Warning!

This equipment generates uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, it may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

Electric Shock Hazard – Do not operate the machine with its back cover removed. There are dangerous high voltages inside.

Caution

Risk of explosion if the battery is replaced with an incorrect type.

Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.

Safety Precautions

Follow the messages below to prevent your systems from damage:

- ◆ Avoid your system from static electricity on all occasions.
- ◆ Prevent electric shock. Don't touch any components of this card when the card is power-on. Always disconnect power when the system is not in use.
- ◆ Disconnect power when you change any hardware devices. For instance, when you connect a jumper or install any cards, a surge of power may damage the electronic components or the whole system.

1.1 Features

- Intel Celeron N97 Processor(Alder Lake-N)
- 7" to 21.5" Industrial Compact Size Panel PC
- ARCHMI-S Series IP66 Compliant Aluminum Front Bezel
- Support 1 x DDR5-4800MHz SO-DIMM socket, up to 32GB
- Power Input: DC 9-36V
- Support Resistive touch screen (Model : R) and Projected Capacitive Multi-touch screen(Model : P)
- Support High Brightness LCD Version by SKU
- Fanless Design

1.2 Specifications

	ARCHMI-S-8XXC Series
System	
CPU	Intel Processor N97, 4C, 6MB cache, up to 3.6GHz,12W TDP Intel Atom™ x7425E, 4C, 6MB cache, up to 3.4GHz,12W TDP (option)

* To record power consumed when system has full loading with external devices attached.

* Power consumption may have 10% tolerance difference due to different MB, parts, test instrument, and so on.

* We suggest to use the adapter that APLEX approved. If you would like to adopt your own power supply or adapter, please add another 20-30% from the above power consumption to make sure the system can work stable.

1.7 Brief Description of ARCHMI-S-8XXC Series

ARCHMI-S-8XXC series products are a newly launched product line, ranging in size from 10.1" to 21.5". They feature a fanless, low-power, and compact design, making them suitable for use as HMI and control panels in smart production lines and self-service kiosks. With a protective aluminum enclosure, full-plane resistive touchscreen or projected capacitive multi-touchscreen technology, wireless capabilities, and multiple I/O options, the high-performance ARCHMI-S-8XXC series devices can also be integrated with a wide range of optional peripherals and accessories according to specific application requirements.

1.8 Installation of Memory and Storage

Step 1 : Remove screws from the bottom side of back chassis.

Step 2 : Push down back chassis from the system

Step 3 : Install memory module on the motherboard.
Install M.2 M-Key 2280 for SSD on motherboard.

Step 4 : Push the back cover latch into the back cover sliding rail.

Step 5 : Tighten the screws.

1.9 VESA Mounting

The ARCHMI-S-8XXC series support VESA 75/100 mount.

ARCHMI-S-807/808C : VESA 75, 4-m4 screw x 4 PCs

2. DDR5_1:

(SO-DIMM 260Pin slot) DDR5 memory socket, the socket is located at the top of the board and supports 260Pin 1.1V DDR5 SO-DIMM memory module up to 32GB.

Max Memory Size (dependent on memory type).

3. VBAT1:

(1.25mm Pitch 1x2 wafer Pin Header) 3.0V Li battery is embedded to provide power for CMOS.

Pin#	Signal Name
Pin1	VCC_RTC
Pin2	GND

4. CLR_CMOS1:

CMOS clear switch, CMOS clear operation will permanently reset old BIOS settings to factory defaults.

Procedures of CMOS clear:

- Turn off the system and unplug the power cord from the power outlet.
- To clear the CMOS settings, close CLR_CMOS1 for 1 second
- Power on the system again.
- When entering the POST screen, press the key to enter CMOS Setup Utility to load optimal defaults.
- After the above operations, save changes and exit BIOS Setup.

5. CPU_FAN1:

(1.25mm Pitch 1x2 wafer Pin Header) Fan connector, cooling fans can be connected directly for use.

Pin#	Signal Name
1	GND
2	VCC(5V_S0)

Note:

Output power of cooling fan must be limited under 3W.

6. DC_IN1:

(5.08mm Pitch 1x2 Pin Connector) DC9~36V System power input connector.

Pin#	Power Input
Pin1	DC_IN+ (DC+9V~36V)
Pin2	DC_IN- (Ground)

7. SMB:

(2.00mm Pitch 1x4 Pin Header) For SMBUS interface Device.

Pin#	Signals
1	GND
2	Data
3	Clock
4	Vcc 3.3V

8. LVDS/EDP:

(1.25mm Pitch 2x20 Connector, DF13-40P) Support 18/24-bit LVDS interface LCM with USB2.0 signal for touch screen.

3.9 How to Enroll Secure Boot Keys (PK, KEK, db) in BIOS/UEFI.

This document explains how to import Secure Boot keys into a UEFI firmware (BIOS). Procedures may vary slightly depending on the motherboard vendor, but the overall process is the same across most platforms supporting UEFI Secure Boot.

You must first obtain the Secure Keys (PK, KEK, db) from Microsoft.

After that, prepare a FAT32-formatted USB drive, UEFI firmware typically only reads key files from FAT32 file systems. Copy your secure keys (PK, KEK, db) to the root directory of the USB drive.

When boot up the unit, press DEL on the keyboard. Enter the BIOS menu and select the option shown in the image below.

Path: Security/Secure Boot Mode, and select “Custom”

Then select “Expert Key Management”

Select “Platform Key (PK)”, enter

Select “Update”

Select “No”

Find your USB drive to select your Keys (PK).

The image below shows that the Platform Key (PK) has already been successfully enrolled.

Select "Key Exchange Keys (KEK)", enter

Select “Update”

Select “No”

Find your USB drive to select your Key Exchange Keys (KEK).

The image below shows that the Key Exchange Keys (KEK) has already been successfully enrolled.

Select "Authorized Signatures (db)", enter

Select “Update”

Select “No”

Once the above steps are completed, the key enrollment process is finished.

To verify that Secure Boot is functioning properly in the Windows environment.

Search “System information” in Windows.

Right-click, and then select “Run as administrator”

Verify that Secure Boot State is shown as On, and PCR7 Configuration is listed as Binding Possible.

Thank you for going through this instruction. Following it will help you complete the setup smoothly.

Chapter 4 **Installation of Drivers**

This chapter describes the installation procedures for software and drivers under the windows 10. The software and drivers are included with the motherboard. The contents include Intel Chipset, Graphics chipset driver, Audio driver, LAN driver and Intel® management engine interface. The instructions are as below.

Important Note:

After installing your Windows operating system, you must install first the Intel Chipset Software Installation Utility before proceeding with the installation of drivers.

4.1 Intel Chipset

To install the Intel chipset driver, please follow the steps below.

Step 1. Here is welcome page. Please make sure you save and exit all programs before install. Click **Next**.

Step 2. Read the license agreement. Click **Accept** to accept all of the terms of the license agreement.

Step 3. Click **Install** to begin the installation.

Step 4. Select **Restart Now** to reboot your computer for the changes to take effect.

4.2 Intel® HD Graphics Chipset

To install the Intel® HD Graphics Chipset, please follow the steps below.

Step 1. Click **Begin installation**.

Step 2. Read the license agreement. Click **I agree** to accept all the terms of the license agreement.

Step 3. Choose **Install** function and Click **Start** to setup program.

Step 4. Click **Finish** to complete installation.

4.3 Intel® HD Graphics Chipset

To install the Realtek HD Audio Driver, please follow the steps below.

Step 1. Click **Next** to continue.

Step 2. Click **Yes, I want to restart my computer now.** Click **Finish** to complete the installation.

4.4 | LAN Driver

To install the LAN driver, please follow the steps below.

Step 1. Click **Zip File** to continue.

Step 3. Click **OK** to begin the installation.

Installing Drivers

Install or update drivers for Intel® Network Connections.

OK

Cancel

Step 4. Click **Close** to finish installation.

Installing Drivers

Drivers for Intel® Network Connections were successfully installed.

Close

4.5 Intel® Management Engine Interface

To install the Intel® Management Engine Interface, please follow the steps below.

Step 1. Select setup language you need. Click **Next** to continue.

Step 2. Choose **I accept the terms in the License Agreement** and click **Next** to begin the installation.

Step 3. Click **Next** to continue.

Step 4. Click **Finish** to complete the installation.

4.6 Touch Screen Installation

This chapter describes how to install drivers and other software that will allow your touch screen work with different operating systems.

4.6.1 Windows 10 Universal Driver Installation for PenMount 6000 Series

Before installing the Windows 10 driver software, you must have the Windows 10 system installed and running on your computer. You must also have one of the following PenMount 6000 series controller or control boards installed: PM6500, PM6300.

Resistive Touch

If you have an older version of the PenMount Windows 7 driver installed in your system, please remove it first. Follow the steps below to install the PenMount DMC6000 driver.

Step 1. Click **Next** to continue.

Step 2. Read the license agreement. Click **I Agree** to agree the license agreement.

Step 3. Choose the folder in which to install PenMount Windows Universal Driver. Click **Install** to start the installation.

Step 4. Click **Yes** to continue.

Step 5. Click **Finish** to complete installation.

4.6.2 Software Functions

Resistive Touch

Upon rebooting, the computer automatically finds the new 6000 controller board. The touch screen is connected but not calibrated. Follow the procedures below to carry out calibration.

1. After installation, click the PenMount Monitor icon “PM” in the menu bar.
2. When the PenMount Control Panel appears, select a device to “Calibrate.”

PenMount Control Panel (Resistive Touch)

The functions of the PenMount Control Panel are **Device**, **Multiple Monitors**, **Tools** and **About**, which are explained in the following sections.

Device

In this window, you can find out that how many devices be detected on your system.

Calibrate

This function offers two ways to calibrate your touch screen. 'Standard Calibration' adjusts most touch screens. 'Advanced Calibration' adjusts aging touch screens.

Standard Calibration	Click this button and arrows appear pointing to red squares. Use your finger or stylus to touch the red squares in sequence. After the fifth red point calibration is complete. To skip, press 'ESC'.
Advanced Calibration	Advanced Calibration uses 4, 9, 16 or 25 points to effectively calibrate touch panel linearity of aged touch screens. Click this button and touch the red squares in sequence with a stylus. To skip, press ESC'.

Step 1. Please select a device then click "Configure". You can also double click the device too.

Step 2.Click “Standard Calibration” to start calibration procedure

NOTE: The older the touch screen, the more Advanced Mode calibration points you need for an accurate calibration. Use a stylus during Advanced Calibration for greater accuracy. Please follow the step as below:

Step 3. Select **Device** to calibrate, then you can start to do **Advanced Calibration**.

NOTE: Recommend to use a stylus during Advanced Calibration for greater accuracy.

Plot Calibration Data	Check this function and a touch panel linearity comparison graph appears when you have finished Advanced Calibration. The blue lines show linearity before calibration and black lines show linearity after calibration.
Turn off EEPROM storage	The function disable for calibration data to write in Controller. The default setting is Enable.

Setting

Touch Mode	This mode enables and disables the mouse's ability to drag on-screen icons – useful for configuring POS terminals. Mouse Emulation – Select this mode and the mouse functions as normal and allows dragging of icons. Click on Touch – Select this mode and mouse only provides a click function, and dragging is disables.
Beep Sound	Enable Beep Sound – turns beep function on and off Beep on Pen Down – beep occurs when pen comes down Beep on Pen Up – beep occurs when pen is lifted up Beep on both – beep occurs when comes down and lifted up Beep Frequency – modifies sound frequency Beep Duration – modifies sound duration
Cursor Stabilizer	Enable the function support to prevent cursor shake.
Use press and hold as right click	You can set the time out and area for you need.

Edge Compensation

You can use Edge Compensation to calibrate more subtly.

About

This panel displays information about the PenMount controller and driver version.

Multiple Monitors

Multiple Monitors support from two to six touch screen displays for one system. The PenMount drivers for Windows 7/8/8.1 support Multiple Monitors. This function supports from two to six touch screen displays for one system. Each monitor requires its own PenMount touch screen control board, either installed inside the display or in a central unit. The PenMount control boards must be connected to the computer COM ports via the USB interface. Driver installation procedures are the same as for a single monitor. Multiple Monitors support the following modes:
Windows Extends Monitor Function
Matrox DualHead Multi-Screen Function
nVidia nView Function

NOTE: The Multiple Monitor function is for use with multiple displays only. Do not use this function if you have only one touch screen display. Please note once you turn on this function the rotating function is disabled.

Enable the multiple display function as follows:

1. Check the **Enable Multiple Monitor Support** box; then click **Map Touch Screens** to assign touch controllers to displays.

2. When the mapping screen message appears, click **OK**.
3. Touch each screen as it displays “Please touch this monitor”. Following this sequence and touching each screen is called **mapping the touch screens**.

4. Touching all screens completes the mapping and the desktop reappears on the monitors.
5. Select a display and execute the “Calibration” function. A message to start calibration appears. Click **OK**.

6. “Touch this screen to start its calibration” appears on one of the screens. Touch the screen.
7. “Touch the red square” messages appear. Touch the red squares in sequence.
8. Continue calibration for each monitor by clicking **Standard Calibration** and touching the red squares.

NOTES:

1. If you use a single VGA output for multiple monitors, please do not use the **Multiple Monitor** function. Just follow the regular procedure for calibration on each of your desktop monitors.
2. The Rotating function is disabled if you use the Multiple Monitor function.
3. If you change the resolution of display or screen address, you have to redo **Map Touch Screens**, so the system understands where the displays are.

Configuring the Rotate Function

1. Install the rotation software package.
2. Choose the rotate function (0°, 90°, 180°, 270°) in the 3rd party software. The calibration screen appears automatically. Touch this point and rotation is mapped.

NOTE: The Rotate function is disabled if you use Monitor Mapping
