Byte8 = CPU2_FAN pwm duty cycle
Get BIOS Version	0x30	37h	0		Response data Byte1 = Low version Byte2 = High version
Get CPLD Version	0x30	39h	0		Response data Byte1 = Low version Byte2 = High version

APPENDIX-D SENSOR TABLE

IPMI provides a sixteen byte string identifier (Sensor ID) in each SDR. This ASCII based string will need to be interpreted by system management software (SMS) for display and alerting purposes. Sensors provided by BMC are listed in the following Table E-1:

Inlet-T	25 degrees C	ok
Outlet-T	40 degrees C	ok
CPU1-T	37 degrees C	ok
CPU2-T	38 degrees C	ns
PCH-T	42 degrees C	ok
VCORE_CPU1-T	45 degrees C	ok
VCCFA_CPU1-T	42 degrees C	ok
VCCINFAO_CPU1-T	43 degrees C	ok
VCCFA_E_CPU1-T	37 degrees C	ok
VCCD_HV_CPU1-T	33 degrees C	ok
VCORE_CPU2-T	33 degrees C	ok
VCCFA_CPU2-T	32 degrees C	ok
VCCINFAO_CPU2-T	32 degrees C	ok
VCCFA_E_CPU2-T	30 degrees C	ok
VCCD_HV_CPU2-T	28 degrees C	ok

APPENDIX-E DEFAULT CONFIGURATION

A host based utility will be available to configure the BMC. This utility can be used to set parameters such as IP address and other LAN parameters, and/or SEL and SDR time. The utilities include BIOS and IPMI utility. The host based utility has high priority to send command to BMC.

Table F-1 Default Configuration

Parameter Name	Default Value
User IDs	(User/Password/Privilege/Channels)
USER ID 1:	NULL/NULL/User/LAN
USER ID 2:	root/root/Administrator/LAN
LAN Channel	
IP Address Source	DHCP
IP Address	0.0.0.0
Subnet Mask	0.0.0.0
PEF Alerting	Disable
Per-message Authentication	Disable
User Level Authentication	Disable
Access Mode	Always Available
Privilege Level Limit	Administrator
SOL	
SOL Enable	Enable SOL payload
Payload Authentication/Authentication	Force encryption/ Authentication controlled by remote software
SOL Privilege Level Limit	Administrator
SOL non-volatile bit rate	115200 bps
SOL volatile bit rate	115200 bps
Power Restore Policy	chassis always powers up after AC on

APPENDIX-F FIRMWARE UPDATE

If necessary, the system firmware can be updated at local machine or remote console.
Please refer the following instructions.

1. BIOS + SPS

Update Method	OS	Tool and Jumper settings
Local Update	UEFI environment	AfuEfix64.efi Need to disable SPS by JPFLASHSEC1 jumper.
Remote Update	IPMI Web UI	No tool required No need to disable SPS.

1.1 BIOS + SPS update in UEFI environment

1. Format a USB flash drive to FAT32.

2. Download the update tool and BIOS file(xxx.bin), then save at the **root** directdory of the USB drive.

3. Plug the USB drive to the Server and close pin 2-3 of JPFLASHSEC1.

4. Power on system. When you hear BIOS ready beep, press **F11** to enter boot menu and select the USB drive to boot.

5. Type **fs*:** to enter the USB drive, for example **fs0:**.

```
EDK II
UEFI v2.70 (American Megatrends, 0x0005000E)
Mapping table
  FS0: Alias(s):HD0h0b:;BLK1:
        PciRoot(0x0)/Pci(0x14,0x0)/USB(0x7,0x0)/HD(1,MBR,0x1011BD0C,0x800,0x75
0040)
  BLK0: Alias(s):

Process completed.
```

8. Remove AC power and move **JPFLASHSEC1** jumper back to pin 1-2.
9. Power on, then boot to BIOS to check if BIOS version and SPS version are correct.

BIOS version:

SPS version:

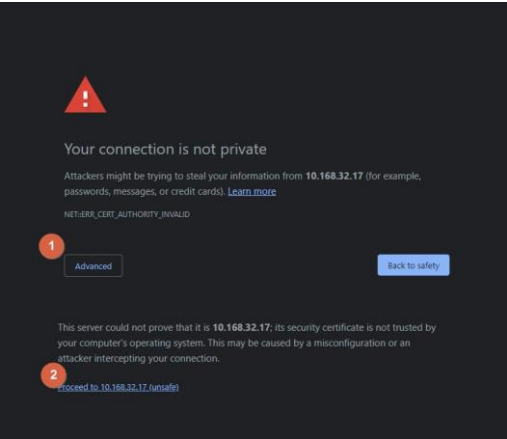

HPS-ERSD4A User's Manual

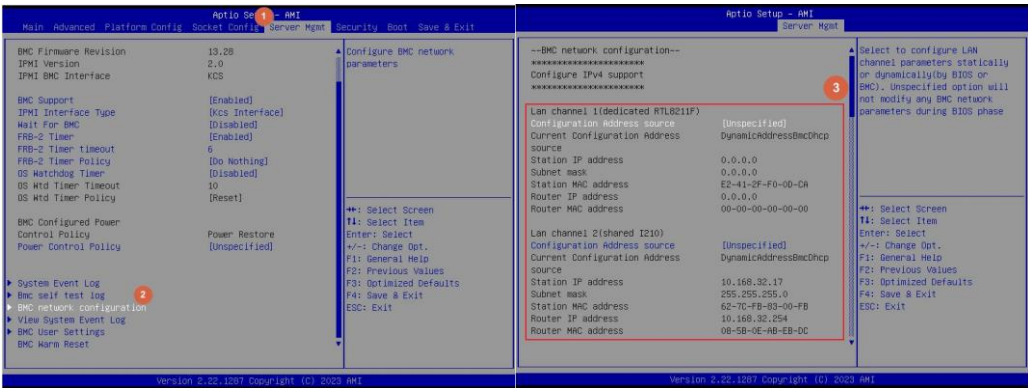

1.2 BIOS + SPS update using IPMI Web UI

1. Open web browser. Enter BMC IP address and log in. The default username and password are admin/admin.

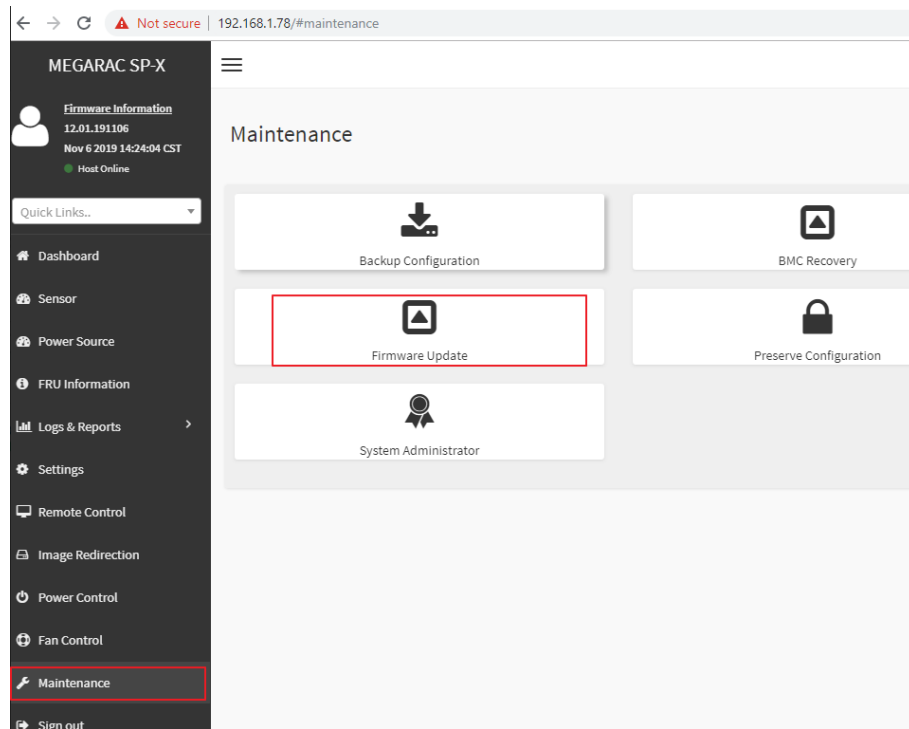

If you get a message that says “Your connection is not private”, just skip it.

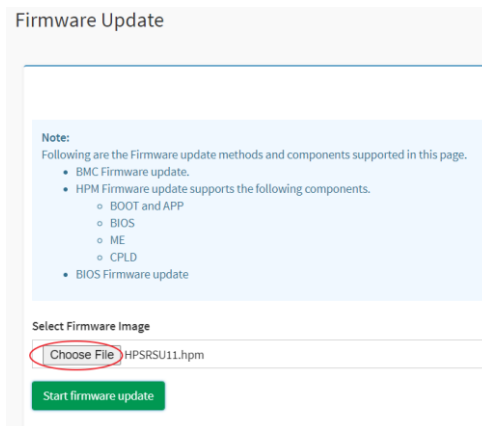

Note: BMC IP address can be configured at BIOS menu.

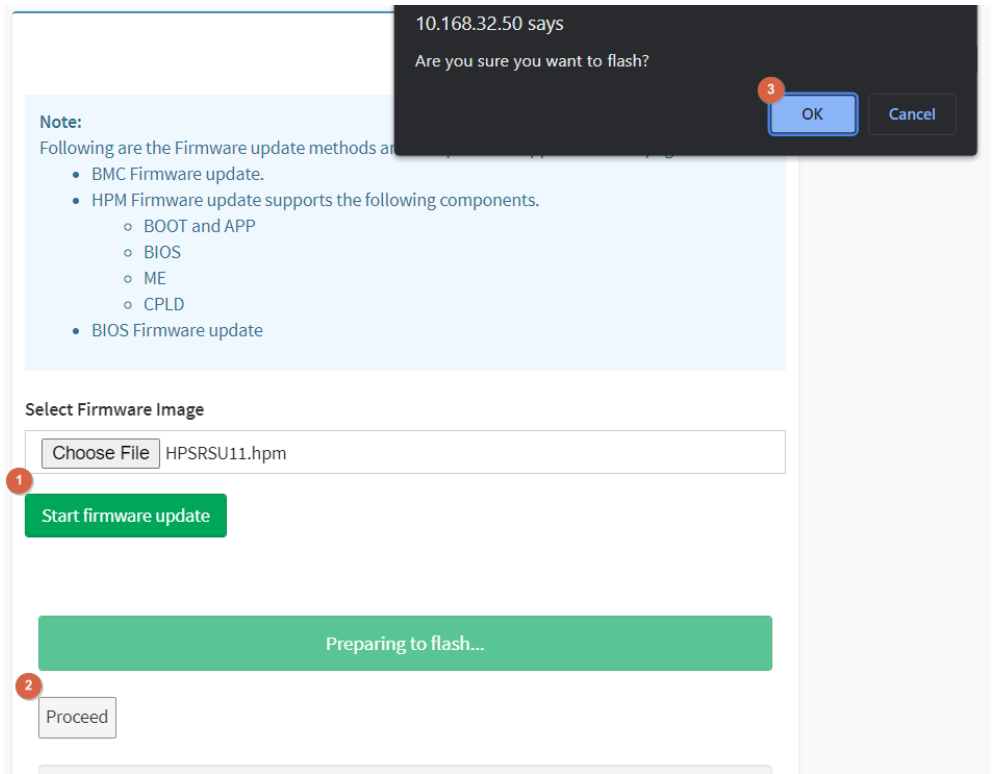

2. Click the **Maintenance** tab, then **Firmware Update**.

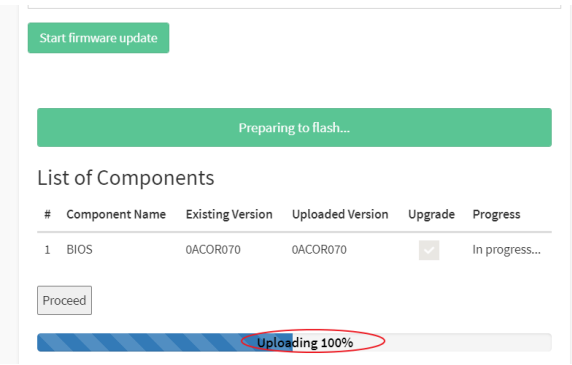

3. **Choose File** to select BIOS file(xxx.hpm).

4. Click the **Start firmware update** button, then **Proceed**. The message appears, “Are you sure you want to flash?”. Click **OK**.

5. When “Uploading 100%”, click **Preceed** again.

6. After finish the processs, BMC will reset after few seconds. Refer 1.1.1 step9 to check the BIOS and SPS version.

2. BIOS

Update Method	OS	Tool
Local Update	UEFI environment	AfuEfix64.efi

2.1 BIOS update in UEFI environment

1. Format a USB flash drive to FAT32.

2. Download the tool and BIOS file(xxx.bin) and save at the **root** directory of the USB drive.

3. Power on system. When you hear BIOS ready beep, press **F11** to enter boot menu and select the USB drive to boot.

HPS-ERSD4A User's Manual

4. Type **fs***: to enter the USB drive, for example **fs0**:

```
EDK II

3.2 BMC update using Web UI

1. Open web browser. Enter BMC IP address and log in. The default user name and password are admin/admin.

If you get a message that says “Your connection is not private”, just skip it.

Your connection is not private

Attackers might be trying to steal your information from **192.168.1.78** (for example, passwords, messages, or credit cards). [Learn more](#)

NET::ERR_CERT_AUTHORITY_INVALID

☐ Help improve Chrome security by sending URLs of some pages you visit, limited system information, and some page content to Google. [Privacy policy](#)

1

Hide advanced

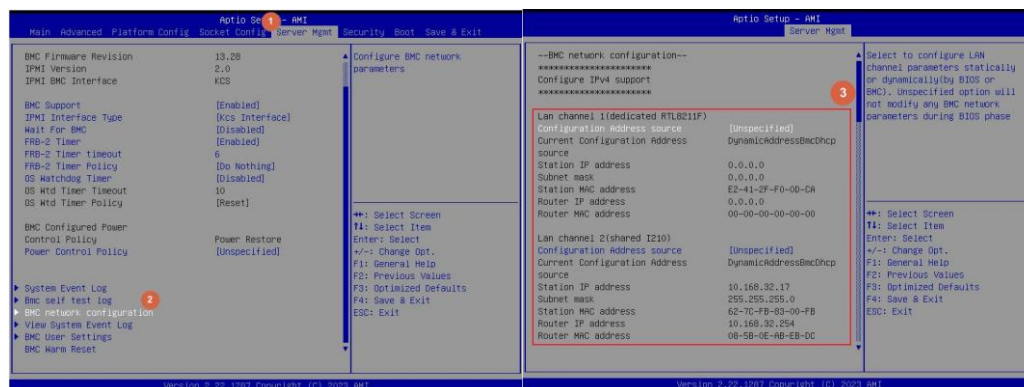

Back to safety

This server could not prove that it is **192.168.1.78**; its security certificate is not trusted by your computer's operating system. This may be caused by a misconfiguration or an attacker intercepting your connection.

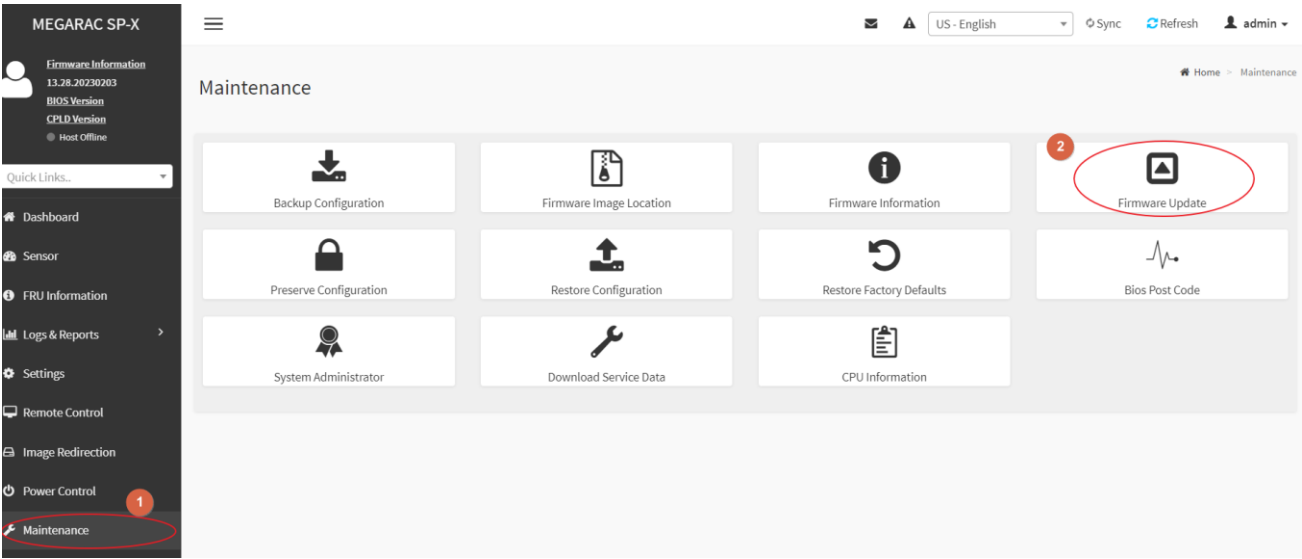

2

Proceed to 192.168.1.78 (unsafe)

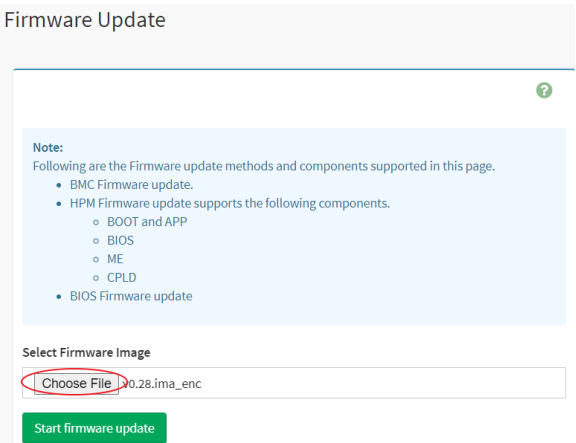

Note: BMC IP address can be configured at BIOS menu.

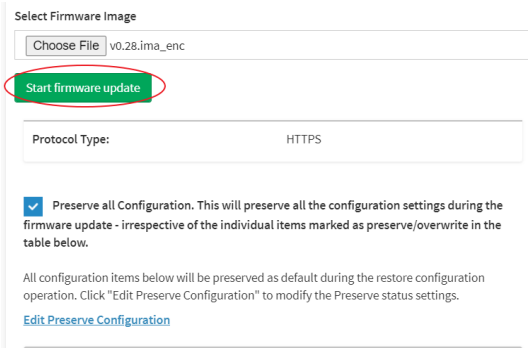

2. Click **Maintenance** and go to **Firmware Update**.

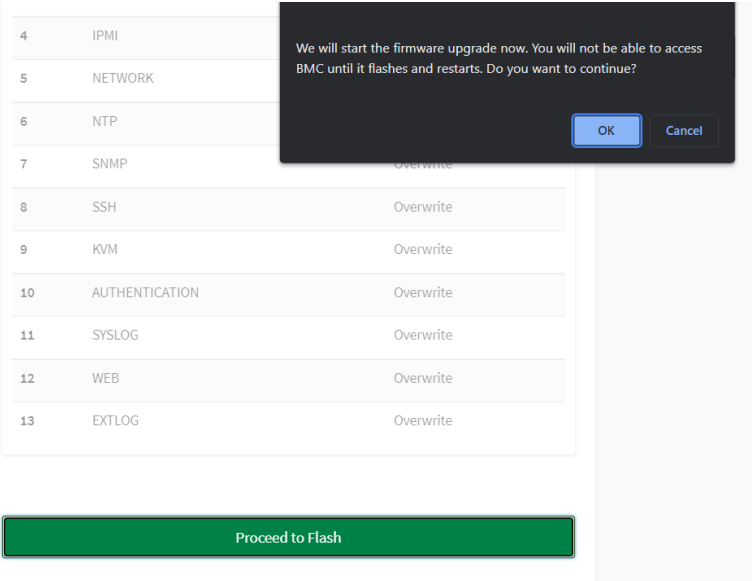

3. Choose **File** to select BMC file.

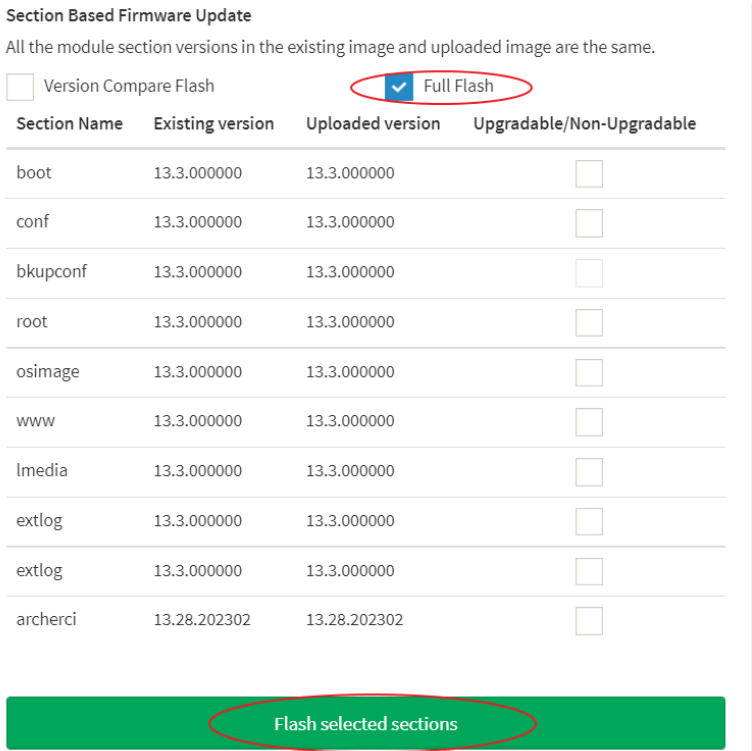

4. Click the **Start firmware update** button, then scroll down and check **Preserve all Configuration** if you'd like to preserve all configuration.

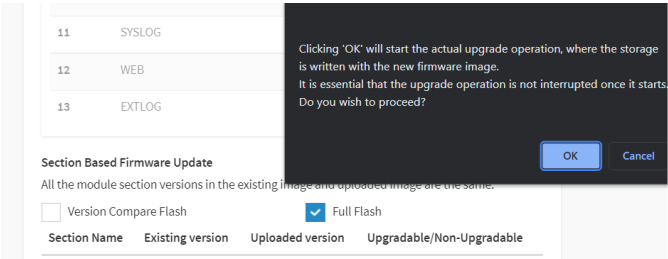

Click **Preceed to Flash**
The message box appears. Click **OK**.

Select **Full Flash**, and click **Flash selected sections**.

When the message box shows up, click **OK** again.

HPS-ERSD4A User’s Manual

5. The message appears, “Firmware reset has been called. Close this current session, and open a new session after a couple of minutes.”. Click **OK**.

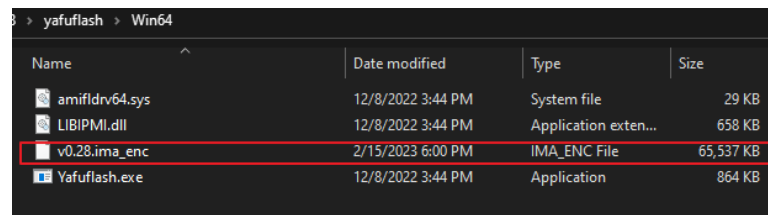

6. Login to check the BMC firmware version.

3.3 BMC update using IPMI tool

1. Make sure BMC file is saved in Win64 folder.

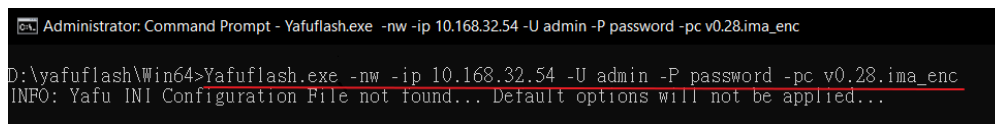

Name	Date modified	Type	Size
amifldr64.sys	12/8/2022 3:44 PM	System file	29 KB
LIBIPMI.dll	12/8/2022 3:44 PM	Application exten...	658 KB
v0.28.ima_enc	2/15/2023 6:00 PM	IMA_ENC File	65,537 KB
Yafuflash.exe	12/8/2022 3:44 PM	Application	864 KB

2. Open Command Prompt (admin).

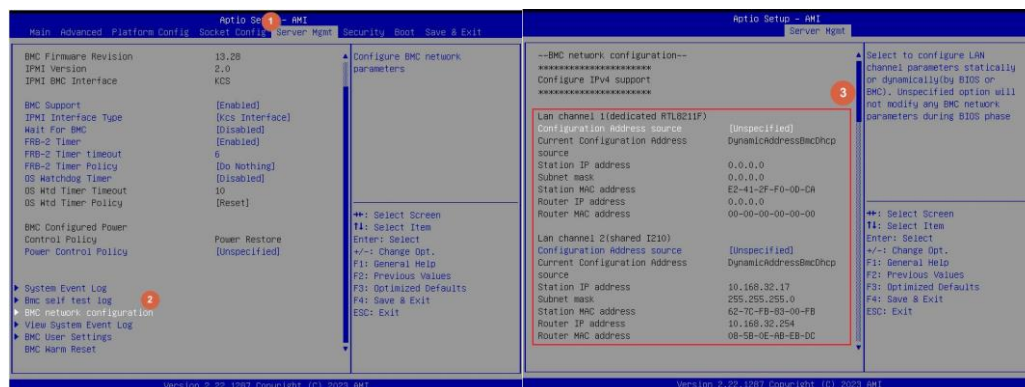

3. Input the command:

Yafuflash.exe -nw -ip [BMC IP address] -U [user name] -P [user password] -pc [BMC file name]. The default username and password are admin/admin.

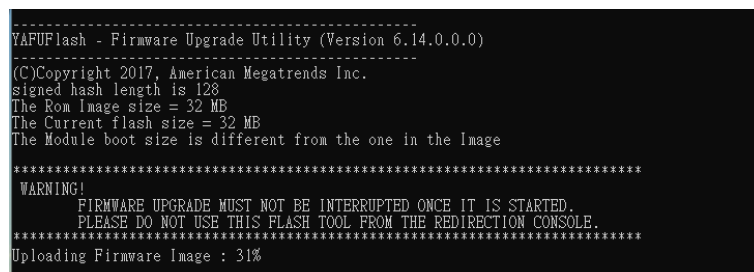

```
Administrator: Command Prompt - Yafuflash.exe -nw -ip 10.168.32.54 -U admin -P password -pc v0.28.ima_enc

APPENDIX-G SMART FAN CONFIGURATION

The OEM command bytes are organized according to the following format specification:

Byte 1	Byte 2	Byte 3:N
Function code	Cmd	Data

Where:

Function code **0x30** is the OEM function code.

Cmd Command code. This message byte specifies the operation that it to be executed.

Data Zero or more bytes of data, as required by given command.

OEM Command table

Description	Function code	Cmd	Data/Response data
Set Fan Mode	0x30	0x01	Input data: 0=standard speed , 1=manual speed
Get Fan Mode	0x30	0x30	Response data: 0=standard speed , 1=manual speed
Set fan PWM	0x30	0x35	[Fan] [PWM] Fan: 0 = CPU1_FAN 1 = Outlet_FAN1 2 = Outlet_FAN2 3 = SYS_FAN3 4 = SYS_FAN4 5 = Intel_FAN 6 = SYS_FAN6 7 = CPU2_FAN PWM: The PWM duty cycle 0x64 =100%
Get fan PWM	0x30	0x36	The response data represent each fan PWM. Byte1 = CPU1_FAN pwm duty cycle Byte2 = Outlet_FAN1 pwm duty cycle Byte3 = Outlet_FAN2 pwm duty cycle Byte4 = SYS_FAN3 pwm duty cycle Byte5 = SYS_FAN4 pwm duty cycle Byte6 = Intel_FAN pwm duty cycle Byte7 = SYS_FAN6 pwm duty cycle Byte8 = CPU2_FAN pwm duty cycle

The OEM commands can be run at local or remote console. Please refer next section.

Example

Locally set PWM of SYS_FAN2 to 0x20 by “ipmitool” in Linux OS.

Step 1. Set fan mode as Manual mode

```
~ # ipmitool raw 0x30 0x1 0x1  
01
```

Step 2. Set fan PWM

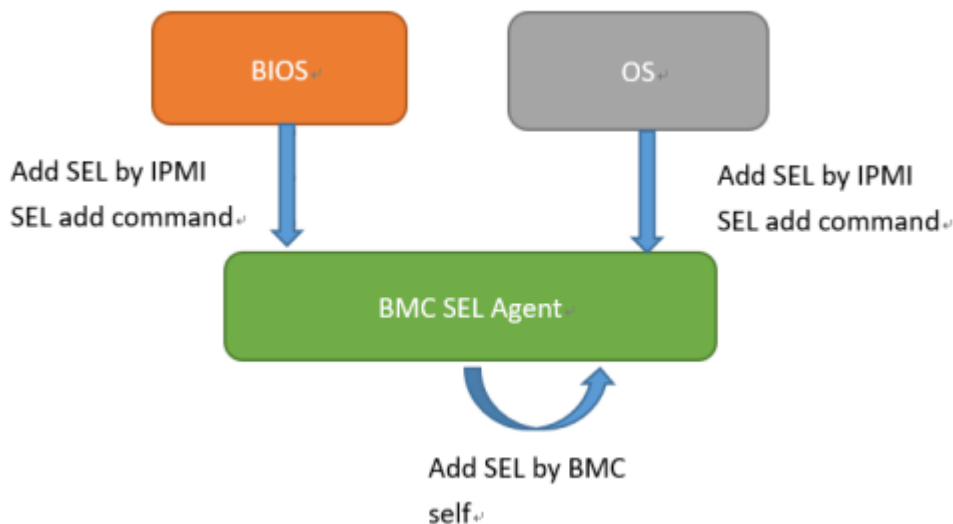

```
~ # ipmitool raw 0x30 0x35 0x2 0x20
```

APPENDIX-H SYSTEM EVENT LOG(SEL)

System Event Log (SEL)

The BMC provides a centralized, non-volatile repository for critical, warning, and informational system events called the System Event Log (SEL). By having the BMC manage the SEL and logging functions, it helps to ensure that “post-mortem” logging information is available if a failure occurs that disables the system. The SEL is saved in BMC flash and SEL size is 16k to 64k.

The BMC allows access to the SEL from in-band and out-band mechanisms. There are various tools and utilities that can be used to access the SEL including the BMC web UI, BIOS and multiple open sourced IPMI tools.

HPS-ERSD4A User's Manual

SEL format

The System Event Log (SEL) record format is defined in the IPMI specification. The following section provides a basic definition for each of the field in a SEL. For more details, see the IPMI specification.

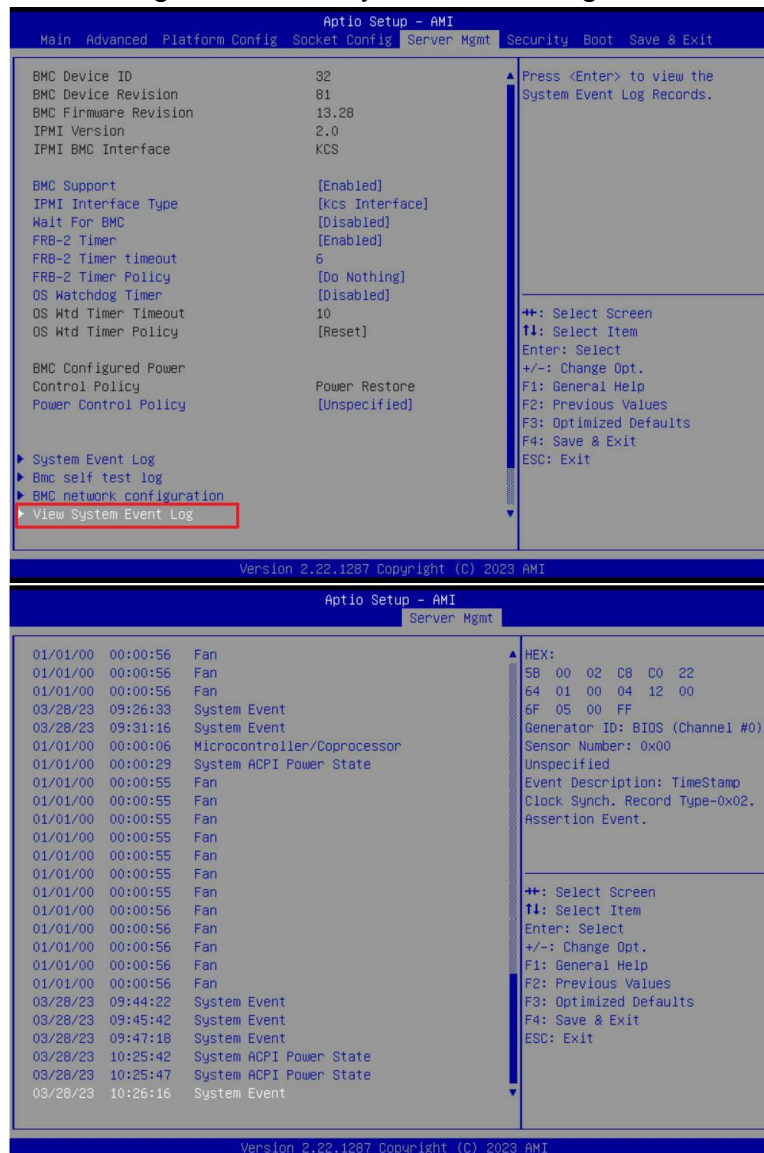

Byte	Field	Description
1, 2	Record ID (RID)	ID used for SEL record access.
3	Record Type (RT)	<p>[7:0] – Record type</p> <p>02h = System event record (default)</p> <p>C0h-DFh = OEM timestamped, bytes 8-16 OEM defined (see Table 3)</p> <p>E0h-FFh = OEM non-timestamped, bytes 4-16 OEM defined (see Table 4)</p>
4-7	Timestamp (TS)	<p>Time when the event was logged. The least significant byte is first.</p> <p>For example, TS:[29][76][68][4C] = 4C687629h = 1281914409 = Sun, 15 Aug 2010 23:20:09 UTC</p> <p>Note: There are various websites that convert the raw number to a date/time.</p>
8, 9	Generator ID (GID)	<p>RqSA and LUN if event was generated from IPMB.</p> <p>Software ID if event was generated from system software.</p> <p><i>Byte 1</i></p> <p>[7:1] – 7-bit I2C slave address, or 7-bit system software ID</p> <p>[0] – 0b = ID is IPMB slave address, 1b = System software ID</p> <p>Software ID values:</p> <p>0001h – BIOS POST for POST errors, RAS configuration/state, timestamp synch, OS boot events</p> <p>0033h – BIOS SMI handler</p> <p>0020h – BMC firmware (default)</p> <p>002Ch – Intel ME firmware</p> <p>0041h – Server management software</p> <p>00C0h – HSC firmware – HSBP A</p> <p>00C2h – HSC firmware – HSBP B</p> <p><i>Byte 2</i></p> <p>[7:4] – Channel number. Channel that event message was received over. 0h if the event message was received from the system interface, primary IPMB, or internally generated by the BMC.</p> <p>[3:2] – Reserved. Write as 00b.</p> <p>[1:0] – IPMB device LUN if byte 1 holds slave address. 00b otherwise.</p>
10	EvM Rev (ER)	<p>Event message format version.</p> <p>04h = IPMI v2.0 (default)</p> <p>03h = IPMI v1.0</p>
11	Sensor Type (ST)	Sensor type code for sensor that generated the event.
12	Sensor # (SN)	Number of sensor that generated the event (from SDR).
13	Event Dir/Event Type (EDIR)	<p><i>Event Dir</i></p> <p>[7] – 0b = Assertion event, 1b = Deassertion event.</p> <p><i>Event Type</i></p> <p>Type of trigger for the event; for example, critical threshold going high, state asserted, and so on. Also indicates class of the event; for example, discrete, threshold, or OEM. The Event Type field is encoded using the Event/Reading Type Code.</p> <p>[6:0] – Event Type Codes</p> <p>01h = Threshold (states = 0x00-0x0b)</p> <p>02h-0ch = Discrete</p> <p>6Fh = Sensor-specific</p> <p>70-7Fh = OEM</p>
14	Event Data 1 (ED1)	See Table 2.
15	Event Data 2 (ED2)	
16	Event Data 3 (ED3)	

When capturing the SEL log, always collect both the text/human readable version and the hex version. Because some of the data is OEM-specific, some utilities cannot decode the information correctly. In addition, with some OEM-specific data there may be additional variables that are not decoded at all.

3 ways to check SEL log

➤ BIOS setup

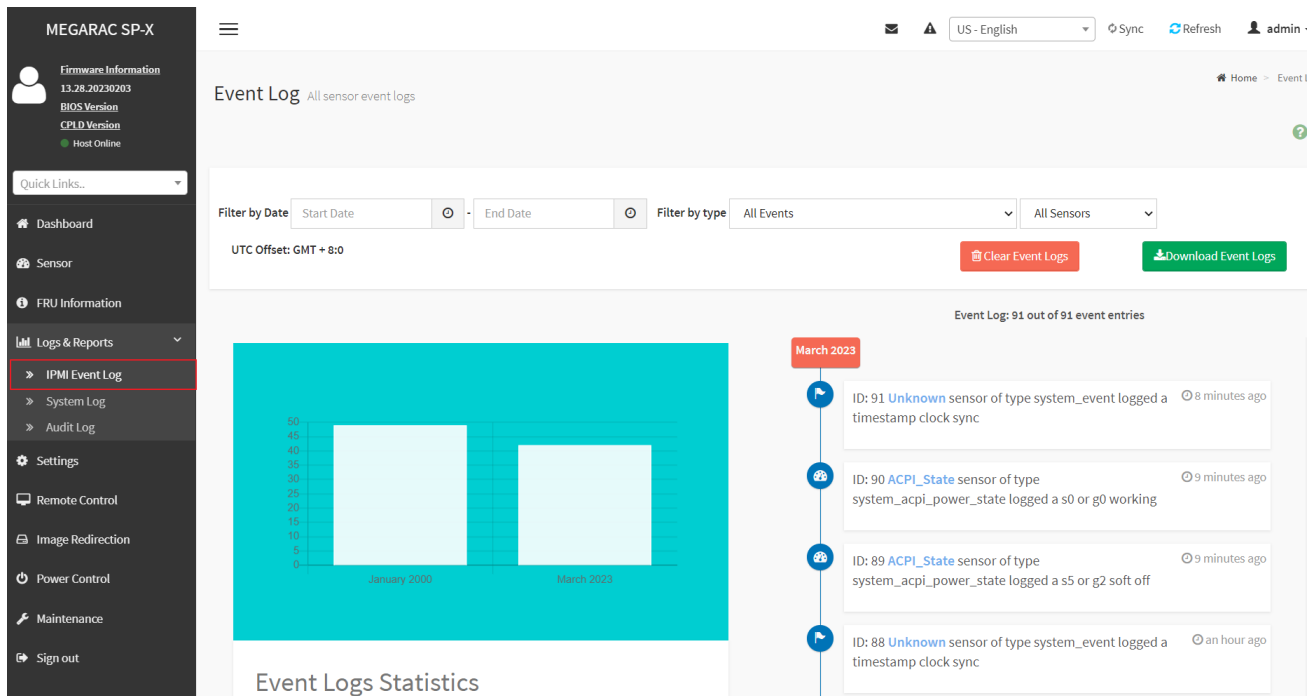

1. Power on and enter BIOS setup
2. Go to Server Mgmt => View System Event Log

HPS-ERSD4A User's Manual

➤ BMC Web

1. Login BMC web UI
2. Go to Logs & Reports >> IPMI Event Log

➤ IPMI tool

LAN (remote)

Linux:

```
ipmitool -I lanplus -H [BMC IP address] -U [user name] -P [user password] sel elist
```

Windows:

```
ipmiutil.exe sel -N [BMC IP address] -U [user name] -P [user password]
```

```
D:\Tools\BMC\ipmiutil-3.1.5-win32>ipmiutil.exe sel -N 192.168.1.78 -U ADMIN -P ADMIN
ipmiutil sel version 3.15
Connecting to node 192.168.1.78
-- BMC version 0.28, IPMI version 2.0
SEL Ver 37 Support 0f, Size = 3639 records (Used=426, Free=3213)

0004 09/30/21 13:52:09 INF BMC ACPI Power State #99 S4/S5 soft-off, no specific state 6f [06 ff ff]
```

KCS(local)

Linux:

ipmitool sel elist

Windows:

ipmiutil.exe sel

IPMI tools:

ipmitool: <https://github.com/ipmitool/ipmitool>

ipmiutil: <http://ipmiutil.sourceforge.net/>

Log Policy:

Linear Storage Policy

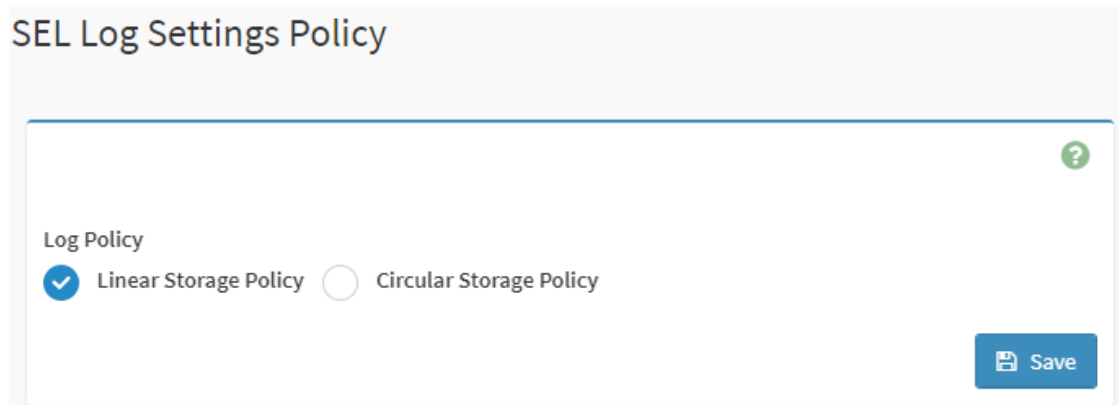

BMC will not overwrite log but inform user when the log size reach 70% and 100%.

Circular Storage Policy

BMC will overwrite log using FIFO (first-in-first-out) algorithm when log is full.

You can configure the log policy in Web-UI, and default setting is [Linear Storage Policy]

Settings → Log Settings → SEL Log Settings Policy

The screenshot shows a web interface titled "SEL Log Settings Policy". Inside a light gray box, there is a white panel with a blue border. At the top right of the panel is a green circular help icon with a white question mark. Below the title, the text "Log Policy" is followed by two radio button options: "Linear Storage Policy" (which is selected, indicated by a blue checkmark in the radio button) and "Circular Storage Policy" (which is unselected, indicated by an empty radio button). In the bottom right corner of the panel is a blue "Save" button with a white floppy disk icon.

APPENDIX-I IPMI TO GET BIOS POST CODE

OEM Message format

The OEM command bytes are organized according to the following format specification:

Byte 1	Byte 2	Byte 3:N
Function code	Cmd	Data

Where:

Function code **0x32** is the Get BIOS code OEM command, and default Privilege Level is User.

Cmd If you use “**ipmiutil**” tool in Windows OS, replace “0x32” with “00 20 C8”.
Command code. This message byte specifies the operation that it to be executed.

Data Zero or more bytes of data, as required by given command.

Get BIOS code Commands

This command is used the read BIOS code. The BIOS Code response length is 256 bytes for each block and total BIOS Code length supported to a maximum value of 512 Bytes.

NetFn	0x32
Command	0x73
Request Data	0h = Read first 256 bytes of Current BIOS code 1h = Read first 256 bytes of Previous BIOS code.

Example:

Locally get BIOS code by “ipmitool” in Linux.

Ipmitool raw 0x32 0x73 0

```
root@test-Default-string:/home/test# ipmitool raw 0x32 0x73 0
02 03 04 05 06 19 a1 a3 a3 a7 a9 a7 a7 a7 a8 a9
a9 aa ae af e1 e4 e3 e5 b0 b0 b0 b1 b1 b4 b2 b3
b3 b3 b6 b6 b6 b6 b6 b6 b7 b7 be b7 b7 b8 b8 b8
b8 b9 b9 b9 bb bb bb bb bb bb bb bb b7 bc bc
bc bc bc bf e7 e8 e9 eb ec ed ee 4f 61 9a 78 68
70 79 d1 d3 d4 91 92 94 94 94 94 94 94 94 94
94 94 94 95 96 ef 92 92 92 99 91 d5 92 92 92 92
97 98 9d 9c 92 b4 b4 b4 b4 b4 b4 b4 b4 b4 a0
a2 a2 a0 a2 a2 a2 a2 a2 a2 a2 99 92 92 92 ad
78 b1 a0 84 aa e3 e3 e3
```

The latest BIOS code is e3.

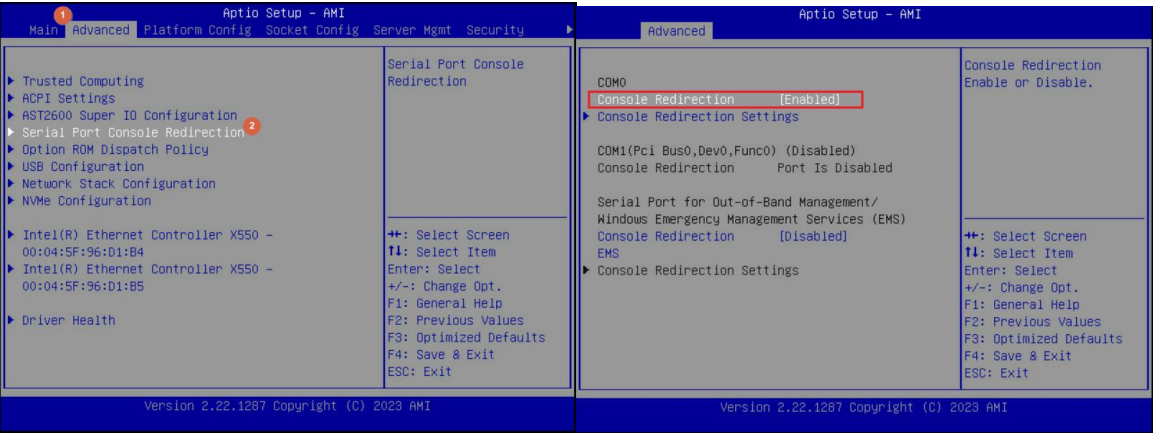

Remotely get BIOS code by “ipmiutil” in windows:

ipmiutil.exe cmd -N [BMC IP] -U [user name] -P [user password 00 20 c8 73 0]

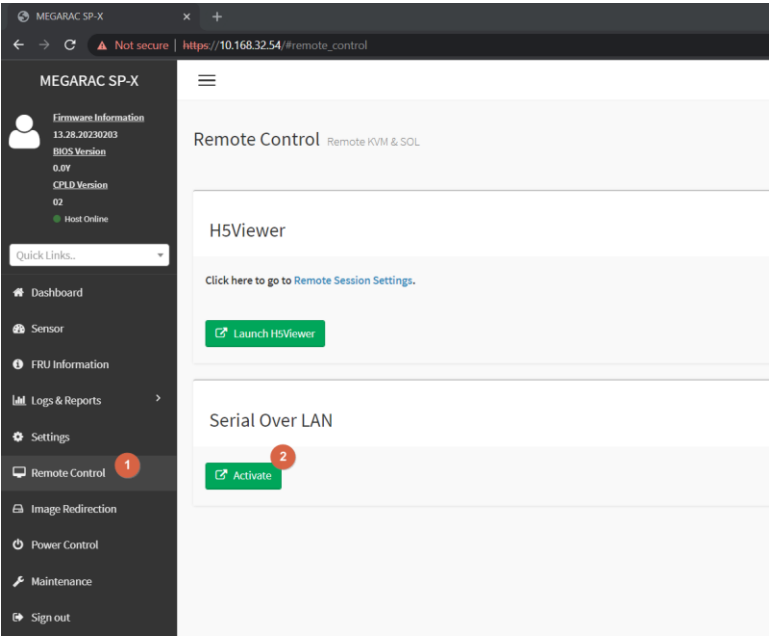

```
D:\Tools\BMC\ipmiutil-3.1.5-win32>ipmiutil.exe cmd -N 192.168.1.77 -U admin -P admin 00 20 C8 73 0
ipmiutil cmd ver 3.15
This is a test tool to compose IPMI commands.
Do not use without knowledge of the IPMI specification.

ipmiutil cmd, completed successfully
```

APPENDIX-J REMOTE CONTROL-Serial Over LAN

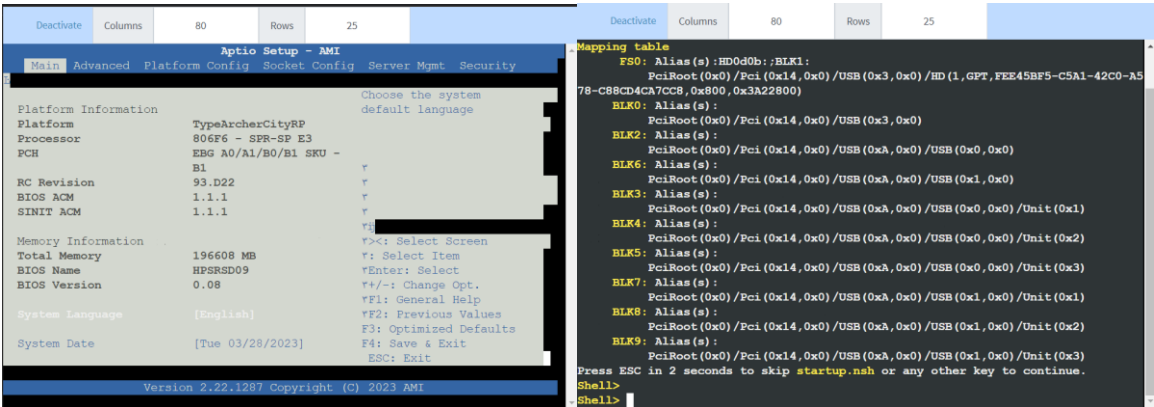

1. Enable **Serial Port Console Redirection** in BIOS setup menu.

2. Select the “Remote Control” page and the click [Serial Over LAN]. The browser will start to run **Serial Over LAN**.

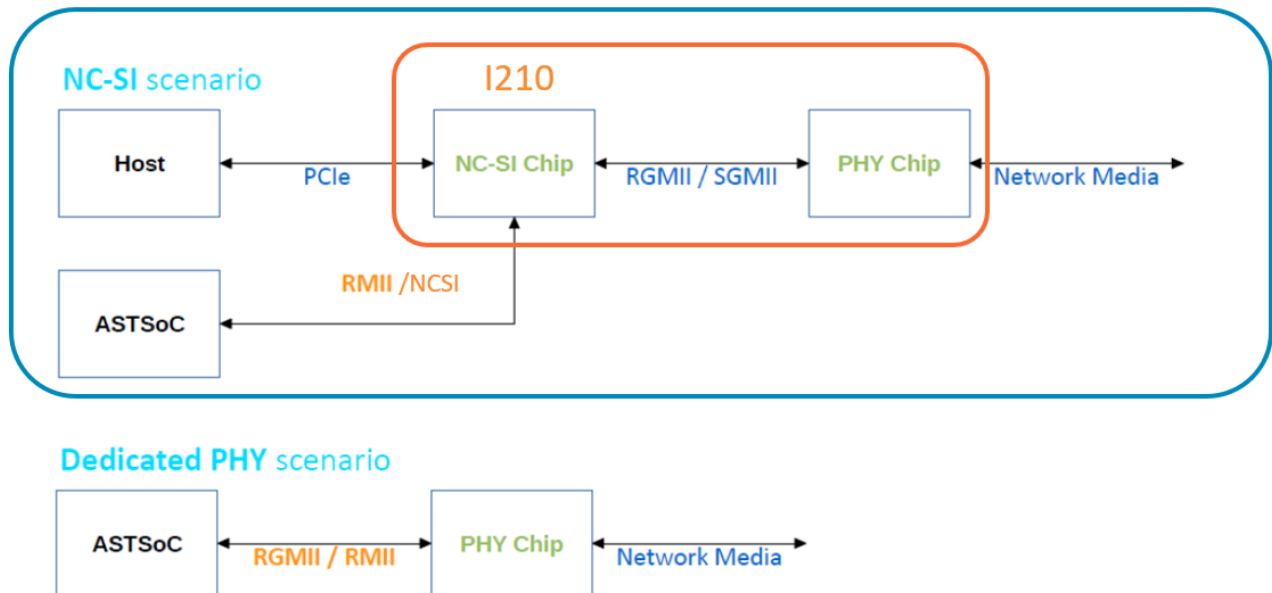

3. Access BIOS and UEFI shell in serial console.

APPENDIX-K Dedicated vs Shared IPMI port

Dedicated PHY scenario vs NC-SI(Shared) scenario

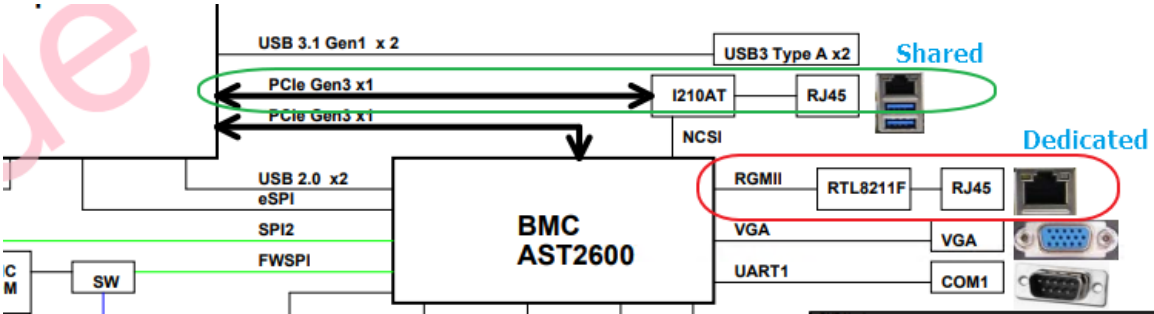

Network Controller Sideband Interface (NC-SI)

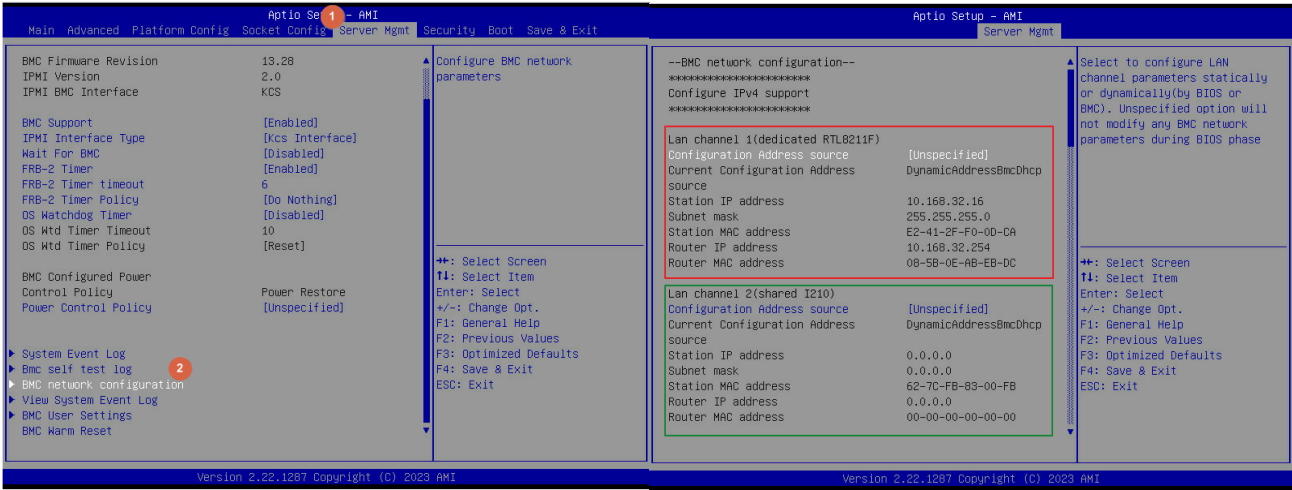

NC-SI, is an electrical interface and protocol defined by the Distributed Management Task Force (DMTF). The NC-SI enables the connection of a baseboard management controller (BMC) to network interface controllers (NICs) in a server computer system for the purpose of enabling out-of-band system management. This allows the BMC to use the network connections of the NIC ports for the management traffic, in addition to the regular host traffic.

The NC-SI defines a control communication protocol between the BMC and NICs.

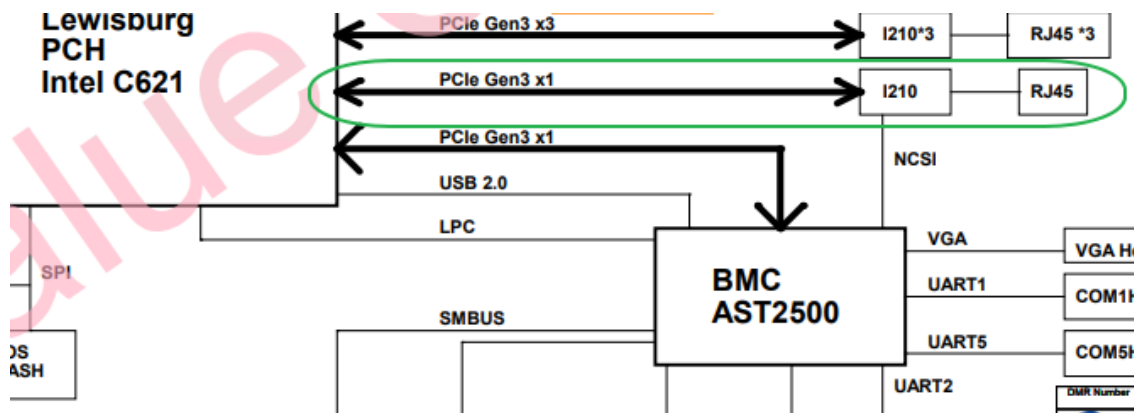

HPM-ERSDE

Both dedicated LAN and shared LAN can be configured in BIOS setup menu.

HPM-621 shared LAN

Q&A

1. Which one is recommended for BMC management?

A dedicated LAN is usually a local area network dedicated to server management. By establishing a private LAN connection between the server and the management computer, the administrator can access and manage the server without worrying about collisions or interference with other network traffic.

If you have a limited budget or space for network cabling, NC-SI may be a good option as it uses the existing network infrastructure. However, if you have security concerns, a dedicated LAN may be a better choice.

In summary, the choice between NC-SI and a dedicated LAN for BMC management depends on your specific needs, budget, and security requirements.

2. What is the bandwidth of dedicated LAN?

Bandwidth of dedicated LAN which is RTL8211F is 1000Mbps.
