Disclaimer

IBASE reserves the right to make changes and improvements to the products described in this document without prior notice. Every effort has been made to ensure the information in the document is correct; however, IBASE does not guarantee this document is error-free. IBASE assumes no liability for incidental or consequential damages arising from misapplication or inability to use the product or the information contained herein, nor for any infringements of rights of third parties, which may result from its use.

Trademarks

All the trademarks, registrations and brands mentioned herein are used for identification purposes only and may be trademarks and/or registered trademarks of their respective owners.

Compliance

CE

This product has passed CE tests for environmental specifications and limits. This product is in accordance with the directives of the European Union (EU). If users modify and/or install other devices in this equipment, the CE conformity declaration may no longer apply.

FC

AMS320 has been tested and found to comply with the limits for a Class B device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with manufacturer's instructions, may cause harmful interference to radio communications.

WEEE

This product must not be disposed of as normal household waste, in accordance with the EU directive of for waste electrical and electronic equipment (WEEE - 2012/19/EU). Instead, it should be disposed of by returning it to a municipal recycling collection point. Check local regulations for disposal of electronic products.

Green IBASE

This product is compliant with the current RoHS 2 restrictions and prohibits use of the following substances in concentrations exceeding 0.1% by weight (1000 ppm) except for cadmium, limited to 0.01% by weight (100 ppm).

- Hexavalent chromium: 1,000 ppm
- Poly-brominated biphenyls (PBBs): 1,000 ppm
- Poly-brominated diphenyl ethers (PBDEs): 1,000 ppm
- Cadmium: 100 ppm
- Mercury: 1,000 ppm
- Lead: 1,000 ppm
- Bis(2-ethylhexyl) phthalate (DEHP): 1,000 ppm
- Butyl benzyl phthalate (BBP): 1,000 ppm
- Dibutyl phthalate (DBP): 1,000 ppm
- Diisobutyl phthalate (DIBP): 1,000 ppm

Important Safety Information

Carefully read the precautions before using the device.

Environmental conditions:

- Lay the device horizontally on a stable and solid surface.
- Make sure you leave plenty of space around the device for ventilation.
- Use this product in environments with ambient temperatures $-10^{\circ}C \sim 50^{\circ}C$.
- Do not leave this device in an environment where the storage temperature may go below -20°c or above 80°c.

Care for your IBASE products:

- Before cleaning the device, turn it off and unplug all cables such as power in case a small amount of electrical current may still flow.
- Use neutral cleaning agents or diluted alcohol to clean the device chassis with a cloth. Then wipe the chassis with a dry cloth.
- Vacuum the dust with a computer vacuum cleaner to prevent the air vent or slots from being clogged.

Attention during use:

- Do not use this product near water.
- Do not spill water or any other liquids on your device.
- Do not place heavy objects on the top of the device.
- Operate this device from the type of power indicated on the marking label. If you are not sure of the type of power available, consult your distributor or local power company.
- Ensure that you apply correctly the power supply voltage.
- Do not walk on the power cord or allow anything to rest on it.
- If you use an extension cord, make sure that the total ampere rating of the product plugged into the extension cord does not exceed its limits.

Avoid Disassembly

It is advised to disassemble, repair or make any modification to the device. Disassembly, modification, or any attempt at repair could generate hazards and cause damage to the device, even bodily injury or property damage, and will void any warranty.

Danger of explosion if internal lithium-ion battery is replaced by an incorrect type. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

Warranty Policy

• IBASE standard products:

24-month (2-year) warranty from the date of shipment. If the date of shipment cannot be ascertained, the product serial numbers can be used to determine the approximate shipping date.

• 3rd-party parts:

12-month (1-year) warranty from delivery for the 3rd-party parts that are not manufactured by IBASE, such as CPU, memory, storage device, power adapter, panel and touchscreen.

 Products that fails due to misuse, accident, improper installation or unauthorized repair shall be treated as out of warranty and customers shall be billed for repair and shipping charges.

Technical Support & Services

- 1. Visit the IBASE website at <u>www.ibase.com.tw</u> to find the latest information about the product.
- 2. If you need any further assistance from your distributor or sales representative, prepare the following information of your product and elaborate upon the problem.
 - Product model name
 - Product serial number
 - Detailed description of the problem
 - The error messages in text or in screenshots if there is any
 - The arrangement of the peripherals
 - Software in use (such as OS and application software, including the version numbers)
- 3. If repair service is required, please log in to the RMA system of the website or contact your distributor or sales representative for assistance.

Chapter 1 General Information

The information provided in this chapter includes:

- Features
- Packing List
- Optional Accessories
- Specifications
- Product View
- Dimensions

1.1 Introduction

Designed for machine automation, industrial applications, and harsh environments, the fanless AMS320 embedded computer delivers high performance with low power consumption and operates within a temperature range from -10°C to 60°C with airflow. Engineered with a passive finned heat sink for efficient heat transfer, the AMS320 incorporates the MBE320 motherboard, powered by 11th Gen Intel® Core[™] i7/i5/i3 processors. It supports dual DDR4 SO-DIMM up to 64GB and features front removable drive bays for easy HDD/SSD replacement. The system includes six antenna ports and ensures robust connectivity through M.2 2230 E-Key and 3052 B-Key slots, supporting WLAN, 4G, and 5G modules.

AMS320

1.2 Features

- Compact fanless system with for IBASE MBE320 board
- 11th Gen Intel® Core™ i7/i5/i3 Processors
- Front removable drive bay for HDD/SSD
- Over/Under/Reverse voltage protection
- Supports DIN-rail mount & wall mount
- SoftWare TPM 2.0

1.3 Packing List

Your product package should include the items listed below. If any of the items below is missing, contact the distributor or the dealer from whom you purchased the product.

<u>AMS320</u>

•	AMS320	x 1
•	Terminal Block for DC-In Power Adapter (3-pin)	x 1
•	Terminal Block for Remote Power Button (2-pin)	x 1
•	Wall Mount Kit	x 1
•	Round Head Screw (for Wall Mount Kit)	x 4

1.4 Optional Accessories

- WiFi / Bluetooth antenna kit
- LTE / 5G antenna kit
- GPS antenna kit
- 24V/180W power adaptor

Unit: mm

Chapter 2 Hardware Configuration

The information provided in this chapter includes:

- Essential installations before you begin
- Information and locations of connectors

2.1 Hardware Installations

Remove and replace the bottom cover for the installation / replacement of memory module and M.2 socket devices. Release the 6 screws shown below.

2.1.1 Memory Installation / Replacement

- 1. After removing the bottom cover, locate the memory slots.
- 2. Press the ejector tab of the memory slot outwards with your fingertips.

- 3. Hold the memory module and align the key of the module with that on the memory slot.
- 4. Gently push the module in an upright position until the ejector tabs of the memory slot close to hold the module in place when the module touches the bottom of the slot.

To remove the module, press the ejector tabs outwards with your fingertips to eject the module.

2.1.2 M.2 Installation / Replacement

- 1. After removing the bottom cover, locate the M.2 sockets.
- 2. There are two M.2 sockets available on AMS320 (J17: E-Key and J9: B-Key), as shown in the picture below. Locate the desired socket to be used for installation/replacement of M.2 devices to proceed.

3. To install or replace a card, align the key of the card to the interface, and insert the card slantwise. Push the card down and fix it with a flat head screw.

2.1.3 SSD Installation

1. To install or replace the SSD, follow the instructions below.

Release 2 screws to pull out the SSD tray.

Remove/replace the four screws shown to remove or install the SSD.

2.1.4 WiFi / 4G / 5G Antenna Installation

Thread the WiFi / 4G / 5G antenna extension cable through an antenna hole of the front I/O cover and fasten the antenna as shown below. Then apply adhesive to the edge of the hex nut behind the front I/O cover to prevent the extension cable from falling if the cable becomes loose.

Info: The diameter of the nut is around 6.35 mm (0.25"-36UNC).

2.1.5 Mounting Installation

When mounting the AMS320 to any type of surface, ensure that you have enough room for power and signal cable routing, and have good ventilation. The method of mounting must be able to support weight of the device plus the suspension weight of all the cables to be attached to the system.

The AMS320 system comes with a set of wall mount kit and four round head screws that are to be used in securing the mounting brackets to the main unit, as shown in the picture below.

2.2 Jumper Setting

Set up and configure your device by using jumpers for various settings and features according to your needs and applications. Contact your supplier if you have doubts about the best configuration for your use.

Jumpers are short-length conductors consisting of several metal pins with a non-conductive base mounted on the circuit board. Jumper caps are used to have the functions and features enabled or disabled. If a jumper has 3 pins, you can connect either PIN1 to PIN2 or PIN2 to PIN3 by shorting.

A 3-pin jumper

A jumper cap

Pin	Oblique view	Illustration
Open		$\Box \bigcirc \bigcirc \\ 1 \ 2 \ 3 \\ \Box $
1-2 closed		□ ○ ○ 1 2 3
2-3 closed		□ • • 1 2 3

When two pins of a jumper are encased in a jumper cap, this jumper is **closed**, i.e. turned **On**.

When a jumper cap is removed from two jumper pins, this jumper is **open**, i.e. turned **Off**.

Chapter 3 Driver Installation

The information provided in this chapter includes:

- Intel[®] Chipset Software Installation Utility
- Graphics Driver Installation
- HD Audio Driver Installation
- LAN Driver Installation
- Intel[®] ME Drivers Installation
- Intel[®] Thunderbolt Drivers Installation

3.1 Introduction

This section describes the installation procedures for software drivers.

3.2 Intel[®] Chipset Software Installation Utility

The Intel[®] Chipset drivers should be installed first before the software drivers to install INF files for Plug & Play function for the chipset components. Follow the instructions below to complete the installation.

 Go to the download page of the product. Copy the compressed drivers file to your computer. Double click the file to decompress it. Run "CDGuide" to go to the main drivers page as shown. Click Intel and then Intel(R) TigerLake-U Chipset Drivers.

2. Click Intel(R) Chipset Software Installation Utility.

- 3. When the *Welcome* screen to the Intel[®] Chipset Device Software appears, click **Next** to continue.
- 4. Accept the terms in the software license agreement.
- 5. On the Readme File Information screen, click Install.

Intel(R) Chipset Device Software
<pre>* Product: Intel(R) Chipset Device Software * Package version: 10.1.18460.8229 * Installer version: 3.1.7.131 * Date: 07/17/2020 **********************************</pre>
NOTE: For the list of supported chipsets, please refer to the Release Notes
* CONTENTS OF THIS DOCUMENT This document contains the following sections:
1. Overview 2. System Requirements
Back Install Cancel

6. When Intel[®] Chipset Device Software has been completely installed, click **Finish** to complete the setup process.

3.3 Graphics Driver Installation

- 1. Click Intel and then Intel(R) TigerLake-U Chipset Drivers.
- 2. Click Intel(R) HD Graphics Driver.

- 3. When the *Welcome* screen appears, click **Next**.
- 4. Accept the terms in the license agreement and click Yes.
- 5. On the *Readme File Information* screen, click **Next**.

Refer to the Readme file below to view the system requirements and installation information.

Chapter 4 BIOS Setup

This chapter describes the different settings available in the AMI BIOS that comes with the board. The topics covered in this chapter are as follows:

- Introduction
- BIOS Setup
- Main Settings
- Advanced Settings
- Chipset Settings
- Security Settings
- Boot Settings
- Save & Exit Settings

4.1 Introduction

The BIOS (Basic Input/Output System) installed in the ROM of your computer system supports Intel® processors. The BIOS provides critical low-level support for standard devices such as disk drives, serial ports and parallel ports. It also provides password protection as well as special support for detailed fine-tuning of the chipset controlling the entire system.

4.2 BIOS Setup

The BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS ROM of the system stores the Setup utility. When you turn on the computer, the BIOS is immediately activated. Press the key immediately allows you to enter the Setup utility. If you are a little bit late pressing the key, POST (Power On Self Test) will continue with its test routines, thus preventing you from invoking the Setup.

If you still need to enter Setup, restart the system by pressing the "Reset" button or simultaneously pressing the <Ctrl>, <Alt> and <Delete> keys. You can also restart by turning the system Off and back On again.

The following message will appear on the screen:

Press to Enter Setup

In general, press the arrow keys to highlight items, <Enter> to select, the <PgUp> and <PgDn> keys to change entries, <F1> for help, and <Esc> to quit.

When you enter the BIOS Setup utility, the *Main Menu* screen will appear on the screen. The Main Menu allows you to select from various setup functions and exit choices.

Warning: It is strongly recommended that you avoid making any changes to the chipset defaults.

These defaults have been carefully chosen by both AMI and your system manufacturer to provide the absolute maximum performance and reliability. Changing the defaults could make the system unstable and crash in some cases.

4.3 Main Settings

Appendix

This section provides the mapping addresses of peripheral devices and the sample code of watchdog timer configuration.

- I/O Port Address Map
- Interrupt Request Lines (IRQ)
- Watchdog Timer Configuration

A. I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses which also becomes the identity of the device. The following table lists the I/O port addresses used.

Address	Device Description
0x00000A00-0x00000A0F	Motherboard resources
0x00000A10-0x00000A1F	Motherboard resources
0x00000A20-0x00000A2F	Motherboard resources
0x0000002E-0x0000002F	Motherboard resources
0x0000004E-0x0000004F	Motherboard resources
0x00000061-0x00000061	Motherboard resources
0x00000063-0x00000063	Motherboard resources
0x00000065-0x00000065	Motherboard resources
0x00000067-0x00000067	Motherboard resources
0x00000070-0x00000070	Motherboard resources
0x0000080-0x0000080	Motherboard resources
0x00000092-0x00000092	Motherboard resources
0x000000B2-0x000000B3	Motherboard resources
0x00000680-0x0000069F	Motherboard resources
0x0000164E-0x0000164F	Motherboard resources
0x0000EFA0-0x0000EFBF	Intel(R) SMBus - 06A3
0x000003F8-0x000003FF	Communications Port (COM1)
0x000002F8-0x000002FF	Communications Port (COM2)
0x000003E8-0x000003EF	Communications Port (COM3)
0x000002E8-0x000002EF	Communications Port (COM4)
0x00000020-0x00000021	Programmable interrupt controller
0x00000024-0x00000025	Programmable interrupt controller
0x00000028-0x00000029	Programmable interrupt controller
0x0000002C-0x0000002D	Programmable interrupt controller
0x00000030-0x00000031	Programmable interrupt controller

Address	Device Description
0x00000034-0x00000035	Programmable interrupt controller
0x00000038-0x00000039	Programmable interrupt controller
0x0000003C-0x0000003D	Programmable interrupt controller
0x000000A0-0x000000A1	Programmable interrupt controller
0x000000A4-0x000000A5	Programmable interrupt controller
0x000000A8-0x000000A9	Programmable interrupt controller
0x000000AC-0x000000AD	Programmable interrupt controller
0x000000B0-0x000000B1	Programmable interrupt controller
0x000000B4-0x000000B5	Programmable interrupt controller
0x000000B8-0x000000B9	Programmable interrupt controller
0x000000BC-0x000000BD	Programmable interrupt controller
0x000004D0-0x000004D1	Programmable interrupt controller
0x00001800-0x000018FE	Motherboard resources
0x000000F0-0x000000F0	Numeric data processor
0x00000000-0x00000CF7	PCI Express Root Complex
0x00000D00-0x0000FFFF	PCI Express Root Complex
0x00000040-0x00000043	System timer
0x00000050-0x00000053	System timer
0x00001854-0x00001857	Motherboard resources
0x00002000-0x000020FE	Motherboard resources
0x00003000-0x0000303F	Intel(R) UHD Graphics 630
0x00003090-0x00003097	Standard SATA AHCI Controller
0x00003080-0x00003083	Standard SATA AHCI Controller
0x00003060-0x0000307F	Standard SATA AHCI Controller

B. Interrupt Request Lines (IRQ)

Peripheral devices use interrupt request lines to notify CPU for the service required. The following table shows the IRQ used by the devices on board.

Level	Function
IRQ 4294967294	Intel(R) PCI Express Root Port #12 - 06B3
IRQ 16	High Definition Audio Controller
IRQ 4	Communications Port (COM1)
IRQ 3	Communications Port (COM2)
IRQ 7	Communications Port (COM3)
IRQ 6	Communications Port (COM4)
IRQ 13	Numeric data processor
IRQ 55~IRQ 204	Microsoft ACPI-Compliant System
IRQ 256 ~ IRQ 511	Microsoft ACPI-Compliant System
IRQ 4294967293	Intel(R) PCI Express Root Port #11 - 06B2
IRQ 4294967289	Intel(R) USB 3.1 eXtensible Host Controller - 1.10 (Microsoft)
IRQ 0	System timer
IRQ 45	Trusted Platform Module 2.0
IRQ 4294967290	Intel(R) UHD Graphics 630
IRQ 4294967292	Intel(R) PCIe Controller (x16) - 1901
IRQ 14	Intel(R) Serial IO GPIO Host Controller - INT3450
IRQ 4294967291	Standard SATA AHCI Controller
IRQ 4294967279~83	Intel(R) Ethernet Controller (3) I225-V
IRQ 4294967284~88	Intel(R) Ethernet Controller (3) I225-V #2
IRQ 4294967278	Intel(R) Management Engine Interface
IRQ 4294967294	Intel(R) PCI Express Root Port #12 - 06B3

C. Watchdog Timer Configuration

The Watchdog Timer (WDT) is used to generate a variety of output signals after a user programmable count. The WDT is suitable for the use in the prevention of system lock-up, such as when software becomes trapped in a deadlock. Under these sorts of circumstances, the timer will count to zero and the selected outputs will be driven.

Under normal circumstance, you will need to restart the WDT at regular intervals before the timer counts to zero.
